Preface	vi
<b>1. What is eutrophication?</b>	<b>1</b>
1.1 Introduction	1
1.2 Definition and origin of the term eutrophication	2
1.3 Links between eutrophication, biological changes and productivity in lakes	5
1.4 Eutrophication as a natural part of lake succession	17
1.5 Extent of artificial eutrophication	23
1.6 Eutrophication in rivers, estuaries and coastal waters	26
1.7 Measurement of eutrophication	28
<b>2. The nutrients causing eutrophication, and their sources</b>	<b>29</b>
2.1 The requirements of living cells for survival and growth	29
2.2 The important limiting nutrients	30
2.3 The supply of nitrogen and phosphorus to lakes	36
2.4 Relative importance of diffuse and point sources in catchments	53
2.5 Global aspects of nutrient runoff	55
2.6 Methods for estimating the magnitude of nutrient losses from catchments	56
<b>3. The biochemical manifestations of eutrophication</b>	<b>61</b>
3.1 The components of nutrient cycles in aquatic systems	61
3.2 The ultimate sinks of inflowing nitrogen and phosphorus	72
3.3 Changes in the cycles which occur as a consequence of enhanced nutrient inputs	73
3.4 The importance of the littoral zone in nutrient cycles	77
3.5 Seasonal patterns of nitrogen and phosphorus cycles in lakes	78
3.6 Important features of nutrient transformations in rivers and estuaries	79

<b>4. The biological effects of eutrophication</b>	<b>85</b>
4.1 Introduction	85
4.2 Production and species changes of algae and macrophytes	85
4.3 Effects of eutrophication upon macrophytes and attached algae	117
4.4 Production and species changes in zooplankton	120
4.5 Production and species changes of zoobenthos	128
4.6 Effects of eutrophication on fish and other vertebrates	137
4.7 Aquatic food-web considerations	147
4.8 Wider implications for wildlife and conservation	149
<b>5. The engineering, economic and social effects of eutrophication</b>	<b>150</b>
5.1 Introduction	150
5.2 Water supply	150
5.3 Fisheries management	159
5.4 Land drainage and weed control in rivers	162
5.5 Wildlife conservation	163
5.6 Public health hazards and nuisances	164
5.7 Other recreational aspects	166
<b>6. Prediction and modelling of the causes and effects of eutrophication</b>	<b>167</b>
6.1 Introduction	167
6.2 Experimental approaches to measures of eutrophication effects	169
6.3 The application of models in eutrophication assessment and prediction	170
6.4 Caution in the use of regression equations	194
6.5 Lake classification based on correlations and large data sets	196
6.6 Other lake classification indices	203
6.7 Dynamic models of lake ecosystems	205
6.8 Prediction without models	213
<b>7. The reduction of causes and the management of effects of eutrophication</b>	<b>215</b>
7.1 Introduction	215
7.2 Reduction of nutrient inputs to lakes	217
7.3 Evaluation of nutrient control measures	227
7.4 Control of nutrient concentrations within lakes	229
7.5 Management of lakes without nutrient reduction	233

<b>8. A case study in restoration: shallow eutrophic lakes in the Norfolk Broads</b>	<b>251</b>
8.1 Introduction	251
8.2 Historical perspective	251
8.3 Eutrophication of the Broads	254
8.4 Mechanisms of change	254
8.5 Effects of change	257
8.6 Restoration of Broadland	262
8.7 Lake sediment as a source of phosphorus	266
8.8 Changes in the storage of phosphorus in lake sediment following phosphorus control	268
8.9 Biological response to reduced nutrient loading	271
8.10 Nutrient reduction by isolation	273
8.11 Sediment removal and lake isolation	275
8.12 Biomanipulation as a restoration technique	275
8.13 The restoration of Broadland in the context of two stable communities	277
References	279
Index	322
