

## CONTENTS

---

<b>1. INTRODUCTION</b>	1
<b>The aging process of lakes and reservoirs</b>	1
<b>The need for concern in regard to eutrophication</b>	3
<b>2. PURPOSE OF BOOK AND HOW IT CAN BEST BE USED</b>	5
<b>Intended audience for the book</b>	6
<b>Focus of the book</b>	7
<b>3. A MANAGEMENT FRAMEWORK FOR THE POLICYMAKER</b>	11
<b>The role of the policymaker</b>	11
The policymaker and environmental issues	11
Development of a eutrophication management framework	12
<b>Identify eutrophication problems and establish management goals</b>	14
Why is eutrophication a problem?	14
Establishment of eutrophication management goals	15
Who should be involved in addressing the problem?	16
<b>Assess the extent of information available about the waterbody</b>	18
<b>Identify available options for management of eutrophication</b>	19
Should one treat the causes or the symptoms?	19
Consider full range of available control options	20
<b>Analyze all costs and expected benefits of alternative management strategies</b>	22
Consider relative costs of control options	22
Compare management goals, available resources and expected benefits	23
Cost-benefit analysis	25

<b>Analyze adequacy of existing legislative and regulatory framework for implementing eutrophication control programmes</b>	30
Institutional concerns	30
Regulatory concerns	31
<b>Select eutrophication control strategy and disseminate summary to affected parties prior to implementation</b>	32
Select and summarize desired control strategy	32
Other practical considerations	33
<b>Provide periodic progress reports on the control programme to the public and other interested parties</b>	34
The role of public awareness	34
The value of public feedback	35
<b>4. CHARACTERISTICS OF EUTROPHICATION</b>	37
<b>The concept of eutrophication as related to trophic status</b>	37
<b>Symptoms of eutrophication</b>	38
General observations	38
Differences between lakes and reservoirs	42
Differences between temperate and tropical lake systems	46
<b>The limiting nutrient concept</b>	49
Some assumptions in using the limiting nutrient concept	51
The use of nitrogen and phosphorus concentrations and ratios to assess nutrient limitation	54
The use of algal bioassays to assess nutrient limitation	58
The use of physiological indicators to assess nutrient limitation	60
<b>5. FACTORS AND PROCESSES AFFECTING THE DEGREE OF EUTROPHICATION</b>	65
<b>Factors related to the drainage basin</b>	65
Natural factors	65
Anthropogenic factors	71
<b>Factors related to the waterbody</b>	74
Morphology of the lake basin	74
In-lake nutrient sources	77
Flushing rate	79
Light intensity	80
Biological controls	80
Macrophyte growths	81
Cage fish farming	83

<b>6. THE USE OF MODELS</b>	85
<b>General types of models</b>	85
<b>Watershed models</b>	87
Empirical watershed models	88
Simulation watershed models	90
<b>Waterbody models</b>	94
Empirical waterbody models	94
Simulation waterbody models	107
 <b>7. ESTIMATING THE NUTRIENT LOAD TO A WATERBODY</b>	 115
<b>Major phosphorus and nitrogen sources</b>	115
Point sources	115
Diffuse (non-point) external sources	116
Diffuse internal sources	118
Biological availability of nutrients	119
<b>Quantifying the nutrient load</b>	120
Point source loads	121
Diffuse (non-point) external loads	122
Diffuse internal loads	131
Summary comments on nutrient load quantification	135
<b>A simplified approach for estimating the annual nutrient load to a lake or reservoir</b>	135
Specific steps in use of simple watershed model	138
<b>Nutrient estimates for waterbodies with rapid flushing rates</b>	143
<b>Reliability of nutrient load estimates</b>	146
 <b>8. GUIDELINES FOR SAMPLING A WATERBODY</b>	 147
<b>What to sample</b>	147
<b>Necessary temporal and spatial resolution for data</b>	150
Where to sample	150
When to sample	154
Sampling strategies in waterbodies with longitudinal water quality gradients	155
<b>Calculating the costs of sample collection</b>	158
<b>Compilation and presentation of data</b>	164

<b>9. AVAILABLE TECHNIQUES FOR TREATING EUTROPHICATION</b>	169
<b>General considerations</b>	169
<b>Control of the external phosphorus load</b>	169
Direct reduction of phosphorus at the source	170
Treatment of tributary influent waters	174
Canalization/diversion of wastewaters	179
<b>In-lake eutrophication control methods</b>	181
<b>Control of non-point source nutrients in the drainage basin</b>	191
Major non-point nutrient sources and possible remedial measures	191
<b>Assessment of costs of achieving phosphorus control goals</b>	195
Relative costs of point and non-point source phosphorus control measures	199
Use of optimization models in selection of phosphorus control options for lakes and reservoirs	210
<b>10. THE POSSIBILITIES FOR THE REUSE OF NUTRIENTS</b>	213
<b>Use of algae and macrophytes for nutrient removal</b>	213
Phytoplankton	213
Harvesting of macrophytes and filamentous algae	215
Use of macrophyte biomass as animal food	216
Use of plant biomass as raw materials for commercial purposes	217
<b>Aquaculture for the production of fish and other aquatic food organisms</b>	218
Aquaculture for the control of nutrients	219
Estimation of fish yield	222
Considerations for the management of fish ponds and small waterbodies	226
<b>Other nutrient reuse possibilities</b>	229
<b>Eutrophication and acidification of lakes</b>	230
<b>11. SELECTION OF EFFECTIVE STRATEGIES FOR THE MANAGEMENT OF EUTROPHICATION</b>	231
<b>General considerations</b>	231
<b>Water quality as related to desired water use</b>	232
<b>A simple approach for defining and selecting an effective eutrophication control programme</b>	234
General overview	234
Specific steps to follow	238
What if the waterbody does not respond as expected?	245

<b>Detailed scenario analysis as an aid in selecting eutrophication control measures</b>	251
<b>Post-treatment monitoring</b>	254
<b>ANNEX 1: CLASSIFICATION OF WATERBODIES IN RELATION TO THEIR DESIRED USES</b>	257
<b>A simple lake/reservoir classification system</b>	257
<b>A detailed classification system</b>	262
Hydrographic and territorial criteria	264
Trophic criteria	268
Dissolved solids, special and hygienically-relevant criteria	269
Lake classification in regard to possible water uses	269
How to classify a waterbody	269
<b>ANNEX 2: CASE STUDIES OF EUTROPHICATION CONTROL MEASURES</b>	277
<b>LITERATURE CITED</b>	283
<b>INDEX</b>	309
