
contents

section one

introduction

chapter 1

theme and variations 1

models of man 4
private experience and behavior 9

chapter 2

research and theory 14

observation 16
the results of research 21
theory 27
science and cognition 30

section two

biological aspects of behavior

chapter 3

evolution 34

heredity 35
natural selection 41

adaptation 41
diversification 42
the evolutionary model 45
man as a mammal 46
man as a primate 48
evolution of man 49

chapter 4

development 54

evolutionary trends 55
growth 59
differentiation 59
organization 67
self-regulation 70
heredity and environment 70
two developmental models 74

chapter 5

the nervous system 76

the neuron 78
evolution of nervous systems 83
man's nervous system 88

section three

arousal and motivation

chapter 6

arousal 97

- the concept of arousal 98
- sleep 105
- wakefulness 115
- biological rhythms 117
- perspective 199

chapter 7

biological motivation 121

- programed tendencies 122
- classification of biological drives 126
- hunger 127
- curiosity 135
- brain mechanisms in motivation 137
- push and pull models of motivation 139

section four

perception

chapter 8

general issues in perception 141

- functions of perception 142
- evolutionary trends 147
- sources of stimulation 150
- sensitivity 152
- extracting information 155
- perceptual systems 159

chapter 9

nonvisual perception 160

- the basic orienting system 161
- the auditory system 164
- the haptic system 172

- taste and smell 177
- pain 180

chapter 10

vision: sensory aspects 185

- the evolution of the eye 187
- the human eye 189
- acuity 193
- night vision 196
- light 197
- color 202
- movement 204

chapter 11

vision; perceptual aspects 208

- form 209
- the third dimension 214
- constancy 217
- illusions 220
- objective and subjective approaches to perception 227
- learning and innate factors 229
- perception, movement, and position 233
- perspective 235

section five

learning

chapter 12

varieties of learning 237

- definition of learning 238
- evolutionary aspects of learning 240
- habituation and sensitization 248
- other kinds of learning 249

chapter 13

classical conditioning 255

- time relationships 258
- adaptive significance 258

extinction 260
high order conditioning 260
discrimination 261
generalization 263
association as a general principle 266

chapter 14

*simple instrumental conditioning:
positive consequences 269*

operant conditioning 271
reinforcement 274
schedules of reinforcement 280
autonomic conditioning 284

chapter 15

*simple instrumental conditioning:
negative consequences 287*

punishment 288
avoidance conditioning 292
instinctive drift and preparedness 297
learned helplessness 298
perspective 300

chapter 16

complex learning and imitation 301

immediacy 302
flexibility 303
relationship 307
observational learning 309
imitation 311

section six

cognition

chapter 17

concepts and cognitive development 317

concepts 318
cognitive development 325
perspective 338

chapter 18

language 340

words and sentences 342
language development 348
biological aspects of language 350

chapter 19

attention and memory 359

attention 361
memory 366
perspective 377

section seven

socialization

chapter 20

attachment 379

stages of attachment in mammals 381
humans 383
the sequence of attachment 385
consequences of attachments 397

chapter 21

emotion and affect 398

emotion versus affect 399
autonomic aspects of emotion 403
theories of emotion 405
emotion as a disorganizer 413

chapter 22

social motivation

sex 417
aggression 426
competence 437

chapter 23

self-control and morality 441

the stimulus-response approach 443
the cognitive approach 447

the dynamic approach: guilt and shame 452
perspective 457

section eight

the person

chapter 24

individual differences 458

traits 460

temperament 462

intelligence 473

chapter 25

the self 483

roles 485

self-esteem 495

body image 500

theories of self 503

chapter 26

abnormal behavior: description 509

criteria of abnormality 511

the normal-abnormal continuum 513

reaction systems 515

traditional categories 520

chapter 27

*abnormal behavior: causes and
cures* 525

the biological approach 527

freudian theory 532

interpersonal theory 537

self-theory and existential theory 540

the learning approach 543

general issues in therapy 549

section nine

social behavior

chapter 28

communication 552

channels 554

nonverbal human communication 557

verbal communication (speech) 563

development of verbal communication 567

chapter 29

attitudes 573

attitude change 577

cognitive dissonance 581

self-perception theory 584

prejudice 585

chapter 30

*affiliation, attraction, and
conformity* 588

affiliation 589

attraction 594

conformity 598
