Contents

1 **Introduction** 1

2 **Distribution of Pore-Fluid Pressure Gradient in the Crust with Temperature Neglected** 7
2.1 The Crust Comprised of a Single Homogeneous Layer 7
2.2 The Crust Comprised of Two Homogeneous Layers 10
2.3 The Crust Comprised of Three Homogeneous Layers 13
2.4 The Critical Crustal Thickness for a Hydrostatic Pore-Fluid Pressure Gradient 15

3 **Pore-Fluid Pressure Gradients in the Crust with Heat Conduction and Advection** 17
3.1 The Effect of Heat Conduction on the Distribution of Pore-Fluid Pressure Gradients 18
3.2 The Effect of Heat Conduction and Advection on the Distribution of Pore-Fluid Pressure Gradients 21

4 **Convective Heat Transfer in a Homogeneous Crust** 27
4.1 Convective Heat Transfer in a Homogeneous Crust without Upward Throughflow 28
4.2 Convective Heat Transfer in a Homogeneous Crust with Upward Throughflow 36

5 **Convective Heat Transfer in a Heterogeneous Crust** 49
5.1 The Influence of Layered Material Heterogeneity on Convective Heat Transfer in a Heterogeneous Crust 49
5.2 The Influence of Material Thermoelasticity on Convective Heat Transfer in a Heterogeneous Crust 59
5.3 The Influence of Pore-Fluid Viscosity on Convective Heat Transfer in a Heterogeneous Crust 71
5.3.1 Statement of the Problem 72
5.3.2 Derivation of Analytical Solutions 75

6 Pore-Fluid Focusing within Two-Dimensional Faults and Cracks of Crustal Scales with No Temperature Effects: Solutions Expressed in a Local Coordinate System 83
6.1 Description of the Problem 84
6.2 Derivation of Governing Equations of the Problem in a Local Elliptical $\xi\eta$ Coordinate System 86
6.3 Derivation of Analytical Solutions when the Long Axis of an Elliptical Inclusion Is Parallel to the Inflow in the Far Field 89
6.4 Derivation of Analytical Solutions when the Short Axis of an Elliptical Inclusion Is Parallel to the Inflow in the Far Field 93
6.5 Derivation of Analytical Solutions when the Inflow of the Far Field Is Parallel to the *X* Direction of the Global *XY* Coordinate System 96
6.6 Derivation of Analytical Solutions when the Inflow of the Far Field Is Parallel to the *Y* Direction of the Global *XY* Coordinate System 99
6.7 Application Examples of the Present Analytical Solutions for Pore-Fluid Focusing Factors within Inclined Elliptical Inclusions 101

7 Pore-Fluid Focusing within Two-Dimensional Faults and Cracks of Crustal Scales with No Temperature Effects: Solutions Expressed in a Global Coordinate System 109
7.1 Derivation of Inverse Mappings between the Elliptical and the Cartesian Coordinate Systems 109
7.2 The Long Axis of an Elliptical Inclusion Is Parallel to the Inflow in the Far Field 111
7.3 The Short Axis of an Elliptical Inclusion Is Parallel to the Inflow in the Far Field 114
7.4 The Inflow of the Far Field Is Parallel to the *X* Direction of the Global *XY* Coordinate System 117
7.5 The Inflow of the Far Field Is Parallel to the *Y* Direction of the Global *XY* Coordinate System 119
7.6 Application Examples of the Present Analytical Solutions 121

8 Pore-Fluid Flow Focused Transient Heat Transfer within and around Two-Dimensional Faults and Cracks of Crustal Scales 133
8.1 Statement of the Problem 134
8.2 Validation of the Numerical Models 136
8.3 Numerical Simulation Results 138

9 Convective Heat Transfer within Three-Dimensional Vertical Faults Heated from Below 145
9.1 Statement of the Problem 146
9.2 Analysis of Convective Instability of the Fault Zone System 150
9.3 Possibility of Convective Flow in Geological Fault Zone Systems . 156

10 Convective Heat Transfer within Three-Dimensional Inclined Faults Heated from Below 161
10.1 Governing Equations of the Problem 163
10.2 Analysis of Convective Instability of Pore-Fluid Flow in an Inclined Three-Dimensional Fault Zone System 167
10.3 Effect of the Dip Angle on Convective Instability of an Inclined Three-Dimensional Geological Fault Zone 174

11 Double-Diffusion Driven Convective Heat Transfer within Three-Dimensional Vertical Faults Heated from Below 179
11.1 Governing Equations of the Problem 180
11.2 Analysis of Double-Diffusion Driven Convective Instability for Three-Dimensional Fault Zones 186
11.3 The Possibility of Double-Diffusion Driven Convective Flow in Three-Dimensional Geological Fault Zones 192

12 Convection Induced Ore Body Formation and Mineralization within the Upper Crust of the Earth 195
12.1 Statement of the Problem and the Concept of Mineralization Rate . 197
12.2 Precipitation and Dissolution of Zinc, Lead and Iron in Hydrothermal Systems 201
