

# Contents

1. <i>Origins of Differential Psychology</i>	1
Individual differences in early psychological theory	2
The personal equation in astronomy	4
Rise of experimental psychology	5
Contributions of biological science	6
Growth of statistical method	8
The testing movement in psychology	14
Emergence of differential psychology	18
Summary	19
References	20
2. <i>Distribution and Extent of Individual Differences</i>	23
Distribution of individual differences	24
The normal curve	26
Conditions that affect the shape of the distribution curve	33
Measuring the extent of variability	45
Universality of individual differences	48
Summary	54
References	54
3. <i>Heredity and Environment: Basic Concepts</i>	57
The nature of heredity	57
The nature of environment	63
Interaction of heredity and environment	67
Popular misconceptions regarding heredity and environment	73
“Structural” and “functional” characteristics	76
The concept of “unlearned behavior”	78
The measurement of “capacity”	82
Summary	83
References	85
4. <i>Heredity and Environment: Methodology</i>	87
Selective breeding	88
Normative developmental studies	93
Structural factors in behavior development	97
Effects of prior experience upon behavior	100
Statistical studies of family resemblance	115

Summary	117
References	119
5. <i>Physique and Behavior</i>	124
Popular beliefs concerning physique and behavior	125
Varieties of relationship between physique and behavior	127
Pathological conditions	130
Physiological factors	134
Sensory handicaps	142
Anatomical dimensions	147
Developmental relationships	151
Summary	153
References	155
6. <i>Constitutional Types</i>	161
Kretschmer's typology	162
Sheldon's typology	171
Typological versus dimensional systems	177
The constitutional hypothesis	181
Summary	185
References	186
7. <i>Training and Individual Differences</i>	189
Practice, coaching, and test sophistication	190
Practice and variability	194
Nursery school studies	200
Amount of schooling and intelligence	205
Longitudinal studies of populations	209
Summary	211
References	212
8. <i>Age Differences</i>	216
Cross-sectional and longitudinal approaches	217
Growth curves	221
Constancy of the IQ	231
Intellectual functioning in maturity and old age	238
Age and personality	251
Summary	258
References	260
9. <i>Family Resemblance</i>	266
Family pedigree studies	267
Correlational studies	274
Twin resemblance in psychological traits	281
The environment of twins	287
Twins reared apart	295
Foster children	300
Institutional children	306

Summary	309
References	310
10. <i>Trait Organization: Theories and Methodology</i>	317
Approaches to trait variability	318
Theories of trait organization	322
Factor analysis	330
Obverse factor analysis and other variations	336
Summary	339
References	340
11. <i>Trait Organization: Major Results</i>	343
Multiple aptitude batteries	344
The profile approach to personality description	346
Research on creativity	352
Perception and personality	353
Conditions affecting trait organization	357
Common versus individual traits	367
The concept of intelligence	368
Summary	371
References	372
12. <i>Mental Deficiency</i>	378
Criteria and levels	379
Clinical varieties and etiology	384
Physical characteristics	393
Psychological characteristics	396
Training and rehabilitation	400
Summary	406
References	408
13. <i>Genius</i>	413
Theories regarding the nature of genius	414
Methods for the study of genius	421
Characteristics of eminent men	424
The gifted child	434
The gifted child grows up	440
Summary	446
References	448
14. <i>Sex Differences</i>	452
Methodological problems	452
Biological and cultural factors	461
Sex differences in aptitudes	470
Sex differences in personality	478
Sex differences in achievement	491
Summary	496
References	498

15. <i>Social Class Differences</i>	505
Social class structure	505
Class differences in psychological development	508
Socioeconomic status and intelligence	515
Intellectual development of isolated groups	522
Urban-rural and other regional differences	525
Specificity of social class differences	531
Summary	534
References	535
16. <i>Race Differences: Methodological Problems</i>	542
The concept of race	543
Selective factors	546
Group differences and the individual	548
Cultural differences	550
Bilingualism	558
Cross-cultural testing	561
Levels of cultural differentials	568
Summary	569
References	570
17. <i>Race Differences: Major Results</i>	576
Descriptive surveys of race differences	576
Psychological studies of race mixture	578
Group comparisons at infant and preschool level	580
Regional differences and migration	584
Cross-comparisons of cultural and biological groups	588
Research on culture and personality	592
Summary	598
References	599
18. <i>Culture and the Individual</i>	604
Cultural frames of reference	605
Developmental stages and the cultural setting	610
Abnormality and culture	614
Language as a cultural factor in behavior	619
"Human nature" in different cultures	622
The individual as a member of multiple groups	625
Summary	628
References	630
<i>Author Index</i>	635
<i>Subject Index</i>	649
