<i>Preface</i>	ix
<i>Acknowledgments</i>	xi

Part I INTRODUCTION

Chapter I. Developmental Psychology, Past and Present	3
A Brief Historical Sketch	4
Developmental Psychology in the 1970s	8
Developmental Psychology: Experimental or Differential?	14
Chapter II. The Age Variable in Psychological Research	18
The Focus on Change and Its Implications	18
Change as an Inherent Aspect of Behavior	22
Some Further Objections to the Use of Age as a Variable in Psychology	24
Age as a Neutral Variable: Vice or Virtue?	27
The Age Variable and the Problem of Control in Differential Studies	28
The Concept of the Developmental Function	32
Chapter III. Beyond Age-Group Comparison: A Programmatic View of the Task of Developmental Psychology	36
A Hierarchical Model for the Study of Developmental Problems	39

Part II QUANTIFICATION, DIMENSIONALIZATION, AND DESIGN

Chapter IV. Problems of Measurement and Quantification in Developmental Psychology	49
Four Prototype Cases in the Measurement of Developmental Change	50
The Qualitative Versus Quantitative Character of Developmental Change	58

Major Obstacles in the Way of Quantitative Analysis of Developmental Change	67
Units in the Measurement of Developmental Change	73

Chapter V. The Dimensionalization of Development: The Discovery and Definition of Developmental Dimensions 80

The Dimensionalization of Development Illustrated for Three Response Variables	81
The Search for Developmental Dimensions	87
Conclusion	96

Chapter VI. The Dimensionalization of Development (Continued): The Construction of Developmental Scales 97

Four Steps in the Construction of Developmental Scales	97
The Dimensionalization of Qualitative Changes	103
The Two Models of Scalogram Analysis: Cumulative and Disjunctive	110
The Use of Scalogram Analysis for the Study of Developmental Sequences (Case III Data)	116

PART III MAJOR PARADIGMS OF DEVELOPMENTAL RESEARCH

Chapter VII. Longitudinal versus Cross-Sectional Methodology 122

Cross-Sectional Designs: Shortcut or Short-Change?	124
Two-versus Three-Factor Models in the Design of Developmental Research	125
Purposes of Longitudinal Data	140
Major Drawbacks of the Longitudinal Method	144
Shortcuts to Longitudinal Data	149

Chapter VIII. The Descriptive Study of Developmental Change 158

Charting the Course of Developmental Change along Scalar Dimensions	160
Descriptive Analysis with Respect to Qualitative Change	179

Chapter IX. The Study of Developmental Stages 190

Stage as a Horizontal-Structure Concept	191
Models for the Analysis of Developmental-Stage Data	204
Prototype Response Matrices and Illustrative Examples for Each Model	215
Approaches to Data Analysis in the Study of Stages	218
Conclusion: Stages—Mirage or Reality?	236

Chapter X. Correlational Methods in the Study of Developmental Change	240
Five Levels of Elaboration in the Multivariate Study of Age Changes	241
Conclusion: The Place of Correlation Analysis in the Study of the Patterning of Developmental Change	286
Chapter XI. The Experimental Manipulation of Developmental Change	289
Four Paradigms of Experimental-Developmental Research	289
Major Problems in the Design of Research on the Effects of Controlled Experience	299
Problems of Control and Behavior Monitoring in Early Experience Research	314
The Problem of Causal Inference in Experimental Studies of Development	317
The Acquisition of Conservation: The Acceleration Approach to the Interpretation of a Developmental Phenomenon	320
Conclusion: The Dilemma of the Conservation-Training Study	331
Chapter XII. Individual Differences in Development	333
The Development of Cognitive Styles: Developmental or Differential?	334
Individual Differences as an Aspect of Developmental Functions	342
<i>The Developmental Aspect of Individual Differences</i>	347
The Study of Stability and Continuity in Behavior	358
Stability in the Multivariate Sense	368
Concluding Comments	373
Conclusion	376
References	381
