Preface	ix
Part 1. Controllability of linear control systems	1
Chapter 1. Finite-dimensional linear control systems	3
1.1. Definition of controllability	3
1.2. An integral criterion for controllability	4
1.3. Kalman's type conditions for controllability	9
1.4. The Hilbert Uniqueness Method	19
Chapter 2. Linear partial differential equations	23
2.1. Transport equation	24
2.2. Korteweg-de Vries equation	38
2.3. Abstract linear control systems	51
2.4. Wave equation	67
2.5. Heat equation	76
2.6. A one-dimensional Schrödinger equation	95
2.7. Singular optimal control: A linear 1-D parabolic-hyperbolic example	99
2.8. Bibliographical complements	118
Part 2. Controllability of nonlinear control systems	121
Part 2. Controllability of nonlinear control systems Chapter 3. Controllability of nonlinear systems in finite dimension	121 125
Part 2. Controllability of nonlinear control systemsChapter 3. Controllability of nonlinear systems in finite dimension 3.1. The linear test	121 125 126
 Part 2. Controllability of nonlinear control systems Chapter 3. Controllability of nonlinear systems in finite dimension 3.1. The linear test 3.2. Iterated Lie brackets and the Lie algebra rank condition 	121 125 126 129
 Part 2. Controllability of nonlinear control systems Chapter 3. Controllability of nonlinear systems in finite dimension 3.1. The linear test 3.2. Iterated Lie brackets and the Lie algebra rank condition 3.3. Controllability of driftless control affine systems 	121 125 126 129 134
 Part 2. Controllability of nonlinear control systems Chapter 3. Controllability of nonlinear systems in finite dimension 3.1. The linear test 3.2. Iterated Lie brackets and the Lie algebra rank condition 3.3. Controllability of driftless control affine systems 3.4. Bad and good iterated Lie brackets 	121 125 126 129 134 141
 Part 2. Controllability of nonlinear control systems Chapter 3. Controllability of nonlinear systems in finite dimension 3.1. The linear test 3.2. Iterated Lie brackets and the Lie algebra rank condition 3.3. Controllability of driftless control affine systems 3.4. Bad and good iterated Lie brackets 3.5. Global results 	121 125 126 129 134 141 150
 Part 2. Controllability of nonlinear control systems Chapter 3. Controllability of nonlinear systems in finite dimension 3.1. The linear test 3.2. Iterated Lie brackets and the Lie algebra rank condition 3.3. Controllability of driftless control affine systems 3.4. Bad and good iterated Lie brackets 3.5. Global results 3.6. Bibliographical complements 	$121 \\ 125 \\ 126 \\ 129 \\ 134 \\ 141 \\ 150 \\ 156$
 Part 2. Controllability of nonlinear control systems Chapter 3. Controllability of nonlinear systems in finite dimension 3.1. The linear test 3.2. Iterated Lie brackets and the Lie algebra rank condition 3.3. Controllability of driftless control affine systems 3.4. Bad and good iterated Lie brackets 3.5. Global results 3.6. Bibliographical complements Chapter 4. Linearized control systems and fixed-point methods 	121 125 126 129 134 141 150 156 159
 Part 2. Controllability of nonlinear control systems Chapter 3. Controllability of nonlinear systems in finite dimension 3.1. The linear test 3.2. Iterated Lie brackets and the Lie algebra rank condition 3.3. Controllability of driftless control affine systems 3.4. Bad and good iterated Lie brackets 3.5. Global results 3.6. Bibliographical complements Chapter 4. Linearized control systems and fixed-point methods 4.1. The Linear test: The regular case 	$121 \\ 125 \\ 126 \\ 129 \\ 134 \\ 141 \\ 150 \\ 156 \\ 159 \\ 159 \\ 159 \\ 159 \\ 159 \\ 159 \\ 159 \\ 159 \\ 159 \\ 159 \\ 159 \\ 159 \\ 159 \\ 150 $
 Part 2. Controllability of nonlinear control systems Chapter 3. Controllability of nonlinear systems in finite dimension 3.1. The linear test 3.2. Iterated Lie brackets and the Lie algebra rank condition 3.3. Controllability of driftless control affine systems 3.4. Bad and good iterated Lie brackets 3.5. Global results 3.6. Bibliographical complements Chapter 4. Linearized control systems and fixed-point methods 4.1. The Linear test: The regular case 4.2. The linear test: The case of loss of derivatives 	121 125 126 129 134 141 150 156 159 159 165
 Part 2. Controllability of nonlinear control systems Chapter 3. Controllability of nonlinear systems in finite dimension 3.1. The linear test 3.2. Iterated Lie brackets and the Lie algebra rank condition 3.3. Controllability of driftless control affine systems 3.4. Bad and good iterated Lie brackets 3.5. Global results 3.6. Bibliographical complements Chapter 4. Linearized control systems and fixed-point methods 4.1. The Linear test: The regular case 4.2. The linear test: The case of loss of derivatives 4.3. Global controllability for perturbations of linear controllable systems 	$121 \\ 125 \\ 126 \\ 129 \\ 134 \\ 141 \\ 150 \\ 156 \\ 159 \\ 165 \\ 177 \\ 177 \\ 125 $
 Part 2. Controllability of nonlinear control systems Chapter 3. Controllability of nonlinear systems in finite dimension The linear test Iterated Lie brackets and the Lie algebra rank condition Controllability of driftless control affine systems A. Bad and good iterated Lie brackets Global results Global results Chapter 4. Linearized control systems and fixed-point methods The Linear test: The regular case The linear test: The case of loss of derivatives Global controllability for perturbations of linear controllable systems 	121 125 126 129 134 141 150 156 159 159 165 177 181
 Part 2. Controllability of nonlinear control systems Chapter 3. Controllability of nonlinear systems in finite dimension The linear test Iterated Lie brackets and the Lie algebra rank condition Controllability of driftless control affine systems Controllability of driftless control affine systems Controllability of driftless control affine systems Bad and good iterated Lie brackets Global results Global results Bibliographical complements Chapter 4. Linearized control systems and fixed-point methods The Linear test: The regular case The linear test: The case of loss of derivatives Global controllability for perturbations of linear controllable systems Chapter 5. Iterated Lie brackets Chapter 6. Return method	121 125 126 129 134 141 150 156 159 165 177 181 187
 Part 2. Controllability of nonlinear control systems Chapter 3. Controllability of nonlinear systems in finite dimension 3.1. The linear test 3.2. Iterated Lie brackets and the Lie algebra rank condition 3.3. Controllability of driftless control affine systems 3.4. Bad and good iterated Lie brackets 3.5. Global results 3.6. Bibliographical complements Chapter 4. Linearized control systems and fixed-point methods 4.1. The Linear test: The regular case 4.2. The linear test: The case of loss of derivatives 4.3. Global controllability for perturbations of linear controllable systems Chapter 5. Iterated Lie brackets Chapter 6. Return method 6.1. Description of the method 	121 125 126 129 134 141 150 156 159 165 177 181 187 187

6.3. Local controllability of a 1-D tank containing a fluid modeled by the Saint-Venant equations	203
Chapter 7. Quasi-static deformations7.1. Description of the method7.2. Application to a semilinear heat equation	223 223 225
Chapter 8. Power series expansion8.1. Description of the method8.2. Application to a Korteweg-de Vries equation	235 235 237
 Chapter 9. Previous methods applied to a Schrödinger equation 9.1. Controllability and uncontrollability results 9.2. Sketch of the proof of the controllability in large time 9.3. Proof of the nonlocal controllability in small time 	247 247 252 263
Part 3. Stabilization	271
 Chapter 10. Linear control systems in finite dimension and applications to nonlinear control systems 10.1. Pole-shifting theorem 10.2. Direct applications to the stabilization of finite-dimensional control systems 10.3. Gramian and stabilization 	275 275 279 282
 Chapter 11. Stabilization of nonlinear control systems in finite dimension 11.1. Obstructions to stationary feedback stabilization 11.2. Time-varying feedback laws 11.3. Output feedback stabilization 11.4. Discontinuous feedback laws 	287 288 295 305 311
 Chapter 12. Feedback design tools 12.1. Control Lyapunov function 12.2. Damping feedback laws 12.3. Homogeneity 12.4. Averaging 12.5. Backstepping 12.6. Forwarding 12.7. Transverse functions 	313 313 314 328 332 334 337 340
 Chapter 13. Applications to some partial differential equations 13.1. Gramian and rapid exponential stabilization 13.2. Stabilization of a rotating body-beam without damping 13.3. Null asymptotic stabilizability of the 2-D Euler control system 13.4. A strict Lyapunov function for boundary control of hyperbolic systems of conservation laws 	347 347 351 356 361
Appendix A. Elementary results on semigroups of linear operators	373
Appendix B. Degree theory	379
Bibliography	397
