1	Introduction to information theory	1
	1.1 Introduction	1
	1.2 Entropy of discrete sources	1
	1.3 Mutual information and discrete memoryless channels	4
	1.4 Source coding for discrete sources	5
	1.4.1 The Kraft inequality	6
	1.4.2 Huffman coding	7
	1.5 Arithmetic codes	8
	1.5.1 Ideal arithmetic coding	9
	1.5.2 Finite-precision arithmetic coding	10
	1.5.3 Decoding arithmetic codes	11
	1.5.4 Universal codes	12
	1.6 Entropy of images	13
	1.7 Notes	14
	<i>Exercises</i>	15
	<i>References</i>	16
2	Finite-state sources	17
	2.1 Introduction	17
	2.2 Finite-state sources	17
	2.2.1 Constrained sequences	18
	2.2.2 Counting constrained sequences	18
	2.3 Markov sources and Markov chains	19
	2.3.1 Stationary distribution	20
	2.3.2 Reversal of a Markov chain	20
	2.3.3 Markov sources	20
	2.4 Entropy of Markov chains and Markov sources	21
	2.4.1 Stochastic processes	21
	2.4.2 Entropy of Markov chains and Markov sources	21
	2.5 Maximum-entropy Markov chains	22
	2.6 Source coding for Markov chains	24
	2.7 Elementary two-dimensional sources	24

2.7.1	Structure in two-dimensional sources	24
2.7.2	Bands of finite height	26
2.7.3	Causal models	26
2.8	Pickard random fields	28
2.8.1	Independence assumptions	28
2.8.2	Probability on a rectangle	29
2.8.3	Constructing a two-dimensional random field from a Markov chain	29
2.8.4	Symmetric Pickard random fields	32
2.9	Markov random fields	33
2.10	Notes	34
	<i>Exercises</i>	34
	<i>References</i>	35
3	Channels and linear codes	36
3.1	Introduction	36
3.2	Channel capacity and codes	36
3.2.1	Discrete memoryless channels and capacity	36
3.2.2	Codes for discrete memoryless channels	38
3.3	Linear codes	39
3.3.1	Linear codes and vector spaces	39
3.3.2	Decodable errors	40
3.3.3	Hamming codes and their duals	42
3.3.4	Cyclic codes and generator polynomials	43
3.3.5	Orthogonal sequences and arrays for synchronization	44
3.3.6	Product codes	45
3.4	Error probability and error exponents	46
3.4.1	The union bound for block codes	46
3.4.2	A bound for rates close to capacity	47
3.4.3	Performance of specific codes on the BSC	49
3.5	Other applications of linear codes in information theory	50
3.5.1	Rate-distortion functions	50
3.5.2	Encoding of correlated sources	51
3.6	Notes	52
	<i>Exercises</i>	52
	<i>References</i>	53
4	Reed–Solomon codes and their decoding	54
4.1	Introduction	54
4.2	Finite fields	54
4.3	Definition of Reed–Solomon codes	55
4.4	Decoding by interpolation	56
4.5	Decoding from syndromes	58
4.6	Reed–Solomon codes over the fields $F(2^m)$	61

4.7	Faster decoding methods	62
4.8	Reed–Solomon codes and q -ary channels	64
4.9	Notes	65
	<i>Exercises</i>	65
5	Source coding	66
5.1	Context-based adaptive coding of sources with memory	67
5.1.1	Two-part coding	68
5.1.2	Context-adaptive code length	68
5.1.3	Context-based adaptive image coding	70
5.1.4	Context-based coding of binary images	71
5.2	Universal coding	72
5.2.1	Lempel–Ziv coding	73
5.2.2	Algorithm Context	76
5.3	Dynamic context algorithms	80
5.4	Code lengths and estimation of entropy	82
5.5	Notes	83
	<i>Exercises</i>	84
	<i>References</i>	85
6	Information in two-dimensional media	86
6.1	Introduction	86
6.2	Images and documents such as two-dimensional media	86
6.2.1	Mixed media and document layout	87
6.2.2	Compound documents	88
6.3	Media components	88
6.3.1	Printed text	89
6.3.2	Maps and line drawings	89
6.3.3	Natural images	93
6.4	Context-based coding of two-dimensional media	96
6.4.1	Lossless context-based coding	97
6.4.2	Context quantization	98
6.4.3	Lossy context-based coding	101
6.5	Context-based multiple representations	103
6.5.1	Refinement coding for quality progression	103
6.5.2	Multi-resolution context-based coding	104
6.5.3	Context-based coding of maps and layered graphics	105
6.6	Model-based coding of two-dimensional document components	107
6.6.1	Symbol-based coding of text	108
6.6.2	Coding of halftone images	109
6.7	Image coding	110
6.7.1	Predictive image coding	110
6.7.2	Transform-based image coding	113
6.7.3	Subband- and wavelet-based image coding	114

6.8	Coding of compound documents	116
6.8.1	Coding document segments	116
6.8.2	Coding mixed raster content	117
6.9	Notes	117
	<i>Exercises</i>	118
	<i>References</i>	118
7	Constrained two-dimensional fields for storage	119
7.1	Introduction	119
7.2	Two-dimensional fields with a finite constraint	119
7.3	Counting two-dimensional patterns with constraints	121
7.4	Bands of finite height	123
7.4.1	Bounds for first-order-symmetric constraints	124
7.4.2	Markov chains on bands	126
7.5	Causal models in two dimensions	127
7.5.1	Basic concepts	127
7.5.2	Bit-stuffing in two dimensions	128
7.6	Pickard random fields	128
7.6.1	General Pickard random fields	129
7.6.2	Remarks on causal models	130
7.7	Markov random fields with maximum entropy	131
7.8	Block Pickard construction	132
7.8.1	Constructing Pickard random fields from two Markov chains	133
7.8.2	Block Pickard random fields for two-dimensional constraints	136
7.8.3	Block Pickard random fields – no isolated bit	137
7.8.4	Tiling with dominoes using Pickard random fields	140
7.9	Notes	142
	<i>Exercises</i>	143
	<i>References</i>	145
8	Reed–Solomon codes in applications	146
8.1	Introduction	146
8.2	Binary images of Reed–Solomon codes	146
8.3	Concatenated codes	148
8.4	Product codes	149
8.5	Iterated decoding of product codes	150
8.6	Graph codes for two-dimensional error-correction	152
8.6.1	Bipartite graphs from geometries	153
8.6.2	Minimum distances of graph codes	154
8.6.3	Graph codes as two-dimensional arrays	155
8.7	Errors in two-dimensional media	155
8.7.1	Defects in physical media or in the writing/printing process	155

8.7.2	Degradation of the media in use	156
8.7.3	Degradation due to loss of alignment or synchronization	156
8.8	Notes	156
	<i>Exercises</i>	157
	<i>Appendix A Fast arithmetic coding</i>	158
	<i>Appendix B Maximizing entropy</i>	160
	<i>Appendix C Decoding of Reed–Solomon code in $F(16)$</i>	163
	<i>Index</i>	170
