The “what” and “why” of children’s cognition xv

Domain-general vs. domain-specific accounts of  
cognition in children xvi

The causal bias xvii

Innate vs. acquired accounts of cognition in children xviii

Qualitative vs. quantitative accounts of developmental  
change xix

Piaget’s stage theory xix

The organisation of this book xxi

<b>1. Cognition in infancy: Basic cognitive processes</b>	<b>1</b>
Memory and learning	1
Neonate memory for the mother’s voice	2
Neonate memory for familiar stories	2
Memory for objects	3
Memory for events	5
Memory for causal events	6
Procedural vs. declarative memories?	9
Perception and attention	9
Attention in infancy	10
Visual preference and habituation	12
Rudimentary categorisation	14
Cross-modal perception in infancy	15
Links between measures of early learning, memory, perception, attention, and later intelligence	18
Speed of habituation and individual differences	18
Visual recognition memory and individual differences	20
Summary	22

<b>2.</b>	<b>Cognition in infancy: Higher cognitive processes</b>	<b>25</b>
	Moving into cognition: Perception-based	
	knowledge representations	25
	Representing the structure of object features:	
	The extraction of prototypes	25
	Processing inter-relations between features:	
	The differentiation of prototypes	26
	Processing relations between objects	31
	Moving further into cognition:	
	Meaning-based knowledge representations	53
	Image schemas	54
	Specialised modules for certain information?	55
	Reasoning and problem solving	56
	The bear in the cup	57
	The dog beneath the cloth	58
	The rabbits behind the wall	58
	The box suspended in mid-air	60
	Learning	60
	Learning by imitation	61
	Learning by analogy	64
	What babies can't do	66
	Search errors in reaching	66
	Search errors in crawling	68
	Summary	70
<b>3.</b>	<b>Conceptual development</b>	<b>73</b>
	Superordinate, subordinate, and "basic-level" categories	73
	The core developmental role of the "basic level"	74
	Sequential touching as a measure of	
	basic-level categorisation	75
	The matching-to-sample task	77
	The core developmental role of	
	the superordinate level?	78
	Child-basic categories vs. adult-basic categories	80
	Beyond the role of perceptual similarity in	
	categorisation	81
	The role of language in conceptual development	84
	The biological/non-biological distinction	86
	Evidence from studies of biological movement	87
	Evidence from knowledge of	
	self-generated movements	89

Evidence from the assumption of shared core properties	90
Concrete or abstract knowledge?	92
Structure vs. function in categorising natural kinds and artifacts	94
Evidence from studies of growth	95
Analogy as a mechanism for understanding biological principles	97
Evidence from studies of inheritance	98
Evidence from studies of natural cause	101
The representation of categorical knowledge	102
The role of thematic relations in organising conceptual knowledge	102
Representing categories in terms of characteristic vs. defining features	104
Representing categories in terms of prototypes	105
Conceptual development, “essences” and naive theories	109
The essentialist bias	110
The “causes and effects of changes” mode	110
Conceptual change in childhood	111
Summary	113
<b>4. The development of causal reasoning</b>	<b>117</b>
Reasoning about causes and effects	118
Reasoning about the causal transformations of familiar objects	119
Reversible reasoning about causal transformations of familiar objects	121
The salience of non-canonical states in early causal reasoning	122
Reasoning on the basis of causal principles	123
The priority principle	124
The covariation principle	126
The temporal contiguity principle	127
The principle of the similarity of causes and effects	128
The understanding of causal chains	130
The understanding of mediate transmission	131
The understanding of logical search	133
Scientific reasoning: The understanding of situations involving multiple causal variables	137
Integrating causal information about different physical dimensions	142

	The integration of knowledge about two dimensions	142
	The integration of knowledge about three dimensions	150
	Intuitive physics	151
	Intuitive physics and projectile motion	152
	The distinction between knowledge and action	154
	Causal reasoning and the direction of causality	155
	Summary	157
	Is the development of causal reasoning domain-general?	158
<b>5.</b>	<b>The development of memory</b>	<b>161</b>
	Early memory development	162
	Infantile amnesia: A real phenomenon?	162
	Understanding symbolic representation as an aid to memory	164
	The development of different memory systems	167
	Recognition memory	167
	Implicit memory	169
	Episodic memory	174
	Eye-witness memory	179
	Working memory	185
	Summary	197
<b>6.</b>	<b>Mnemonic strategies, metamemory and cognition</b>	<b>199</b>
	The development of strategies for remembering	199
	The emergent use of mnemonic strategies	199
	Evidence for the strategic use of rehearsal	201
	Evidence for the strategic use of organisation by semantic category	203
	Metamemory	206
	The relationship between memory development and cognitive development	209
	The novice–expert distinction	210
	The development of processing capacity	214
	Representational redescription as a theory of cognitive development	215
	Summary	218
<b>7.</b>	<b>Logical reasoning in childhood</b>	<b>221</b>
	Early-developing modes of logical reasoning	221
	Reasoning by analogy	221
	Deductive logic and deductive reasoning	227

Later-developing modes of logical reasoning	234
Transitive inferences	234
The understanding of invariance	241
Class inclusion	249
Halford's structure-mapping theory of logical development	254
Summary	256
<b>8. Piaget's theory of logical development</b>	<b>259</b>
Overview of the theory	259
The mechanisms of cognitive change	259
Stages in cognitive development	260
The sensory-motor stage	261
The six stages of sensory-motor cognition	261
Sensory-motor cognition in different domains	263
Evaluation of Piaget's sensory-motor stage in the light of recent research	266
The pre-operational and concrete operational stages	269
Pre-operational thought	270
Concrete operational thought	271
Evaluation of recent research on the concrete operations	271
Formal operational thought	273
Formal operational tasks	274
Evaluation of recent research on the formal operations	276
Summary	277
<b>9. The "what" and "why" of children's cognition</b>	<b>281</b>
What develops?	281
Why does development pursue its observed course?	283
Domain-general vs. domain-specific accounts of cognition in children	283
Innate vs. acquired accounts of cognition in children	285
Qualitative vs. quantitative accounts of developmental change	288
The causal bias	291
