Contents

Preface v

1 The Newtonian Mechanics of Point-Mass Systems: General Properties 1
1.1 Point Masses, Open and Closed Systems 1
1.1.1 The Point Mass as an Idealization 1
1.1.2 Open and Closed Systems, Internal and External Forces 2
1.2 Newton's Axioms (1687): A New Era 4
1.3 Einstein's Equivalence Principle (1916): Another New Era 8
1.3.1 Mass, Weight, Force, and the Like 8
1.3.2 Einstein's Equivalence Principle 9
1.4 Types of Forces 9
1.4.1 Central Forces 9
1.4.2 Conservative Forces (I) 11
1.4.3 Central Potentials 12
1.4.4 Potential and Potential Energy 12
1.4.5 The Lorentz Force 12
1.4.6 Frictional Forces 13
1.5 Equations of Motion 14
1.5.1 Definitions 14
1.5.2 Equations of Motion 15
1.6 Conservation Laws 17
1.6.1 Conservation of Momentum 17
1.6.2 Angular-Momentum Conservation and Central Forces .. 18
1.7 Energy-Conservation Theorem and Conservative Forces 18
1.7.1 Conservative Forces (II) 18
1.7.2 Potential Energy, Work, and Power 19
1.7.3 Energy Conservation Theorem 20
1.8 Invariances and Conservation Laws 20
1.8.1 Translations and Rotations 20

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

1.8.2 Invariances and Conservation Laws: Noether's Theorem (I) 21
1.8.3 The Usefulness of the Conservation Laws 23
1.8.4 The Usefulness of Symmetry Analysis 23
1.9 * Virial Theorem 23
1.10 The Basic Problem of the Mechanics of a Point Mass 25
Summary: Newtonian Mechanics – General Properties 25
Problems 27

2 Newtonian Mechanics: First Applications 29
2.1 One-Dimensional Motion 29
2.1.1 Constant Force 29
2.1.2 Time-Dependent Force 30
2.1.3 Velocity-Dependent Force 31
2.1.4 Coordinate-Dependent Force 32
2.1.5 Example: Plane Pendulum (with Small Amplitude) 34
2.1.6 * Example: Plane Pendulum with Large Amplitude 38
2.2 Motion in a Plane 41
2.2.1 Fixed and Moving Basis 41
2.2.2 Time Dependence of the Moving Basis 42
2.2.3 Velocity, Acceleration, etc. in Plane Polar Coordinates 44
2.2.4 Example: Plane Pendulum 46
2.3 Two-Particle Systems 48
2.3.1 Center-of-Mass and Relative Coordinates 48
2.3.2 Equations of Motion 49
2.3.3 Closed Systems 50
Summary: Newtonian Mechanics – First Applications 51
Problems 52

3 Lagrangian Mechanics 55
3.1 Motion with Constraints 56
3.2 Constraints and Generalized Coordinates 57
3.2.1 Examples of Constraints 57
3.2.2 Classification of Constraints 58
3.2.3 Degrees of Freedom 61
3.2.4 Generalized Coordinates 62
3.2.5 Example: Plane Double Pendulum 62
3.3 Forces of Constraint 63
3.4 The Principle of d'Alembert 64
3.4.1 Real and Virtual Displacements 64
3.4.2 The Principle of Virtual Work 66
3.4.3 The Principle of d'Alembert 67
3.5 Lagrangian Equations of the Second Kind 67
3.5.1 External and Internal Forces 68
3.5.2 Conservative Forces 68

3.5.3 Inertial Forces ... 69
3.5.4 Lagrangian Equations of Motion ... 70
3.5.5 Example: Plane Motion in a Central Potential ... 72
3.5.6 Example: Bead Sliding on a Uniformly Rotating Rod ... 73
3.5.7 Example: Plane Double Pendulum ... 74
3.5.8 Separable Systems ... 76
3.6 Generalized Momentum, Force, etc. ... 78
3.6.1 Generalized Force and Generalized Momentum ... 78
3.7 Velocity-Dependent Forces ... 80
3.7.1 Generalized Potential ... 80
3.7.2 Lorentz Force ... 80
3.8 Gauge Invariance and Form Invariance ... 81
3.8.1 (Un)Ambiguity of the Lagrangian Function: Gauge Transformation ... 81
3.8.2 * Form Invariance of the Lagrangian Equations under Point Transformations ... 83
3.9 * Lagrangian Equations of the First Kind ... 84
3.9.1 Lagrange Multipliers ... 84
3.9.2 Lagrangian Equations of the First Kind ... 85
3.9.3 Example: Atwood Machine ... 86
3.10 Hamilton's Principle ... 92
3.10.1 The Action ... 92
3.10.2 Hamilton's Principle ... 93
3.11 Symmetries and Conservation Laws ... 95
3.11.1 Noether's Theorem (II) ... 95
3.11.2 Cyclic Coordinate and Conservation of the Conjugate Momentum ... 96
3.11.3 Homogeneity in Time and Energy Conservation ... 97
3.11.4 Space Homogeneity and Conservation of Momentum ... 100
3.11.5 Isotropy and Angular-Momentum Conservation ... 100
Summary: Lagrangian Mechanics ... 101
Problems ... 102

4 Harmonic Vibrations ... 113
4.1 The Simple Oscillator ... 117
4.1.1 Eigen Solutions of the Homogeneous Differential Equation ... 117
4.2 The Free Oscillator with Damping ... 120
4.2.1 Eigen Solutions of the Homogeneous Differential Equation ... 120
4.2.2 Reality of the Solution ... 122
4.2.3 Initial Conditions ... 123

4.3 The Forced Harmonic Oscillator 125
4.3.1 Equation of Motion 125
4.3.2 Solution of the Inhomogeneous Linear Differential Equation by Fourier Transformation 126
4.3.3 Green Function of the Damped Oscillator in Frequency Space 129
4.3.4 Time-Dependent Green Function 131
4.3.5 Energy Considerations 134
4.4 Coupled Oscillators 138
4.4.1 Introductory Example: Stretching Vibrations in the CO_2 Molecule 138
4.4.2 General Coupled Vibrations 145
4.4.3 Normal Coordinates 147
Summary: Harmonic Vibrations 148
Problems 149

5 Central Potentials and the Kepler Problem 157
5.1 Central Force and Motion in a Plane 157
5.1.1 Central Potential, Central Force, and Angular-Momentum Conservation 157
5.1.2 Central Potential and Effective Radial Potential 159
5.1.3 Central Potential and Trajectory 160
5.2 Kinematics of the Kepler Motion 163
5.2.1 Kepler's Laws 163
5.2.2 Polar Representation of the Conics 165
5.2.3 Determination of the Force and Potential from the Trajectory 166
5.2.4 Determination of the Trajectory from the Potential 168
5.2.5 Trajectory and Rotation Periods 171
5.2.6 The Laplace–Runge–Lenz Vector 173
5.2.7 Perihelion Rotation 175
Summary: Central Potentials and the Kepler Problem 177
Problems 178

6 Collision and Scattering Problems 183
6.1 Kinematics 183
6.1.1 Scattering and Collision 184
6.1.2 Momentum Change and Impulsive Force 184
6.1.3 Laboratory System and Center-of-Mass System 185
6.1.4 Consequences of the Conservation of Momentum 186
6.1.5 Elastic and Inelastic Scattering 187
6.1.6 Consequences of the Angular-Momentum Conservation 189

6.2 Collision of Hard Spheres ... 190
6.2.1 Notations ... 190
6.2.2 Elastic Collision of Smooth Spheres (Laboratory System) ... 190
6.3 Scattering by a Central Potential ... 194
6.3.1 Central Potential and Scattering Angle ... 194
6.3.2 Scattering by the Gravitational Potential ... 195
6.4 * The Cross-Section ... 196
6.4.1 The Problem ... 196
6.4.2 Scattering of Many Probe Particles by Many Target Particles ... 197
6.4.3 Scattering from a Particle at Rest ... 197
6.4.4 The Differential Cross-Section ... 198
6.4.5 The Total Cross-Section ... 200
6.4.6 The Rutherford Cross-Section ... 200
6.4.7 Scattering Cross-Section for a Collision of Hard Spheres ... 201
Summary: Collision and Scattering Problems ... 202
Problems ... 203

7 Moving Reference Frames ... 207
7.1 Translations ... 208
7.1.1 The Transformation ... 208
7.1.2 Inertial Forces ... 209
7.2 Rotation Around a Fixed Point ... 209
7.2.1 Active and Passive Rotation ... 209
7.2.2 Infinitesimal Rotations ... 210
7.2.3 Representation in Different Coordinate Systems ... 211
7.2.4 Uniformly Rotating System: Centrifugal and Coriolis Force ... 214
7.2.5 The Foucault Pendulum ... 214
7.3 Galilean and Lorentz Transformation ... 217
7.3.1 The Relativity Principle ... 218
7.3.2 General and Special Transformation ... 218
7.3.3 The Galilean Transformation ... 219
7.3.4 Galilean Invariance ... 220
7.3.5 The Lorentz Transformation ... 221
Summary: Moving Reference Frames ... 222
Problems ... 223

8 Dynamics of a Rigid Body ... 227
8.1 The Rigid Body as a System of N Point Masses ... 227
8.2 Translational and Rotational Energy: Inertia Tensor ... 228
8.2.1 The Center of Mass as the Specific Point ... 228
8.2.2 The Instantaneously Fixed Point as the Specific Point ... 231

8.3 Transition to the Continuum 232
8.3.1 Example: Center of Mass of a Homogeneous Hemisphere 233
8.3.2 Examples of Inertia Tensors 234
8.4 Change of the Reference System: Steiner's Theorem 238
8.4.1 Steiner's Theorem 238
8.4.2 Angular Momentum and Torque 239
8.4.3 Examples 241
8.5 Principal Moments of Inertia and Principal Axes 242
8.5.1 Definitions 242
8.5.2 Examples 244
8.6 Rotation Around a Fixed Axis 247
8.6.1 Inertia Tensor and Moment of Inertia 248
8.6.2 The Equation of Motion 249
8.6.3 Example: Motion in the Homogeneous Gravitational Field: The Physical Pendulum 249
8.6.4 Example: A Cylinder Rolling on an Inclined Plane 251
8.7 Rotation Around a Fixed Point: The Top 253
8.7.1 Space-Fixed (Inertial) and Body-Fixed Coordinate System 253
8.7.2 * Euler Angles 254
8.7.3 * The Euler Equations of Motion 257
8.8 The Force-Free Symmetrical Top 258
8.8.1 The Equations of Motion 258
8.8.2 * Stability of the Rotational Motion of the Top 260
Summary: Dynamics of a Rigid Body 262
Problems 263

9 Hamiltonian Dynamics 269
9.1 Hamiltonian Equations of Motion 269
9.1.1 The Hamiltonian Function 269
9.1.2 Canonical (Hamiltonian) Equations of Motion 271
9.1.3 * (Un)Ambiguity of the Hamiltonian Function: Gauge Transformation 274
9.2 * Poisson Brackets 275
9.2.1 Definition 29. (Poisson Brackets) 275
9.2.2 Equations of Motion 276
9.2.3 Fundamental Poisson Brackets 277
9.2.4 Properties of the Poisson Brackets 277
9.2.5 Example: Harmonic oscillator 277
9.2.6 Transition to Quantum Mechanics 278
9.3 Configuration Space and Phase Space 278
9.3.1 Configuration Space 278
9.3.2 Phase Space 279

9.4 * The Modified Hamilton Principle 281
9.5 * Canonical Transformation 282
9.5.1 Point Transformation in Configuration Space 282
9.5.2 Point Transformation in Phase Space 283
9.5.3 Canonical Transformation 284
9.5.4 Time Development as a Canonical Transformation 287
9.5.5 Canonical Invariants 288
9.5.6 Generating Function 289
9.5.7 The Theorem of Liouville 294
9.6 * Hamilton–Jacobi Equation 296
9.6.1 Action Function 296
9.6.2 The Characteristic Function 298
9.6.3 Examples 299
Summary: Hamiltonian Dynamics 303
Problems 304

10 * Introduction to the Mechanics of Continua 309
10.1 Fields 309
10.2 Lagrangian Density 311
10.2.1 Kinetic Energy Density 311
10.2.2 Potential Energy Density 312
10.2.3 Lagrangian Density 314
10.3 Hamilton's Principle and Lagrangian Equations 314
10.4 The Energy–Momentum Tensor 317
10.4.1 The Conservation Theorem 317
10.4.2 Energy Density 318
10.4.3 Energy–Current Density 319
10.4.4 Energy Conservation 320
10.4.5 The Strain–Momentum Density 320
10.4.6 The Stress Tensor 322
10.4.7 Conservation of the Strain Momentum 323
Summary: Mechanics of Continua 324

A Physical Constants 325

B Scalars, Vectors, Tensors 329
B.1 Definitions and Simple Rules 329
B.1.1 Definitions 329
B.1.2 Behavior Under Inversion 330
B.2 Vectors 330
B.2.1 Rules for Vectors 330
B.2.2 Dyadic Product (Tensor Product) of Vectors 331
B.2.3 Vector Product (Cross Product) of Vectors 331
B.2.4 Triple Scalar Product of Vectors 332
B.2.5 Multiple Products of Vectors 332

C Rectangular Coordinate Systems 333
C.1 Definitions 333
C.2 Cartesian Coordinates 333
C.3 Spherical Polar Coordinates (Spherical Coordinates) 334
C.4 Cylindrical Coordinates 335
C.5 Plane Polar Coordinates 335
C.6 Inverse Relations 336
Problems 336

D Nabla (Del) Operator and Laplace Operator 339
D.1 Representations of the Nabla and Laplace Operators 339
D.2 Standard Relations 340
D.3 Rules 341
D.4 Integral Theorems 342
D.4.1 The Theorem of Gauß 342
D.4.2 Stokes' Theorem 343
D.4.3 The Theorem of Green 343
Problems 344

E Variational Method 347
E.1 Functions and Functionals 347
E.2 Variational Problem and Euler Equation 348
Problems 350

F Linear Differential Equations with Constant Coefficients ... 351
F.1 Homogeneous Linear Differential Equations 351
F.2 Inhomogeneous Linear Differential Equations 352
F.3 Stability of Solutions 353

G Quadratic Matrices and Their Eigen Solutions 355
G.1 The Eigen Value Problem 355
G.2 Definitions 355
G.3 Properties of the Eigen Values 357
G.4 Properties of the Eigen Vectors of Hermitian Matrices 358

H Dirac δ-Function and Heaviside Step Function 361
H.1 Properties of the Dirac δ-Function and of the Heaviside Step Function 361
H.2 Representation of the δ-Function by Functional Sequences 362
H.3 Integral Representation of the δ-Function 363
H.4 Periodic δ-Function 363
H.5 The δ-Function in $\mathbb{R}^3$ 363
H.6 The δ-Function as an Inhomogeneity of the Poisson Equation . 364

I Fourier Transformation 365
I.1 The Transformation: Fourier Integral 365
I.1.1 Examples and Applications 366
I.1.2 Convolution Theorem 370
I.1.3 Parseval's Equation 371
I.1.4 Uncertainty Relation 372
I.2 Fourier Transformation in $\mathbb{R}^4$: Plane Waves 374
I.2.1 The Whole $\mathbb{R}^3$ 374
I.2.2 Normalization Volume V 375
I.3 Fourier Series 376
I.3.1 The Series 376
I.3.2 Examples and Applications 378
I.3.3 Convolution Theorem 380
I.3.4 Parseval's Equation 382
I.3.5 Fourier Series in $\mathbb{R}^3$: Lattices 382
I.3.6 Functions with Lattice Periodicity 383
Summary: Fourier Integral and Fourier Series 384
Problems 385

J Change of Variables: Legendre Transformation 387

References 389
