Contents vii

1. Introduction 1

1.1. *Contributions* . . . 3

1.2. Organization of this thesis . . . 3

I. Fundamentals 7

2. Families of system configurations 9

2.1. Families of system configurations . . . 9

2.2. Variability . . . 11

2.2.1. Variable system characteristics . . . 11

2.2.2. Binding variability . . . 12

2.3. Modeling variability . . . 14

2.3.1. Known concepts . . . 14

2.3.2. The simple, orthogonal variability model (SOVM) . . . 18

2.4. Running Example . . . 22

2.5. Summary . . . 25

3. Configuration selection in system family verification 27

3.1. Single system verification . . . 27

3.1.1. Central terms . . . 28

3.1.2. Classification of verification methods . . . 29

3.1.3. Testing . . . 30

3.1.4. Conclusion . . . 44

3.2. Existing approaches in system family testing . . . 45

3.2.1. Known approaches in software product line testing . . . 45

3.2.2. Conclusion . . . 48

3.3. Existing approaches and challenges in configuration selection . . . 48

3.3.1. Choosing configurations based on a variability model . . . 49

3.3.2. *Choosing configurations based on coverage* . . . 50

3.3.3. Conclusion . . . 53

3.4. Summary . . . 53

II. Theory and algorithms for configuration selection 55

4. Locality set based configuration selection 57

4.1. Introduction of the method 58
4.1.1. Requirement based coverage for product families 58
4.1.2. Locality set based extrapolation 60
4.1.3. Selecting configurations based on locality sets 66
4.2. Extensions to the basic method 69
4.2.1. Considering risk and cost in locality set based configuration selection 71
4.2.2. Reducing verification effort by limiting verification width 75
4.2.3. Locality set based configuration selection in iterative development . . 75
4.3. Locality set based configuration selection compared to alternative approaches 77
4.3.1. Variability model based configuration selection versus locality set based 77
4.3.2. Coverage based versus locality set based configuration selection . . . 80
4.4. Scope of locality set based configuration selection 81
4.4.1. Locality set based configuration selection in verification 81
4.4.2. Evaluating system family design based on locality sets 82
4.5. Excursus: Extrapolation in test case selection for regression testing 82
4.6. Summary 84

5. Locality set identification 85

5.1. Family dependence graphs 86
5.1.1. Dependence analysis 86
5.1.2. *Single system dependence graphs* 86
5.1.3. Modeling variability within dependence graphs 94
5.2. Identification of locality sets from family dependence graphs 95
5.2.1. Identification of primary entities for requirements 96
5.2.2. Identification of locality sets for a system family 97
5.2.3. Reducing locality set size by limiting search depth 104
5.3. Summary 105

6. Algorithms for selecting configurations based on locality sets 107

6.1. GSC-CR: Greedy configuration selection covering configurations × requirements 108
6.1.1. The covering problem 108
6.1.2. The maximization problem 111
6.1.3. Conclusion 113

6.2. GSC-LR: Greedy selection of configurations covering locality sets × requirements . . . 114
6.2.1. Reformulating the optimization problems . . . 114
6.2.2. The covering problem . . . 114
6.2.3. The maximization problem . . . 117
6.2.4. Extensions to the basic method . . . 119
6.2.5. Conclusion . . . 122
6.3. GSL: Greedy selection of locality sets . . . 123
6.3.1. The covering problem . . . 123
6.3.2. The maximization problem . . . 126
6.3.3. Extensions to the basic method . . . 127
6.3.4. Conclusion . . . 128
6.4. Summary . . . 128

III. Evaluation and Discussion 131

7. Empirical evaluation 133

7.1. Comparing configuration selection strategies in terms of fault detection . . . 133
7.1.1. The mobilSoft demonstrator system family . . . 134
7.1.2. Experimental set-up . . . 139
7.1.3. Results . . . 145
7.1.4. Discussion . . . 153
7.1.5. Conclusions . . . 157
7.2. Empirical comparison of configuration selection algorithms . . . 158
7.2.1. System models and requirements . . . 158
7.2.2. Experimental set-up . . . 159
7.2.3. Results . . . 161
7.2.4. Discussion . . . 165
7.2.5. Conclusions . . . 165
7.3. Towards optimized configuration selection in a typical system test set-up . . . 166
7.3.1. Background . . . 167
7.3.2. Experimental set-up . . . 167
7.3.3. Achievable coverage based on a coarse grained system family model . 176
7.3.4. Discussion of factors which affect the achievable coverage . . . 177
7.3.5. Conclusions . . . 186
7.4. Summary . . . 188

8. Design implications of configuration selection **191**

8.1. Verifiability and configuration selection 191

8.2. Family design aspects which influence verification effort 192

8.2.1. Locality set based partitioning 193

8.2.2. Family design aspects which influence configuration space partitioning 198

8.2.3. Conclusion 202

8.3. Summary 203

9. Conclusions **205**

Glossary **209**

Index **213**

Bibliography **215**
