Editor's preface	XI
Introductory chapter	
A three-dimensional strain energy density factor theory of crack propagation	<i>G. C. Sih</i> xv
Chapter 1	
Internal circular cracks	1
1.1 Definition of stress-intensity factors	1
1.2 Normal and shear tractions	2
1.3 Torsional loads	7
1.4 General loading	9
1.5 Thermal stresses	16
1.6 Appendix: Circularly-shaped crack solutions	20
A1.1 Stretching and shearing	20
A1.2 Uniform load over a circular area	21
A1.3 Equal and opposite concentrate loads	21
A1.4 Concentrated ring load	22
A1.5 Uniform shear load over a circular area	22
A1.6 Torsional loading	23
A1.7 Inclined shear stresses	24
A1.8 Concentrated forces at a point on the normal axis	25
A1.9 Equal and opposite concentrated forces on the normal axis	29
A1.10 Two unequal concentrated forces located on the normal axis	31
A1.11 A pair of concentrated forces normal to crack surface	32
A1.12 A pair of concentrated radial forces	33

- A1.13 A pair of concentrated tangential forces 34
- A1.14 Embedded ring-shaped crack 35
- A1.15 Two parallel penny-shaped cracks 36
- A1.16 Uniform temperature on a circular crack 37
- A1.17 Heat flux on a circular crack 38
- A1.18 Insulated penny-shaped crack 39
- A1.19 Two constant temperature parallel circular cracks 40
- A1.20 Heat flow around two parallel insulated circular cracks 41

References 42

Chapter 2

External circular cracks

44

- 2.1 Crack geometry 44
- 2.2 Axially symmetry loading 45
- 2.3 Torsional deformation 48
- 2.4 Loadings with radial and circumferential variations 50
- 2.5 Thermally induced stresses 53
- 2.6 Appendix: Solutions for external circular cracks 55
 - A2.1 Uniform stretching and shearing 55
 - A2.2 Concentrated ring load 57
 - A2.3 Radially decaying load 57
 - A2.4 Torsional loading 58
 - A2.5 Resultant forces and moments 59
 - A2.6 Concentrated forces at a point on the normal axis 59
 - A2.7 Equal and opposite concentrated forces on the normal axis 60
 - A2.8 Two unequal concentrated forces located on the normal axis 65
 - A2.9 Concentrated normal forces on the crack surfaces 67
 - A2.10 Concentrated radial forces 68
 - A2.11 Heating of an external circular crack 69
 - A2.12 Specified temperature gradients 72

References 73

Chapter 3

Embedded elliptical cracks 74

- 3.1 Crack border stress field 74
- 3.2 Normal tractions 78
- 3.3 Normal displacements 82
- 3.4 Shear loading 84
- 3.5 Thermal stresses 87
- 3.6 Limiting cases 92
- 3.7 Appendix A: Solutions for elliptical cracks 93
 - A3.1 Uniform stretching and shearing 93
 - A3.2 Beam bending 97
 - A3.3 Quadratic normal load 99
 - A3.4 Cubic normal traction 100
 - A3.5 Fourth degree polynomial loading 101
 - A3.6 Sixth degree polynomial loading 102
 - A3.7 Torsional load 105
 - A3.8 Uniform heating of crack surface 106
 - A3.9 Ellipsoidal heat distribution 108
- 3.8 Appendix B: Evaluation of J_{mn} 108
- 3.9 Appendix C: Derivatives of $V^{(n)}$ 110

References 116

Chapter 4

External elliptical cracks 118

- 4.1 Crack plane outside an ellipse 118
- 4.2 Symmetric loading 120
- 4.3 Skew-symmetric loading 125
- 4.4 Specified displacement 131

References 133

Chapter 5

Semi-infinite plane cracks	134
5.1 Plane crack	134
5.2 Basic equations	135
5.3 Symmetric normal loads	137
5.4 Anti-symmetric shear normal to crack edge	142
5.5 Anti-symmetric shear parallel to crack edge	151
5.6 Thermal stress distribution	161
5.7 Appendix: Stress intensity factor solutions for a semi-infinite plane crack	168
A5.1 Concentrated forces at an arbitrary location	168
A5.2 Uniform loads over a rectangular area	169
A5.3 Line load parallel to crack edge	171
A5.4 Line load normal to crack edge	172
A5.5 Concentrated forces inside the cracked solid	174
A5.6 Temperature applied over a rectangular area	175
References	176

Chapter 6

Dissimilar material crack problems	177
6.1 Cracks in dissimilar media	177
6.2 Interface penny-shaped crack	177
6.3 Torsion of multi-layered system	189
6.4 Axisymmetric deformation of layered system	197
6.5 Off-centered crack in layered cylinder	205
6.6 Thermal stresses in dissimilar media	211
References	216

Chapter 7

Effects of free boundaries	218
7.1 Boundary effect	218
7.2 Penny-shaped crack parallel to free surface	218
7.3 Penny-shaped crack normal to boundary	237
7.4 Embedded elliptical crack normal to boundary	241
7.5 Internal penny-shaped crack in a plate	255
7.6 External circular crack in a plate	267
7.7 Penny-shaped crack in an elastic sphere	270
7.8 Circular cylinder with a concentric penny-shaped crack	294
7.9 Hollow cylinder with an external crack	318
7.10 Appendix: Evaluation of integrals	330

References 333

Chapter 8

Cracks in anisotropic materials	336
8.1 Anisotropic elasticity	336
8.2 Penny-shaped crack in transversely isotropic solids	339
8.3 External ring cracks	348
8.4 Orthotropic laminates with penny-shaped cracks	349
8.5 Sandwiched layer	354
8.6 Transversely isotropic solid with an elliptical crack	360
8.7 Displacements and stresses near crack border	369
8.8 External elliptical cracks	373
8.9 Bodies with cylindrical anisotropy	373
8.10 Appendix	376

References 380

Chapter 9

Cracks in nonhomogeneous materials 382

- 9.1 Material nonhomogeneity 382
- 9.2 Axial variation of shear modulus 382
- 9.3 Modified axial nonhomogeneity 399
- 9.4 Radial variation of shear modulus 404

References 409

Chapter 10

Dynamic stresses around a penny-shaped crack 410

- 10.1 Dynamic stresses 410
- 10.2 Normal compression and radial shear waves 411
- 10.3 Torsional waves 422
- 10.4 Transient response 427
- 10.5 An expanding penny-shaped crack 439
