Preface	vii
1 Another Book on Heritability?	1
1.1 Personality and social attitudes	1
1.2 Away from the “heritability hang-up”	2
1.3 Presentation of original data	4
1.4 Quantitative modeling and hypothesis testing	4
1.5 Sustained study of selected measures	6
2 Dimensions of Personality	7
2.1 Theories of personality	7
2.2 The description of personality	8
2.3 Testing the model for personality	10
2.3.1 Consistency across measurements	10
2.3.2 Cross-cultural consistency	11
2.3.3 Animal models	11
2.3.4 Developmental consistency	12
2.3.5 Relationship to psychiatric disorder and social behavior ...	13
2.4 Criticisms of the model	14
2.4.1 Criticism of trait theories	14
2.4.2 Nomothetic vs. idiographic methods	15
2.4.3 Inability to explain social behavior	15
2.5 Causal aspects of the theory	16
2.6 Heuristic value	17
3 The Classical Approach: Early Twin Studies of Personality	19
3.1 History of the twin method	19
3.1.1 Hereditary genius	19
3.1.2 The history of twins	19

3.2	Analyzing twin data: The classical approach	21
3.2.1	Analysis of variance	21
3.2.2	Genetic and environmental components within families	22
3.2.3	The intraclass correlation and twin similarity	24
3.3	The shared environment in the classical approach	26
3.4	Criticism of the twin method	28
3.4.1	Additional types of twins?	28
3.4.2	Are twins typical?	29
3.4.3	Correlations in the environments of twins	29
3.5	Twin studies of personality before 1976	31
3.6	Power and sample size	35
3.7	Early twin studies: a "meta-analysis"	37
3.8	Summary	41
4	Introduction to Model Fitting	45
4.1	What's wrong with the old way?	45
4.2	Model building	47
4.2.1	Genotype and phenotype	47
4.2.2	Genotype \times environment interaction	48
4.2.3	Genotype-environment covariance: the genetic environment	50
4.2.4	The number of genes	51
4.2.5	Gene action and interaction	54
4.2.6	The forgotten environment	58
4.3	Model fitting	59
4.3.1	Criteria for a "good" model	59
4.3.2	Rationale of model-fitting methods	61
4.3.3	Weighted least squares applied to twin mean squares	62
4.3.4	Fitting a simple non-linear model to correlations	67
4.4	Summary	71
5	Adult Twin Studies of the Major Personality Dimensions	73
5.1	The London data	74
5.1.1	Ascertainment	74
5.1.2	Zygoty determination	77
5.1.3	Transformation of the raw scores	79
5.1.4	Age correction	83
5.1.5	Correction for sex differences	84
5.1.6	Data summary	85
5.1.7	Fitting models without sex limitation	86
5.1.8	Method	91
5.1.9	Results	92
5.1.9.1	Psychoticism	92

5.1.9.2 Extraversion	94
5.1.9.3 Neuroticism	95
5.1.9.4 The Lie scale	96
5.1.10 Models incorporating sex-limited effects	97
5.1.11 Allowing for sex limitation	99
5.1.12 Conclusions from the adult London twin data	101
5.2 The US study	103
5.3 The Swedish study	107
5.4 The Australian study	111
5.4.1 Psychoticism	113
5.4.2 Extraversion	114
5.4.3 Neuroticism	117
5.4.4 The Lie scale	119
5.5 Summary and discussion	120
6 Further Tests of the Model: Studies of Adoptees and Extended Families	123
6.1 Assortative mating for the dimensions of personality	123
6.2 Adoptions and extended kinships: the London study	125
6.2.1 Source of data	125
6.2.2 The correlations between relatives	126
6.2.3 Inclusion of cultural inheritance and assortative mating ...	130
6.2.4 Minimization subject to constraints	138
6.2.5 Results of correlational analysis	139
6.2.6 Model fitting to unreduced data by maximum-likelihood ..	141
6.2.7 Results of maximum-likelihood analysis	143
6.3 The extended kinships of twins	149
6.4 Separated twins	151
6.5 Other adoption studies of extraversion and neuroticism	157
6.6 Summary	159
7 Personality Development and Change: A Genetic Perspective ..	161
7.1 Analysis of P,E,N and L in juvenile twins	163
7.1.1 Psychoticism	165
7.1.2 Extraversion	166
7.1.3 Neuroticism	167
7.1.4 The Lie scale	167
7.2 The causes of developmental stability and change	168
7.2.1 The model	170
7.2.2 Data summary	171
7.2.3 Method for model fitting	175
7.2.4 Results for the genotype-environment model	176
7.2.4.1 Neuroticism	178

7.2.4.2	Extraversion	179
7.2.4.3	Psychoticism	181
7.2.4.4	The Lie scale	186
7.3	Developmental changes in gene expression in adults	192
7.3.1	Age trends in intrapair twin differences	192
7.3.2	Extended kinships: a developmental model	193
7.4	Stability and change in personality	197
8	The Genetic Analysis of Individual EPQ Items	201
8.1	The data	203
8.2	Models	205
8.3	Estimation	209
8.4	Example	211
8.5	Results	212
8.5.1	Psychoticism	212
8.5.2	Extraversion	212
8.5.3	Neuroticism	217
8.5.4	The Lie scale	217
8.6	Relationships between items and factors	220
8.7	Discussion and summary	228
9	The Specificity of Gene Effects: Implications for the Interaction of Persons and Situations	231
9.1	Personality traits and persons \times situations interaction	231
9.2	The data	235
9.3	Analysis of variance	236
9.4	Genetic analysis	239
9.5	Do genes affect short-term personality change?	240
9.6	Discussion	243
10	Genetic and Environmental Covariance Between Traits	245
10.1	Genetic and environmental covariance: a bivariate study	246
10.1.1	A bivariate model for genetic and environmental effects ..	246
10.1.2	Summarizing multivariate twin data	248
10.2	A bivariate example: the nature of extraversion	250
10.2.1	Data and data summary	251
10.2.2	Model fitting to component scores	254
10.2.3	The causes of correlation between the scales	257
10.3	The components of impulsiveness	259
10.3.1	Models for more than two variables	259
10.3.2	The measurements and sample	261
10.3.3	Data summary	262

10.3.4	The model	264
10.3.5	Statistical method for testing the model	267
10.3.6	Results	268
10.3.7	Discussion	270
10.4	The covariance structure of neuroticism	273
10.4.1	Data summary	274
10.4.2	Univariate analysis	274
10.4.3	Multivariate analysis	277
10.5	Conclusion	281
11	Normal Personality and Symptoms of Psychiatric Disorder : A Genetic Relationship?	283
11.1	The threshold model for individual symptoms	286
11.2	Testing genetic models for liability with multiple items	293
11.2.1	The psychometric model	295
11.2.2	The genetic model	296
11.2.3	Application to twin data on symptoms of depression	299
11.2.4	Numerical method	300
11.2.5	Results and discussion	301
11.3	The relationship between personality and symptoms	302
11.4	Correlation between individual symptoms: a genotype- environmental model	307
11.5	Summary	313
12	Social Attitudes: A Model of Cultural Inheritance?	315
12.1	Analysis of attitude items from the London study	316
12.1.1	Preliminary statistics	316
12.1.2	Twin correlations for the items	316
12.1.3	Item analysis using the threshold model	319
12.2	Conservatism items in the Australian sample	327
12.2.1	Questionnaire and preliminary statistics	327
12.2.2	Fitting the threshold model	328
12.2.3	Factor loadings and the shared environment	331
12.3	Summary and conclusions	334
13	Conservatism-Radicalism: The Structure of Social Attitudes ...	337
14	Twin Studies of Social-Attitude Dimensions	357
14.1	Twin studies of conservatism	359
14.2	Conservatism in the Australian twin sample	361
14.3	The causes of longitudinal consistency in conservatism	364

14.4	Analysis of primary social-attitude factors	368
14.5	Summary	373
15	Attitudes: Cultural Inheritance or Assortative Mating?	375
15.1	A joint analysis of spousal resemblance for personality and attitudes	375
15.2	The structure of spousal resemblance in attitudes	376
15.3	Resolving assortative mating and cultural inheritance	380
15.4	Other data	386
15.5	Summary	387
16	Testing Assumptions About Mate Selection	389
16.1	Alternative models for mate selection	389
16.2	Assortative mating for environmental determinants	391
16.2.1	Unreliable environmental transmission	391
16.2.2	Reliable environmental transmission	393
16.3	A study of twins and their spouses	394
16.3.1	The data	394
16.3.2	A model	395
16.3.3	Results of model fitting	398
16.4	Summary	401
17	Genes, Culture and Behavior	403
17.1	Genetic effects on the major dimensions	403
17.2	The environment	406
17.3	Assortative mating	407
17.4	Developmental change	408
17.5	Multiple variables	410
17.6	Personality and psychiatric symptoms	410
17.7	Where next?	411
17.7.1	Theory	411
17.7.2	Data	413
17.8	Conclusion	415
	Appendices	417
A.	Example SAS program for iterative weighted least squares analysis of twin mean squares	419
B.	The Eysenck Personality Questionnaire (EPQ)	420
C.	The Junior Eysenck Personality Questionnaire (JEPQ)	424
D.	The Public Opinion Inventory (POI)	427

<i>Contents</i>	xvii
E. Item means by Twin Group for the POI items	430
F. Item variances by Twin Group for the POI items	432
References	435
Subject Index	453
