Preface v

I Probability theory 1
- I.1 Probability spaces . . . 1
- I.2 Stochastic variables . . . 9
- I.3 Product measures and statistical independence . . . 13
- I.4 Functions of stochastic vectors . . . 18
- I.5 Expectation, variance and covariance of stochastic variables . . . 21
- I.6 Statistical independence of normally distributed variables . . . 30
- I.7 Distribution functions and probability distributions . . . 38
- I.8 Moments, moment generating and characteristic functions . . . 42
- I.9 The central limit theorem . . . 48
- I.10 Transformation of probability densities . . . 53
- I.11 Exercises . . . 55

II Statistics and their probability distributions, estimation theory 65
- II.1 Introduction . . . 65
- II.2 The gamma distribution and the χ^2-distribution . . . 69
- II.3 The t-distribution . . . 79
- II.4 Statistics to measure differences in mean . . . 83
- II.5 The F-distribution . . . 89
- II.6 The beta distribution . . . 94
- II.7 Populations that are not normally distributed . . . 99
- II.8 Bayesian estimation . . . 102
- II.9 Estimation theory in a framework . . . 111
- II.10 Maximum likelihood estimation, sufficiency . . . 129
- II.11 Exercises . . . 140

III Hypothesis tests 155
- III.1 The Neyman–Pearson theory . . . 155
- III.2 Hypothesis tests concerning normally distributed populations . . . 168
- III.3 The χ^2-test on goodness of fit . . . 182
- III.4 The χ^2-test on statistical independence . . . 188
- III.5 Exercises . . . 194

Bibliografische Informationen
http://d-nb.info/991613279

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

IV Simple regression analysis 200
IV.1 The least squares method . . . 200
IV.2 Construction of an unbiased estimator of σ^2 . . . 210
IV.3 Normal regression analysis . . . 213
IV.4 Pearson's product-moment correlation coefficient . . . 219
IV.5 The sum of squares of errors as a measure of linear structure . . . 222
IV.6 Exercises . . . 225

V Normal analysis of variance 229
V.1 One-way analysis of variance . . . 229
V.2 Two-way analysis of variance . . . 236
V.3 Exercises . . . 246

VI Non-parametric methods 250
VI.1 The sign test, Wilcoxon's signed-rank test . . . 250
VI.2 Wilcoxon's rank-sum test . . . 256
VI.3 The runs test . . . 261
VI.4 Rank correlation tests . . . 265
VI.5 The Kruskal–Wallis test . . . 270
VI.6 Friedman's test . . . 273
VI.7 Exercises . . . 278

VII Stochastic analysis and its applications in statistics 282
VII.1 The empirical distribution function associated with a sample . . . 282
VII.2 Convergence of stochastic variables . . . 284
VII.3 The Glivenko–Cantelli theorem . . . 303
VII.4 The Kolmogorov–Smirnov test statistic . . . 311
VII.5 Metrics on the set of distribution functions . . . 316
VII.6 Smoothing techniques . . . 328
VII.7 Robustness of statistics . . . 334
VII.8 Trimmed means, the median and their robustness . . . 341
VII.9 Statistical functionals . . . 358
VII.10 The von Mises derivative and influence functions . . . 372
VII.11 Bootstrap methods . . . 384
VII.12 Estimation of densities by means of kernel densities . . . 392
VII.13 Estimation of densities by means of histograms . . . 401
VII.14 Exercises . . . 405

VIII Vectorial statistics 419
VIII.1 Linear algebra . . . 419
VIII.2 The expectation and covariance of stochastic vectors . . . 434
VIII.3 Vectorial samples . . . 446

VIII.4 Vectorial normal distributions 450
VIII.5 Conditional probability distributions related to Gaussian ones . . 463
VIII.6 Vectorial samples from Gaussian distributed populations 470
VIII.7 Vectorial versions of the fundamental limit theorems 486
VIII.8 Normal correlation analysis 497
VIII.9 Multiple regression analysis 505
VIII.10 The multiple correlation coefficient 517
VIII.11 Exercises 524

Appendix

A Lebesgue's convergence theorems 529
B Product measures 532
C Conditional probabilities 536
D The characteristic function of the Cauchy distribution 540
E Metric spaces, equicontinuity 543
F The Fourier transform and the existence of stoutly tailed distributions 553

List of elementary probability densities 559

Frequently used symbols 561

Statistical tables 568

Bibliography 587

Index 591
