

Table of Contents

List of Symbols	VII
Acknowledgements	XI
About the Author	XIII
1 Introduction	1
2 Fundamental Equations	7
Part I Irrotational Flow Motion of Ideal Fluid	
I-1 Introduction to Ideal Fluid Flows	17
I-2 Ideal Fluid Flows and Irrotational Flow Motion	29
I-3 Two-Dimensional Flows (1) Basic Equations and Flow Analogies	55
I-4 Two-Dimensional Flows (2) Basic Flow Patterns	81
I-5 Complex Potential, Velocity Potential and Joukowski Transformation	137
I-6 Joukowski Transformation, Theorem of Kutta-Joukowski and Lift Force on Airfoil	167
I-7 Theorem of Schwarz-Christoffel, Free Streamlines and Applications	185
Part II Real Fluid Flows: Theory and Applications	
II-1 Introduction	229
II-2 Turbulence: An Introduction	241
II-3 Boundary Layer Theory – Application to Laminar Boundary Layer Flows	265
II-4 Turbulent Boundary Layers	295

Appendix A	Glossary	331
Appendix B	Constants and Fluid Properties	357
Appendix C	Unit Conversions	363
Appendix D	Mathematics	367
Appendix E	The Software 2D Flow+	381
Appendix F	Whirlpools in the World	383
Appendix G	Examples of Civil Engineering Structures in the Atmospheric Boundary Layer	389
Appendix H	Boundary Shear Stress Measurements with Pitot Tubes	397
Assignment A	Application to the Design of the Alcyone 2	399
Assignment B	Applications to Civil Design on the Gold Coast	405
Assignment C	Wind Flow Past a Series of Circular Buildings	413
Assignment D	Prototype Freighter Testing	417
	References	421
	Citation Index	439
	Subject Index	441
	Suggestion/Correction Form	447
	Colour Plates	449
