Table of figures	5
Preface	7
Acknowledgements	11
Glossary	13
Abbreviations	21
Executive summary	23
1. Introduction	25
2. <i>Prevalence and causes of undernutrition in care homes and home care</i>	27
Undernutrition	27
Prevalence.....	28
Causes	31
3. Consequences of undernutrition for older people	36
Morbidity – Mortality	36
Quality of life.....	38
4. Impact of undernutrition on health care costs.....	40
Optimal nutrition and dietary goals in older people	40
Cost-effectiveness and cost-benefit assessment.....	43
Influence of the health cost finance structure	45
Quality of life of the caregiver	45
5. Assessing and treating undernutrition in care homes and home care	47
Nutritional risk screening and nutritional assessment	48
Nutritional support, treatment, monitoring and follow-up.....	49
Nutritional support in dementia and the final stages of life	52
The hospital-care home-home care continuum	55

6. Strategies to tackle undernutrition in hospitals.....	58
7. Strategies to tackle undernutrition in care homes and home care.....	61
Raising awareness.....	61
The roles and responsibilities of health care workers.....	66
The general practitioner – Family doctor	66
Care home and home care nursing staff.....	67
The dietician.....	68
The roles and responsibilities of health care facilities	71
Care homes	71
Food provision.....	76
Home care	79
The role and responsibilities of society	81
The person at risk.....	81
Food services.....	83
Society stakeholders	85
The roles and responsibilities of policy makers.....	88
Conclusions	93
Appendix A: Recommendations of the scientific group of undernutrition experts advising on the Belgian National Food and Health Plan: undernutrition screening and nutritional assessment.....	95
Appendix B: Practical measures set out in the “nutrition quality charter” for care homes (CHs) and care and nursing homes (CNHs)	117
Bibliography	127

Table of figures

Figure 1: Prevalence of undernutrition in the Netherlands 2004-07	30
Figure 2: Risk factors in relation to the development of undernutrition	33
Figure 3: Total expenditure on health as a % of gross domestic product in EU countries	41
Figure 4: Annual cost of disease-related malnutrition, obesity and overweight in UK	43
Figure 6: Awareness – A shared responsibility	62
Figure 7: Reasons why nutrition therapy is often not or only partially implemented	63
Figure 8: Meal consumption linked to mortality	64
Figure 9: Recognition of malnutrition in relation to BMI	65
Figure 10: LPZ project: reduction of malnutrition between 2006 and 2007	73
Figure 11: Intake of nutrients in French nursing homes and among old people living at home	77
Figure 2: Decline of the prevalence of malnutrition between 2004 and 2007 in the Netherlands	82
Figure 13: National differences in the cost of food services	84
