

Contents

Titles, subsections, and page numbers of Classic Articles are given in italics.

Preface

1. Introduction and Overview: De Anima and Animals	1
Physical Realizability	4
The Intelligent Cockroach	7
Overview	10
2. The Sherringtonian Reflex	16
<i>The Integrative Action of the Nervous System</i>	
<i>Sir Charles Sherrington</i>	17
<i>Introductory—Coordination of the Simple Reflex</i>	17
<i>The Simple Reflex</i>	22
<i>Coordination in the Simple Reflex</i>	23
Sherrington's Experiments	31
<i>Summation</i>	39
Nonlinear Summation	41
<i>Irreversibility of Direction of Conduction</i>	43
Inhibition	47
Summary	49

3. Sherrington's Combinatorial Principles	51
The Principle of the Common Path	51
Principles Governing Combination	55
Overuse of the Chaining Principle	67
Summary	68
4. Von Holst's Coupled Oscillators	69
Endogenous Rhythmicity	69
Amplitude, Period, and Phase	71
Superimposition	73
The Magnet Effect	78
<i>On the Nature of Order in the Central Nervous System</i>	
<i>E. von Holst</i>	81
<i>Conclusions</i>	107
Recent Work	108
Superimposition and Fourier Synthesis	109
5. The Role of Coupled Oscillators in Locomotion	111
Complex Units of Behavior	111
<i>Insect Walking</i>	
<i>Donald M. Wilson</i>	115
<i>A Descriptive Model</i>	116
<i>Changes in Walking Pattern</i>	
<i>Due to Amputation</i>	122
<i>Mechanism of Coordination</i>	126
<i>Leg Reflexes and Evidence for</i>	
<i>Proprioceptive Control of Locomotion</i>	128
<i>Reflex Models for Walking Coordination</i>	130
The Walking System: Recent Analysis	135
6. Servomechanisms:	
The Control of Taxes in the Coastal Snail	143
Servomechanisms	143
<i>On Geotaxis and Phototaxis in Littorina</i>	
<i>Gottfried Fraenkel</i>	149
<i>The Geotaxis</i>	150
<i>Geotaxis and Phototaxis</i>	154

<i>The Resistance of Littorina</i>	159	
<i>The Life of Littorina Neritoides in Nature</i>	159	
<i>Summary</i>	161	
Potential and Depotential	161	
7. Reafference and Efference Copy		166
The Optokinetic Reaction	166	
Exafference and Reafference	168	
Efference Copy and Corollary Discharge	170	
Expectation	175	
<i>The Reafference Principle</i>		
<i>E. von Holst with Horst Mittelstaedt</i>		176
<i>Introduction</i>	176	
<i>An Introductory Example</i>	178	
<i>More Detailed Formulation of the Problem</i>	180	
<i>More General Formulation of</i>		
<i>the Reafference Principle</i>	186	
<i>Application of the Reafference Principle</i>		
<i>to Different Neuromotor Systems</i>	189	
<i>Conclusions</i>	207	
8. The Hierarchical Structuring of Action		210
Coherent Combinations	210	
Weiss's Approach	213	
In Defense of Connectionism	214	
<i>Self-Differentiation of</i>		
<i>the Basic Patterns of Coordination</i>		
<i>Paul Weiss</i>		217
<i>The Problem of Coordination</i>	217	
<i>The Theories of Coordination</i>	223	
<i>Summary</i>	231	
<i>The Experimental Study of Coordination</i>	232	
<i>An Analysis of Coordination in Amphibia</i>	241	
<i>Myotypic Response as Assay Method</i>	250	
<i>Unmodifiability of Locomotor Scores</i>	254	
<i>Coordination in Mammals</i>	264	
<i>Conclusions</i>	268	
<i>Summary</i>	274	
Diagramming the Hierarchy	275	

X CONTENTS

9. Manifestations of Hierarchical Organization in Action	288
Review of Principles	288
Transection Studies	292
Brain Stimulation Studies	299
The Behavior of Hybrids	306
Wickens Revisited	309
Operant Conditioning	311
Development and Recovery	316
10. Central Motive States	320
Selective Potentiation and the Drive Concept	320
The Origins of Central Motive States	323
Labile Versus Fixed Hierarchies	327
The Role of Learning	329
Summary	331
11. Representation of the World and the Organization of Action	335
Knowledge and Action	335
Insightful Detour Behavior in the Rat	337
Cognitive Maps in the Digger Wasp	345
Getting Rid of the Homunculus	350
The Deutsch Model	350
12. Some Recent Trends	360
Links with Cognitive Psychology	360
The Turvey Theory	361
Skills and Schemas	367
Developmental Analysis of Human Coordination	375
Maps and the Brain	381
Aligning the Map with the Perceived Space	385
Summing Up	390
Glossary	395
References	403
Author Index	421
Subject Index	427
