
CONTENTS

Preface, xix

Author, xxiii

CHAPTER 1 ■ Introductory Concepts	1
1.1 INTRODUCTION	1
1.2 SCOPE OF TRANSPORT PHENOMENA	1
1.3 PRELIMINARY ASSUMPTIONS	7
1.4 EQUILIBRIUM FOUNDATIONS	9
1.5 DEFINING EQUILIBRIUM	11
1.6 FLUID STATICS	16
1.6.1 Pressure Variation in a Static Fluid—Manometers	18
1.7 BUOYANCY AND STABILITY	21
1.8 FLUIDS IN RIGID BODY MOTION	24
CHAPTER 2 ■ Fluxes, Gradients, and Transport Properties	31
2.1 INTRODUCTION	31
2.2 MOMENTUM TRANSPORT—NEWTON'S LAW OF VISCOSITY	32
2.3 ENERGY TRANSPORT—FOURIER'S LAW OF HEAT CONDUCTION	36
2.4 MASS TRANSPORT—FICK'S LAW OF DIFFUSION	38
2.5 CHARGE TRANSPORT —OHM'S LAW OF CONDUCTION	39
2.6 DRIVING FORCE—RESISTANCE CONCEPTS	43
2.7 FLUX LAWS IN TWO AND THREE DIMENSIONS	44
2.8 MECHANISTIC DIFFERENCES AMONG THE TRANSPORT PHENOMENA	50
2.9 PRIMARY AND SECONDARY FLUXES	53
2.9.1 Momentum	54
2.9.2 Energy	55

2.9.3	Mass	57
2.9.4	Charge	60
2.10	SYSTEMS INVOLVING FLUXES WITH MULTIPLE GRADIENTS	61
2.11	FAILURE OF THE LINEAR FLUX–GRADIENT LAWS	66
2.11.1	Non-Newtonian Fluids	66
2.11.2	Non-Ohmic Electronic Components	68
2.12	SUMMARY	69
CHAPTER 3 ■ Transport Properties of Materials		77
3.1	INTRODUCTION	77
3.2	VISCOSITY OF GASES	78
3.2.1	Kinetic Theory Development	78
3.2.2	Kinetic Theory and the Viscosity of a Gas	82
3.2.3	Chapman–Enskog Theory and Gas Viscosity	85
3.3	VISCOSITY OF LIQUIDS—FREE VOLUME THEORY	88
3.4	THERMAL CONDUCTIVITY OF GASES	91
3.4.1	Kinetic Theory	91
3.4.2	Chapman–Enskog Theory	93
3.5	THERMAL CONDUCTIVITY OF LIQUIDS	94
3.6	THERMAL CONDUCTIVITY OF SOLIDS	96
3.6.1	Dielectric Materials	96
3.6.2	Metallic Solids	97
3.7	DIFFUSIVITY OF GASES	98
3.7.1	Kinetic Theory Derivation	98
3.7.2	Chapman–Enskog Theory	101
3.8	DIFFUSIVITY OF LIQUIDS	102
3.9	DIFFUSION IN SOLIDS	107
3.10	CONDUCTIVITY, MOBILITY, AND RESISTIVITY	109
3.10.1	Ionic Mobility and the Conductivity of Solutions	109
3.10.2	Charge Mobility, Conductivity, and Resistivity in Solids	115
3.11	SUMMARY	117
CHAPTER 4 ■ One-Dimensional, Steady-State Diffusive Transport		123
4.1	INTRODUCTION	123
4.2	BOUNDARY CONDITIONS	124
4.2.1	Convection Preview	124

4.2.2	Equilibrium Relations and Mass Transfer Coefficients	126
4.2.3	Overall Mass Transfer Coefficients	129
4.2.4	Radiation Preview	130
4.3	BOUNDARY CONDITION CATALOGUE	131
4.4	ONE-DIMENSIONAL, STEADY-STATE DIFFUSIVE TRANSPORT	133
4.4.1	Momentum Transport—Fluid Flow	134
4.4.2	Energy Transport—Heat Transfer	136
4.4.3	Mass Transfer	140
4.5	COMPOSITE MEDIA	143
4.5.1	Planar Systems	144
4.5.2	Cylindrical Systems	154
4.5.3	Spherical Systems	157
4.6	VARIABLE TRANSPORT PROPERTIES, COUPLED TRANSPORT, AND MULTIPLE FLUXES	159
4.6.1	Composition Dependent Diffusivity	160
4.6.2	Forced Ionic Diffusion	162
4.7	SUMMARY	166
CHAPTER 5 ■ Generation		177
5.1	INTRODUCTION	177
5.1.1	Generation in Transport Processes	177
5.2	GENERATION ON THE BOUNDARY—BOUNDARY CONDITIONS	179
5.2.1	Momentum Transport	179
5.2.2	Energy Transport	180
5.2.3	Mass Transport	181
5.2.4	Charge Transport	181
5.3	ONE-DIMENSIONAL TRANSPORT WITH GENERATION AT THE BOUNDARY	182
5.3.1	Diffusion with Heterogeneous Reaction	182
5.3.2	Heat Transfer with Evaporation	184
5.4	CONSTANT GENERATION TERMS	187
5.4.1	Momentum Transport—Flow between Inclined Plates	187
5.4.2	Energy Transport—Joule Heating in an Insulated Wire	192
5.5	VARIABLE GENERATION AND COUPLED TRANSPORT	195
5.5.1	Simultaneous Diffusion and Reaction	195

5.5.2	Simultaneous Heat and Momentum Transport—Natural Convection	203
5.5.3	Diffusion and Recombination in a Semiconductor	208
5.5.4	Diffusion, Drift, and Recombination	211
5.6	SUMMARY	215
CHAPTER 6 ■ Accumulation		227
6.1	INTRODUCTION	227
6.2	LUMPED CAPACITANCE	228
6.2.1	Charge Transport—Charge Decay in a Conductor	228
6.2.2	Energy Transport—Cooling of a Rivet	232
6.2.3	Mass Transport—Adsorption by a Pellet	236
6.3	INTERNAL GRADIENTS AND GENERALIZED SOLUTIONS	241
6.3.1	Exact and Graphical Solutions	241
6.3.2	Analytic Solutions for Transient Problems with No Convection	248
6.3.2.1	<i>Diffusion and Reaction in a Cylinder</i>	248
6.3.2.2	<i>Startup of Natural Convection between Parallel Plates</i>	255
6.3.2.3	<i>Aerocapture</i>	261
6.4	SEMI-INFINITE SYSTEMS	263
6.4.1	Fluid Flow Next to a Plate Suddenly Set into Motion	264
6.4.2	Heat Transfer Analogs	268
6.4.3	Mass Transfer Analogs	271
6.5	MISCELLANEOUS TRANSIENT EXAMPLE PROBLEMS	274
6.5.1	Transient Evaporation through a Stagnant Vapor	275
6.5.2	Transient Absorption with Instantaneous Reaction	279
6.5.3	Melting and Solidification	281
6.5.4	Periodic Flow in a Rotating Cylindrical System	286
6.5.5	Pulsatile Flow	290
6.6	SUMMARY	292
CHAPTER 7 ■ Conservative Transport and Waves		305
7.1	INTRODUCTION	305
7.2	MOMENTUM TRANSPORT	306
7.2.1	Water/Tidal Waves	306
7.2.2	Acoustic Waves	316
7.3	SUMMARY	323

CHAPTER 8 ■ Transport Enhancement Using Extended Surfaces	329
8.1 INTRODUCTION	329
8.2 HEAT TRANSFER—FINNED SURFACES	330
8.2.1 Rectangular Fins—Constant Cross-Sectional Area	330
8.2.2 Cylindrical Fins—Constant Cross-Sectional Area	337
8.3 MASS TRANSFER—GILLS, LUNGS, AND SO ON	340
8.3.1 Transient Response	345
8.4 DIFFUSION AND REACTION IN A CATALYST PELLET	348
8.4.1 External Mass Transfer Resistance	355
8.4.2 Thermal Effects	356
8.5 SUMMARY	362
CHAPTER 9 ■ Multidimensional Effects, Potential Functions, and Fields	373
9.1 INTRODUCTION	373
9.2 LAPLACE'S EQUATION AND FIELDS	374
9.2.1 Revisiting the Fin Problem	375
9.2.2 Scalar and Vector Fields	380
9.3 SOLUTIONS OF LAPLACE'S EQUATION	382
9.3.1 Cylindrical Coordinates—Diffusion in a Villus	382
9.3.2 Spherical Coordinates—Heat Transfer in a Hemisphere	385
9.3.3 Laplace Equation Solutions Using Complex Variables	389
9.4 GENERATION, SOURCES, SINKS, AND POISSON'S EQUATION	397
9.4.1 Sources, Sinks, and Generation on the Boundary	397
9.4.2 Poisson's Equation and Generation	400
9.4.3 Generation as a Function of the Dependent Variable	406
9.5 TRANSIENT SYSTEMS	410
9.6 SUMMARY	413
CHAPTER 10 ■ Convective Transport: Microscopic Balances	425
10.1 INTRODUCTION	425
10.2 MOMENTUM TRANSPORT	426
10.2.1 Continuity	426
10.2.2 Momentum Balance	429
10.2.3 Mechanical Energy Balance	445
10.2.4 Vorticity Equation	447

10.3	ENERGY TRANSPORT	453
10.4	MASS TRANSPORT	463
10.5	CHARGE TRANSPORT	472
10.6	SUMMARY	479
CHAPTER 11 ■ Macroscopic or Engineering Balances		491
11.1	INTRODUCTION	491
11.2	MACROSCOPIC CONTINUITY EQUATION	492
11.3	MACROSCOPIC MOMENTUM BALANCE	495
11.4	MACROSCOPIC MECHANICAL ENERGY BALANCE—EXTENDED BERNOULLI'S EQUATION	501
11.5	MACROSCOPIC ENERGY BALANCE	511
11.6	MACROSCOPIC SPECIES CONTINUITY EQUATION	525
11.7	MACROSCOPIC CHARGED SPECIES CONTINUITY EQUATION	535
11.8	SUMMARY	538
CHAPTER 12 ■ Convective Transport on a Flat Plate (Laminar Boundary Layers)		547
12.1	INTRODUCTION	547
12.2	CONVECTIVE TRANSPORT COEFFICIENTS, C_D , h , k_c , and k_{\pm}	548
12.3	BOUNDARY LAYER DEFINITIONS	550
12.4	DERIVATION OF THE BOUNDARY LAYER EQUATIONS	554
12.5	TRANSPORT ANALOGIES	563
12.5.1	Reynolds Analogy	563
12.5.2	Chilton–Colburn Analogy and Others	564
12.6	HYDRODYNAMIC BOUNDARY LAYERS	566
12.6.1	Forced Convection, Laminar Flow	566
12.6.2	Magnetohydrodynamic Flow	573
12.7	THERMAL BOUNDARY LAYERS	576
12.7.1	Forced Convection, Laminar Flow	577
12.7.2	Free Convection on a Vertical Plate	585
12.7.3	Film Condensation on a Vertical Plate	593
12.8	MASS TRANSFER BOUNDARY LAYERS	598
12.8.1	Effects of Mass Transfer Rate	601
12.8.2	Effect of Chemical Reaction	606
12.9	SIMPLIFIED IONIC BOUNDARY LAYERS	610
12.10	SUMMARY	613

CHAPTER 13 ■ Convective Transport: Systems with Curvature	621
13.1 INTRODUCTION	621
13.2 FLOW OVER CYLINDERS	621
13.3 FLOW OVER SPHERES	632
13.4 VELOCITY PROFILES IN TUBES	641
13.5 HEAT AND MASS TRANSFER APPLICATIONS	645
13.5.1 Temperature/Concentration Profiles and Heat/Mass Transfer Coefficients	649
13.5.1.1 <i>Steady State—Constant Surface Heat Flux</i>	649
13.5.1.2 <i>Steady State—Constant Surface Temperature</i>	651
13.5.1.3 <i>Developing Profiles</i>	651
13.6 TAYLOR DISPERSION	660
13.6.1 Effect of Molecular Diffusion on Dispersion	661
13.7 SUMMARY	669
CHAPTER 14 ■ Turbulent Boundary Layers	679
14.1 INTRODUCTION	679
14.2 TURBULENT BOUNDARY LAYER STRUCTURE	680
14.3 TRANSPORT EQUATIONS IN TURBULENT FLOW	683
14.3.1 Continuity and Momentum Equations	687
14.3.2 Energy and Species Continuity Equations	688
14.4 REPRESENTING THE REYNOLDS FLUX COMPONENTS	689
14.4.1 Boussinesq Theory	689
14.4.2 Prandtl Mixing Length	692
14.4.3 Von Karman Similarity Assumption	695
14.4.4 Other Mixing Length-Type Descriptions	697
14.4.5 Numerical Simulation	698
14.5 FRICTION FACTORS AND OTHER TRANSPORT COEFFICIENTS	702
14.5.1 Friction Factors	702
14.5.2 Heat Transfer Coefficients	707
14.5.3 Mass Transfer Coefficients	712
14.6 SUMMARY	715
CHAPTER 15 ■ Radiative Transport	721
15.1 INTRODUCTION	721
15.2 PRELIMINARY DEFINITIONS	722

15.3	MAXWELL'S EQUATIONS AND HEAT TRANSFER	723
15.4	ENERGY FLUXES IN RADIATIVE SYSTEMS	728
15.4.1	Incident Radiation—Irradiation	728
15.4.2	Emitted Radiation—Radiosity	731
15.5	THE BLACKBODY	732
15.5.1	Emissive Power of a Blackbody	733
15.6	THE GRAYBODY	740
15.6.1	Kirchhoff's Law	742
15.7	VIEW FACTORS	745
15.7.1	The View Factor Integral	745
15.7.2	Relations between View Factors	747
15.8	RADIATIVE ENERGY EXCHANGE	752
15.8.1	Radiative Heat Transfer between Blackbodies	752
15.8.2	Radiative Heat Transfer between Graybodies	753
15.8.3	Radiation Shields	756
15.8.4	Radiative Heat Transfer in Three Surface Enclosures	760
15.9	SUMMARY	765

Nomenclature, 773

Appendix A: Vector Mathematics, 785

Appendix B: Mathematical Functions and Heisler Charts, 789

Appendix C: Exact Solution to the Boundary Layer Equations, 795

Appendix D: Thermal and Transport Properties of Materials, 799

Index, 815
