PART I GROUNDWORK

CHAPTER 1	Introduction.....	3
1.1	What are NVEs and NGs?	4
1.2	The Illusion of a Shared Virtual Environment	5
1.3	Some History	7
1.3.1	Internet	8
1.3.2	Simulators	15
1.3.3	Multiuser Dungeons	19
1.3.4	Electronic Games	22
1.3.5	Virtual Reality Systems	27
1.3.6	MMORPGs	30
1.3.7	Social Spaces	33
1.4	Scoping the Software Architecture	36
1.4.1	Software Roles and Responsibilities	38
1.4.2	Differences to Other Network Code	39
1.5	Structure	40
CHAPTER 2	One on One (101)	45
2.1	Boids	45
2.1.1	Boid Rules	46
2.1.2	Standalone Implementation	48
2.2	Distributed Boids: Concepts	49
2.3	Distributed Boids: Implementation	53
2.3.1	Revised Simulation and Data Model	53
2.3.2	Network Concepts	55
2.3.3	Network Protocol	56
2.3.4	Implementation of the Network Component	56
2.3.5	Sending UDP Data Packets	58
2.3.6	Sending TCP Data Streams	62
2.4	Reflection	65
CHAPTER 3	Overview of the Internet	71
3.1	The Internet	71
3.2	Application Layer	75
3.2.1	Application Layer Protocols	76
3.2.2	Application QoS	77
3.2.3	Common Applications and Ports	78
3.2.4	RFCs	80
3.2.5	DNS	80
3.2.6	Telnet and HTTP	82

3.3	Transport Layer	83
3.3.1	Implementing UDP	84
3.3.2	Basics of TCP	87
3.3.3	Reliability in TCP	89
3.3.4	Opening and Closing TCP Connections	96
3.3.5	Flow Control and Congestion Avoidance in TCP	99
3.4	Network Layer	101
3.4.1	Network Address Translation	103
3.4.2	IP Packets	104
3.4.3	Ping, Traceroute & ICMP	109
3.4.4	Routing on the Internet	112
3.4.5	DHCP	112
3.5	Link and Physical Layer	113
3.5.1	Ethernet	115
3.5.2	Comparisons	116
3.6	Further Network Facilities	116
3.6.1	Multicast	117
3.6.2	Network QoS	118
3.7	Summary	121

CHAPTER 4 More Than Two..... 125

4.1	Boids	126
4.1.1	Architecture	126
4.1.2	Protocol	127
4.1.3	Codebase Refactoring	128
4.2	Simple Peer to Peer	130
4.2.1	System Architecture	131
4.2.2	Data Model	132
4.2.3	Network	134
4.2.4	Protocol	135
4.3	Peer to Peer with Master	138
4.3.1	System Architecture	139
4.3.2	Datamodel	140
4.3.3	Network	142
4.3.4	Protocol	142
4.4	Peer to Peer with Rendezvous Server	146
4.4.1	System Architecture	148
4.4.2	Datamodel	149
4.4.3	Network	149
4.4.4	Protocol	150
4.5	Client/Server	152
4.5.1	System Architecture	153
4.5.2	Datamodel	154
4.5.3	Network	155
4.5.4	Protocol	156

4.6	Multicast	158
4.6.1	System Architecture	160
4.6.2	Datamodel.....	161
4.6.3	Network.....	162
4.6.4	Protocol	164
4.7	Extensions	166
4.7.1	Protocol design.....	166
4.7.2	Network Compensation	166
4.7.3	Scale.....	167
4.7.4	Binary Protocols.....	167
4.8	Conclusions	167

PART II FOUNDATIONS

CHAPTER 5	Issues in Networking Graphics	171
5.1	Architecture of the Individual System.....	171
5.1.1	Engines and Engine Framework	173
5.1.2	Modules	177
5.1.3	Content	177
5.1.4	Behavior.....	178
5.2	Role of the Network.....	179
5.2.1	Device I/O Sharing	180
5.2.2	Data Model Sharing.....	181
5.2.3	Command/Event Streaming.....	182
5.2.4	Coping with Scale.....	184
5.3	Initialization	184
5.3.1	Case Study: Disney's Toontown	185
5.4	Server and Peer Responsibilities	186
5.5	Critical and Noncritical	188
5.6	Synchronized or Unsynchronized.....	189
5.7	Ownership and Locking.....	190
5.8	Persistency	190
5.9	Latency and Bandwidth.....	191
5.10	Conclusions.....	192
CHAPTER 6	Sockets and Middleware	195
6.1	Role of Middleware	195
6.2	Low-Level Socket APIs	196
6.2.1	Main Functions	196
6.2.2	Name Helper Functions and Options	199
6.2.3	Network Byte Order	201
6.2.4	Examples	202
6.2.5	Socket Usage Patterns.....	207
6.2.6	Windows.....	207

6.2.7 Synchronous I/O.....	208
6.2.8 Critique and Discussion.....	210
6.3 C and C++ Middleware for Networking.....	210
6.3.1 HawkNL.....	211
6.3.2 SDL_Net.....	211
6.3.3 ACE.....	213
6.4 Conclusion.....	215
CHAPTER 7 Middleware and Message-Based Systems.....	217
7.1 Message-Based Systems.....	217
7.2 DIS.....	218
7.2.1 PDUs.....	219
7.3 X3D and DIS.....	220
7.3.1 Basics of X3D.....	222
7.3.2 Dataflow and Animation.....	224
7.3.3 Scripting and Interfaces.....	227
7.3.4 VRML/X3D Networking Strategies.....	232
7.3.5 X3D and DIS.....	235
7.4 X3D, HawkNL and DIS.....	237
7.4.1 Sending a DIS Packet.....	238
7.4.2 Receiving DIS Packets.....	238
7.5 Conclusions.....	241
CHAPTER 8 Middleware and Object-Sharing Systems.....	247
8.1 Object-Sharing Systems.....	247
8.2 RakNet.....	250
8.2.1 Object Lifecycles.....	251
8.3 Boids using Object-Sharing.....	252
8.3.1 Boid Definitions.....	253
8.3.2 Main Application.....	260
8.3.3 Discussion.....	264
8.4 General Object-Sharing.....	264
8.4.1 Sharing Policy.....	264
8.4.2 Visibility and Sampling Rates.....	265
8.5 Ownership.....	266
8.6 Scene-Graphs, Object-Sharing and Messages.....	271
8.7 Conclusions.....	273
CHAPTER 9 Other Networking Components.....	275
9.1 Remote Method Call.....	275
9.1.1 RPC.....	276
9.1.2 XML-RPC, etc.....	284
9.1.3 CORBA.....	285
9.1.4 Discussion.....	287
9.2 DIVE.....	288

9.2.1 DIVE Overview	288
9.2.2 DIVE Entities.....	291
9.2.3 Events	297
9.2.4 Scripting and Event Scoping.....	299
9.2.5 Networking.....	301
9.2.6 Discussion.....	302
9.3 System Architectures.....	303
9.4 Conclusions.....	306

PART III REAL SYSTEMS

CHAPTER 10 Requirements	313
10.1 Consistency	314
10.1.1 System Perspective.....	315
10.1.2 Plausibility & Fairness.....	316
10.1.3 Consistency-Throughput Tradeoff	318
10.2 Latency and Jitter	319
10.2.1 Sources of Network Latency	319
10.2.2 Jitter.....	321
10.2.3 Clocks and Measurement of Latency and Jitter	324
10.2.4 User Tolerance	326
10.2.5 Latency Impact in Specific Systems.....	329
10.3 Bandwidth.....	330
10.3.1 Measurement.....	331
10.3.2 Traffic Patterns	331
10.3.3 Congestion	336
10.4 State of the Internet	337
10.5 Connectivity.....	340
10.5.1 NAT	340
10.6 Case Study: Burnout™ Paradise.....	343
10.6.1 Car “Mechanics”	344
10.6.2 Game Phases and Time Synchronization.....	345
10.6.3 Game Hosting and Peer-to-Peer Networking.....	347
10.7 Conclusions.....	348
 CHAPTER 11 Latency and Consistency.....	 355
11.1 Latency Impact.....	355
11.2 Dumb Client and Lockstep Synchronization	359
11.2.1 Dumb Client	359
11.2.2 Lockstep Synchronization	360
11.3 Conservative Simulations	360
11.4 Time	362
11.5 Optimistic Algorithms.....	365

11.6	Client Predict Ahead	367
11.7	Extrapolation Algorithms	371
11.7.1	Basic Dead-Reckoning	371
11.7.2	Dead-Reckoning Variants.....	376
11.8	Interpolation, Payout Delays and Local Lag	378
11.9	Local Perception Filters.....	383
11.10	Revealing Latency	387
11.11	Conclusions.....	388

CHAPTER 12 Scalability..... 393

12.1	Service Architectures	394
12.1.1	Awareness	394
12.1.2	Cohorts, Groups and Service Architecture.....	396
12.2	Overview of Interest Management.....	399
12.3	Spatial Models	403
12.3.1	Zone Models	404
12.3.2	Dynamic Spatial Models	406
12.3.3	Visibility Models	408
12.4	Interest Specification and Interest Management.....	411
12.4.1	Interest Expressions	411
12.4.2	Interest Management.....	413
12.4.3	Examples of Distributed Interest Management	415
12.5	Separating Interest Management from Network Architecture	418
12.5.1	Message Routing and Message Filtering	418
12.5.2	Filtering as a Pipeline	420
12.5.3	Routing and Filtering Examples	421
12.5.4	Delegating Group Communication to the Network Layer	423
12.6	Server Partitioning.....	424
12.6.1	Server Tasks and Static Partitionings	425
12.6.2	Seams and Handovers.....	428
12.6.3	Load Balancing and Dynamic Partitioning.....	430
12.7	Group Communication Services	434
12.7.1	Reflectors and Tunnels.....	434
12.7.2	Automatic Overlay Multicast	435
12.7.3	Gossiping for Peer-to-Peer Communications.....	436
12.7.4	Specific Group Communication Routing Service	437
12.8	Peer to Peer	437
12.8.1	Unstructured Peer-to-Peer Systems.....	438
12.8.2	Structured Peer-to-Peer Systems.....	439
12.8.3	Peer-to-Peer Support Using DHTs.....	442

12.8.4	Local Interest Systems	443
12.8.5	Update-Free Regions and Frontier Sets.....	446
12.9	Conclusions.....	449
CHAPTER 13	Application Support Issues.....	459
13.1	Security and Cheating	459
13.1.1	Client-Side Attacks.....	461
13.1.2	Network Level.....	463
13.1.3	Server Side	465
13.1.4	Social	465
13.1.5	Repercussions.....	466
13.2	Binary Protocols and Compression	467
13.2.1	Binary Encodings.....	467
13.2.2	Compression.....	468
13.3	Streaming	470
13.3.1	Audio and Video	470
13.3.2	Geometry and Animation	473
13.3.3	Mixing and Grouping	476
13.4	Revisiting the Protocol Decision.....	477
13.5	Persistent and Tiered Services.....	478
13.6	Clusters.....	479
13.6.1	Multidisplay Systems.....	479
13.6.2	Massive Models.....	482
13.7	Thin Clients.....	482
13.8	Conclusions.....	483
