

# Table of Contents

<b>Preface</b>	<b>xi</b>
<b>Foreword</b>	<b>xv</b>
<b>List of Symbols</b>	<b>xvii</b>
<b>1 INTRODUCTION</b>	<b>1</b>
1.1 Definitions	6
1.1.1 Chemical reactivity and speciation	6
1.1.2 Measurement of different forms of M in natural media (labile and inert complexes)	7
1.1.3 Determination of complexing agent properties and concentrations	9
1.2 Limitations of Current Models and Methods	10
1.3 Measuring the Reactivity of Environmental Components: A New Perspective of Analytical Chemistry	11
<b>2 THE COMPONENTS OF AQUATIC SYSTEMS AND THEIR REACTIVITY</b>	<b>16</b>
2.1 Classification of Water Components	16
2.1.1 Well-characterized compounds and homologous compound groups	18

2.1.2	Complexing compounds	18
2.1.3	Dissolved components and suspended particles	22
2.1.4	Characterization of complicated mixtures by distribution spectra	23
2.1.4.1	Size distributions	24
2.1.4.2	Analytical 'windows' and average measured parameters	31
2.1.4.3	Distribution of chemical properties at equilibrium	32
2.1.4.4	Distribution of kinetic properties	35
2.2	Concentration of Organic and Inorganic Compounds	37
2.2.1	Organic compounds	37
2.2.2	Inorganic compounds	41
2.3	Basic Principles of Metal Reactivity in Water	47
2.3.1	Reactivity with suspended solid surfaces	48
2.3.2	Reactivity with dissolved inorganic ligands	52
2.3.2.1	Distribution of complexed forms in model water systems	52
2.3.2.2	Distribution of elements between their various oxidation states	57
2.3.2.3	Trace metal classification	59
2.3.3	Reactivity with polyfunctional complexing agents	60
2.3.3.1	Softness and hardness of metals and ligands	64
2.3.3.2	Stereochemical factors	65
2.3.3.3	Hydration properties of macromolecules and colloids	65
2.3.3.4	Polyelectrolyte properties	69
2.3.3.5	Mixed complexes and intramolecular bonds	69
2.3.3.6	Micellization and aggregate formation	71
2.4	Relation Between Reactivity and Availability of Metals in Aquatic Systems	72
2.4.1	Reactivities of the different metal groups	72
2.4.2	Ecochemical role of the various groups of aquatic complexing agents	75
2.4.3	Overall complexing ability of an aquatic system	77
2.4.4	Importance of kinetic factors	81
<b>3</b>	<b>COMPOSITION AND ORIGIN OF NATURAL ORGANIC MATTER</b>	<b>90</b>
3.1	Definitions and Classification	91
3.1.1	Principal types of NOM	91
3.1.2	The NOM of different aquatic systems	95
3.2	Oceanic Organic Matter	96
3.2.1	Production of NOM in pelagic zones	96
3.2.2	Spatial distribution of particulate and dissolved NOM	97
3.2.3	Evolution of marine NOM	100

3.2.4	Composition of marine NOM	103
3.2.4.1	Composition of living organisms	103
3.2.4.2	Particulate organic matter	105
3.2.4.3	Dissolved organic matter	107
3.3	Pedogenic Organic Matter	110
3.3.1	Origin and fractionation of soil organic matter (SOM)	110
3.3.2	Relationship between soil NOM (SOM) and aquatic pedogenic NOM (POM)	112
3.3.3	Nature of soil NOM	113
3.3.4	NOM of rivers	118
3.4	Lake Organic Matter	120
3.4.1	Production of aquagenic NOM in freshwater	122
3.4.2	Distinctions between aquagenic (AOM) and pedogenic (POM) NOM	122
3.4.2.1	C/N, C/O, C/H and C/S ratios	123
3.4.2.2	POC/TOC ratio	124
3.4.2.3	UV-absorption/DOC ratio	124
3.4.2.4	Isotopic ratios	126
3.4.3	Evolution of POM and AOM in lakes	127
3.4.4	Composition of lake NOM	132
3.5	Importance of Local Environments and Transition Zones	136
3.5.1	Coastal zones	137
3.5.2	Estuaries	139
3.5.3	Sediments	142
3.5.3.1	Sedimentation of undegraded cellular debris	142
3.5.3.2	Adsorption of NOM on inorganic particles	142
3.5.3.3	Benthic decomposition	143
3.5.3.4	Composition of sediment NOM	144
<b>4</b>	<b>CHARACTERISTICS OF AQUATIC ORGANIC COMPOUNDS</b>	<b>146</b>
4.1	Characterization and Fractionation of Major NOM Components	147
4.1.1	Characterization and determination methods	147
4.1.2	Fractionation of NOM	149
4.1.2.1	Separation by size	149
4.1.2.2	Separation on hydrophobic resins	151
4.1.2.3	Separation by ion-exchange	151
4.2	Nature of Aquatic Proteins and Peptides	152
4.3	Aquatic Polysaccharides	154
4.3.1	Origin	154
4.3.2	Composition	158
4.3.3	Properties	161
4.3.3.1	Size	161
4.3.3.2	Hydration	161
4.3.3.3	Viscosity	163
4.3.3.4	Charge	163

4.4	Composition of Refractory Organic Matter (ROM)	163
	Originating from Soil	163
4.4.1	Overall composition	164
4.4.2	Specific Compounds	165
4.4.2.1	Carbohydrates	168
4.4.2.2	Fatty acids	168
4.4.2.3	Hydrocarbons	169
4.4.2.4	Nitrogen-containing compounds	170
4.4.2.5	Sulphur-containing compounds	171
4.4.2.6	Phosphorus-containing compounds	171
4.4.2.7	Aromatic compounds	172
4.5	Properties of Soil Refractory Organic Matter (ROM)	173
4.5.1	Structure	173
4.5.2	Size and molecular weight	177
4.5.2.1	Interpretation of data	177
4.5.2.2	Molecular weight	178
4.5.2.3	Size	178
4.5.2.4	Relationships between molecular weight and composition	179
4.5.3	Hydration	183
4.5.4	Aggregation	184
4.6	Aquagenic Refractory Organic Matter	187
4.6.1	Properties of AROM	187
4.6.2	Structure and synthesis of marine LAROM	190
4.7	Sedimentary Humic and Fulvic Fractions	192
<b>5</b>	<b>INTERPRETATION OF COMPLEXATION EQUILIBRIA</b>	<b>195</b>
5.1	Introduction	195
5.1.1	Principal properties of natural complexants	195
5.1.2	Level of interpretation of complexation reactions	198
5.1.3	Symbols	200
5.2	Complexation by Simple Ligands	200
5.2.1	Principles and definitions	200
5.2.1.1	Equilibrium constants of complexes	200
5.2.1.2	Balance equations	201
5.2.1.3	Activity coefficients	202
5.2.2	Experimental determination of equilibrium constants	203
5.2.2.1	Definitions	203
5.2.2.2	General principle of determination	205
5.2.2.3	Cases where the ionic strength is constant	206
5.2.2.4	Example I, 1:1 complexes between major ions	207
5.2.2.5	Example II, formation of 1:n complexes between a minor cation and a major ligand	207

5.2.3	Theoretical calculation of complex distribution	209
5.2.3.1	Principles	209
5.2.3.2	Graphical representations	211
5.2.3.3	Limitations of thermodynamic modelling	216
5.3	Specific Reactions of a Single Ion or Compound with Homologous Complexants	216
5.3.1	Principles and definitions	216
5.3.1.1	Internal and external variables	217
5.3.1.2	General formulation of the complexation reaction	218
5.3.1.3	Influence of pH	219
5.3.1.4	Degree of site occupation; affinity spectra	220
5.3.2	Each site affinity is independent of $\bar{\theta}$	224
5.3.2.1	Formation of 1:1 and 1:2 complexes with a single type of site	225
5.3.2.2	Formation of 1:1 complexes with $j \geq 1$	228
5.3.3	Site affinity varies with $\bar{\theta}$ ; interpretation using <i>a priori</i> theoretical models	236
5.3.3.1	General considerations	236
5.3.3.2	Purely electrostatic secondary interactions	238
	– Principles	238
	– Acid–base properties of metal oxides	245
	– Acid–base properties of macromolecules	248
	– Metal complexation by macromolecules	251
5.3.3.3	The complexant considered as a permeable distinct (gel) phase	255
5.3.3.4	Interpretation by means of arbitrary isotherms and affinity spectra	258
5.3.4	Direct determination of affinity spectra	266
5.3.4.1	Numerical resolution of Eq. (5.58)	266
5.3.4.2	Differential equilibrium functions	268
5.3.4.3	Relationships between theoretical representations and experimentally measured variables for heterogeneous complexants	272
5.4	Competition Reactions	277
5.4.1	Non-specific reactions; ion-exchange	279
5.4.1.1	Impenetrable colloidal particles	281
5.4.1.2	Flexible organic polyelectrolytes	282
5.4.2	Equilibrium quotients of competition reactions, and retention capacity	284
5.4.3	Specific competition reactions on pure oxide surfaces	286
5.4.3.1	Principles	286
5.4.3.2	Cation complexation	288
5.4.3.3	Anion complexation	290
5.4.3.4	Formation of mixed surface complexes	292

5.4.4	Specific competition reactions with polyfunctional complexants	292
5.4.4.1	Inorganic polyfunctional complexants	293
5.4.4.2	Multi-metal/multi-site competition in organic polyfunctional gels	296
5.5	Choice of Interpretation Model	299
<b>6</b>	<b>COMPLEXATION PROPERTIES OF HOMOLOGOUS COMPLEXANTS AND CHOICE OF MEASURING METHODS</b>	<b>304</b>
6.1	Organic Complexants	306
6.1.1	Fulvic and humic compounds	306
6.1.1.1	Physical properties	306
6.1.1.2	Acid–base properties	308
6.1.1.3	Complexing properties	314
6.1.2	Proteins and polysaccharides	322
6.1.3	Cell walls	326
6.1.3.1	Structure and physical properties	326
6.1.3.2	Complexing properties	329
6.2	Inorganic Complexants	330
6.2.1	Metal oxides and hydroxides	330
6.2.1.1	Structure and physical properties	330
6.2.1.2	Chemical properties	333
6.2.2	Other inorganic solids	338
6.3	Natural Solid–Solution Systems	340
6.3.1	NOM coating of particles	341
6.3.1.1	Adsorption energy	342
6.3.1.2	Influence of organic coating on particle properties	346
6.3.2	Sediments	347
6.3.3	Soils	352
6.4	Kinetic Properties	354
6.4.1	Rate constants of chemical reactions	354
6.4.1.1	General principles	354
6.4.1.2	Metal complexation by fulvic compounds	356
6.4.1.3	Complexes with inorganic solids	358
6.4.1.4	Competitive reactions	358
6.4.2	Diffusion coefficients	359
6.4.3	Classification of complexants by kinetic properties	363
6.5	Complexation Measurements in Complete Aquatic Media: Choice of Methods and Experimental Conditions	364
6.5.1	Strategy for complexation measurements	365
6.5.1.1	The various approaches	365
6.5.1.2	The various steps	367

6.5.2	Choice of reaction interpretation model (step V)	371
6.5.3	Choice of methods and experimental conditions	372
6.5.3.1	Equilibrium parameter measurements	373
6.5.3.2	Role of kinetic factors	380
<b>7</b>	<b>EXPERIMENTAL DETERMINATION OF THE <i>IN SITU</i></b>	
	<b>DISTRIBUTION OF CHEMICAL SPECIES</b>	<b>384</b>
7.1	Sampling and Pretreatment	385
7.1.1	Contamination	385
7.1.2	Sample collection	387
7.1.3	Storage; adsorption on containers	391
7.1.4	Pretreatment	392
7.1.4.1	Preconcentration	392
7.1.4.2	Separation of particulate and dissolved compounds	393
7.1.4.3	Separation of dissolved-compound groups	395
7.2	Distribution Schemes for Metals, based on Fractionation	395
7.2.1	Fractionation schemes for dissolved compounds	396
7.2.1.1	Single-criterion schemes based on size	396
7.2.1.2	Single-criterion schemes based on complex lability	398
7.2.1.3	Chromatographic fractionation	402
7.2.1.4	Fractionation by decomposition	403
7.2.1.5	Multiple-criteria schemes	403
7.2.2	Fractionation scheme for non-living particles	405
7.2.2.1	Principles	405
7.2.2.2	Relationship between chemical fractionation and thermodynamic models	407
7.2.2.3	Relationship between chemical fractionation and biological uptake	411
7.2.3	Fractionation scheme for unicellular organisms	412
7.3	Distribution Schemes based on Combination of Direct Measurements: Case of Fe and S in eutrophic lakes	415
7.3.1	Principles	415
7.3.2	Methodological scheme	418
7.3.2.1	Filtration (particle/colloid limit)	420
7.3.2.2	Differential pulse polarography (colloid/labile compounds limit)	421
7.3.3	Results	423
<b>8</b>	<b>STUDY OF COMPLEXATION PROPERTIES BY POTENTIO-</b>	
	<b>METRIC METHODS</b>	<b>427</b>
8.1	General Characteristics of Electrochemical Methods	427

8.2	Membrane Electrodes (ISEs)	433
8.2.1	Principles	437
8.2.2	Optimum conditions for direct measurement of $\{M\}$	439
8.2.2.1	Constancy of $E_0$	439
8.2.2.2	Interfacial equilibrium	441
8.2.2.3	Response time	443
8.2.3	Direct measurement of the degree of complexation	445
8.2.3.1	Calibration in non-complexing media	446
8.2.3.2	Measurements in complexing media	447
8.2.3.3	Practical conditions for complexation measurements	449
8.2.3.4	Optimal measurement conditions	455
8.3	Amalgam Electrodes	456
8.3.1	Preparation	456
8.3.2	Measurements in non-complexing media	457
8.3.2.1	Principles	457
8.3.2.2	Sensitivity limits	459
8.3.3	Application to complexation measurements	463
8.3.3.1	Examples	463
8.3.3.2	Influence of oxygen	465
<b>9</b>	<b>STUDY OF COMPLEXATION PROPERTIES BY VOLTAM- METRIC METHODS</b>	<b>467</b>
9.1	Factors Influencing Sensitivity in Non-complexing Media	468
9.1.1	Principles	468
9.1.1.1	Faradaic current–potential–time relationships	469
9.1.1.2	Interpretation of current–potential curves in terms of concentration gradients	475
9.1.2	Principal voltammetric methods	477
9.1.2.1	Electronic factors: conditioning and measurement times	480
9.1.2.2	Mechanical and geometric factors	482
9.1.2.3	Chemical preconcentration on or into the electrode	486
9.1.3	Applications to natural waters	489
9.2	General Phenomena Influencing Complexation Measurements	490
9.2.1	Nature of the reactions studied	490
9.2.2	Nature of secondary phenomena	492
9.2.2.1	Influence of electric field	493
9.2.2.2	Adsorption at the interface	495
9.2.2.3	Influence of compound fluxes at the interface	500
9.2.3	Simple systems and secondary phenomena: definitions	501
9.2.4	Reaction rates in simple systems	503
9.2.4.1	General principles	503
9.2.4.2	Signal measurement time	507

9.2.4.3	Reversibility and irreversibility	508
9.2.4.4	Lability and inertness	515
9.3	Complexation Measurements in 'Simple' Systems	519
9.3.1	Labile systems	519
9.3.1.1	Theoretical relationships	519
9.3.1.2	Discussion	521
9.3.1.3	Application of the DeFord and Hume method with $D_M = D_{ML}$	522
9.3.1.4	Labile slowly diffusing complexes	524
9.3.2	Chemically inert systems	527
9.3.2.1	Principles	527
9.3.2.2	Measurement of $K$ by variation in $[L]$	528
9.3.2.3	Measurement of complexation capacity, $C_c$	531
9.3.3	Slow systems	531
9.4	Quantitative Influence of Secondary Phenomena	535
9.4.1	Mixture effect	535
9.4.2	Surface pH and complexation buffer capacities	536
9.4.2.1	Reduction methods	537
9.4.2.2	Reoxidation methods	538
9.4.3	Ligand adsorption and adsorbed complex formation	542
9.4.3.1	General principles	542
9.4.3.2	Comparison of diffusion and adsorption rates	546
9.4.3.3	System (M-PROM) forming soluble and adsorbed complexes, studied by direct reduction methods	548
9.4.3.4	System (M-PROM) forming soluble and adsorbed complexes, studied by ASV	555
9.5	Choice of Optimum Conditions	559
<b>10</b>	<b>STUDY OF COMPLEXATION PROPERTIES BY NON-ELECTRO- CHEMICAL METHODS</b>	<b>563</b>
10.1	Choice of Method	564
10.2	Direct Methods Without Separation: Spectrometry	566
10.2.1	Electron spin resonance (ESR)	566
10.2.2	Fluorescence	567
10.2.2.1	Emission wavelength and intensity	567
10.2.2.2	Quenching effect	568
10.2.2.3	Fluorescence polarization	569
10.2.2.4	Fluorescence lifetime	569
10.2.2.5	Applications to aquatic complexants	569
10.3	Methods Based on Direct Physical Separation	570
10.3.1	Membrane separation principles	570
10.3.1.1	Different modes of separation	570

10.3.1.2	Ultrafiltration flux and retention coefficient	573
10.3.1.3	Experimental methods and membranes	576
10.3.2	Membrane separation: applications to equilibrium studies	578
10.3.2.1	Dialysis	578
10.3.2.2	Ultrafiltration with continuous reagent addition	578
10.3.2.3	Ultrafiltration by the concentration method	579
10.3.2.4	Influence of complex dissociation kinetics	580
10.3.3	Membrane separation: factors influencing the retention coefficient	585
10.3.3.1	Electrostatic and hydration effects	586
10.3.3.2	Steric effects	589
10.3.3.3	Concentration polarization	589
10.3.3.4	Other surface effects	591
10.3.4	Size exclusion chromatography	591
10.3.4.1	Separation principles	591
10.3.4.2	Applications to complexation measurements	595
10.4	Chemical Competition Methods	597
10.4.1	Chemical competition in solution	598
10.4.1.1	Methods without separation (spectrometric detection)	598
10.4.1.2	Methods with separation	599
10.4.2	Chemical competition with a solid phase	600
10.4.2.1	Principles	600
10.4.2.2	Solid phase characteristics and determination of $[M]$	602
10.4.2.3	Operating conditions and limitations	604
10.5	Biological Methods	606
10.5.1	Measurements of complexation capacity	606
10.5.2	Measurement of free ion activity	607
10.5.3	Discussion	608
	<b>Appendix</b>	<b>611</b>
