

Table of Contents

Summary	7
1. Introduction	8
1.1. <i>Sturgeons as unique biological and ecological ecosystem entities</i>	8
1.2. <i>General environmental threats to population decline and risk for extinction</i>	9
1.3. <i>Biological characteristics of the Common sturgeon</i>	9
1.3.1. State of knowledge on the historical range of <i>A. sturio</i>	10
1.3.2. Sequential decline of the populations within range watersheds.....	11
1.4. <i>Driving forces for conservation</i>	12
1.4.1. Application of conservation guidelines.....	14
1.4.2. Potential options for sturgeon remediation	14
1.4.3. Political background for sturgeon remediation in Germany and the EU.....	15
1.4.4. To split a hair: Terminology considerations on sturgeon re-establishment	16
1.5. <i>Historic conservation and enhancement approaches</i>	17
1.6. <i>Organisational prerequisites for a concerted remediation</i>	18
1.7. <i>Scope of the remediation programme</i>	18
1.7.1. Verification of species status on population level.....	19
1.7.2. Development of ex-situ stocks	20
1.8. <i>Objectives and scientific working hypothesis</i>	24
2. Results	27
2.1. <i>Publications and submitted manuscripts addressing the objectives of the working hypothesis</i>	27
2.1.1. Characterization of the species.....	27
2.1.2. Historic reasons for the decline.....	27
2.1.3. Testing substrate requirements for juveniles.....	28
2.1.4. Identification of critical habitat availability for early life stages in the Oder River catchment	28
2.1.5. Verification of transport technology for <i>A. oxyrinchus</i> broodstock.....	29
2.1.6. Potential threats for re-establishment: impacts of Exotic sturgeons	31
2.1.7. Anticipated Fisheries impacts on recovery measures and potential management implications.....	31
2.2. <i>Application of the results</i>	32
2.3. <i>Publications</i>	33
2.3.1. Species characterization	33
2.3.2. Reasons for the decline of the species.....	49
2.3.3. Substrate selectivity of early life phases	61
2.3.4. Localization of habitat for early life phases.....	77
2.3.4.1. Initial development of a habitat survey	77
2.3.4.2. Expansion of the habitat survey in the Oder River catchment.....	89
2.3.5. Establishment of air transport techniques for adult sturgeon.....	101
2.3.6. Presence and effects of non-indigenous sturgeon species in open waters	115
2.3.6.1. Initial data assessment.....	115
2.3.6.2. The role of international trade in the occurrence of exotic sturgeons... ..	123
2.3.7. Development of alternative fisheries techniques.....	129
2.3.8. Summarizing overview	137

3. Discussion.....	147
3.1. Verify species identity and determine the feasibility to employ model species for experiments overcoming initial deficiencies in basic knowledge	148
3.1.1. Identification of specimens to be selected for remediation.....	148
3.1.2. Characterization <i>A. sturio</i> / <i>A. oxyrinchus</i>	149
3.2. Ecological and biological characteristics of the species.....	154
3.2.1. Utilization of model species to determine common requirements and thereby identify common threats	155
3.3. Determine the reasons for the historic decline of populations and verify the degree of their persistence.....	157
3.3.1. Fisheries	157
3.3.2. Habitat loss.....	158
3.3.3. Water quality	159
3.3.4. Mechanical stress	160
3.3.5. Climate change	161
3.3.6. Effects of the population decline and consequences for reproductive success.	162
3.3.7. Implications of factors contributing to the decline for the management plan... ..	162
3.4. Identification of species-specific traits in behaviour and physiology linked to environmental conditions for reproductive success.....	164
3.4.1. Habitat requirements in early life stages.....	164
3.4.2. Relevance of the findings for future actions	165
3.5. Determine availability of critical habitat for early life stages in rivers historically being important.....	166
3.5.1. Habitat assessment	166
3.5.2. Assessment of habitat quality for reproduction and early life stages.....	167
3.5.3. Verification of the criteria utilized for the assessment of habitat quality	167
3.5.4. Suitability of the habitat identified.....	168
3.5.5. Alternative strategies to assess potential of rivers for remediation of sturgeon populations	169
3.5.6. Requirements to preserve/improve the available habitat (Management implications).....	169
3.6. Identify and adapt methods for broodstock development for endangered species as basis for subsequent reproduction and release	171
3.6.1. Identification of potential donor populations.....	171
3.6.2. Ex situ conservation.....	172
3.6.3. Adaptation of transport techniques	172
3.6.4. Application of the results.....	173
3.7. Development and evaluation of methods circumventing pertaining problems - such as fisheries pressure or introduction of exotic sturgeon species - to provide support measures for management	174
3.7.1. Representative character of the data obtained.....	175
3.7.2. Feasibility to apply alternative fisheries techniques	176
3.7.3. Effectiveness of the technique applied.....	177
3.7.4. Socio-economic conditions on influencing the applicability	178
3.7.5. Requirements to substitute the present techniques.....	178
3.8. Risks for remediation associated with the introduction, culture, trade and release of exotic sturgeon species.....	177
3.8.1. Limitations to data acquisition.....	177
3.8.2. Potential impact of exotics on remediated stocks	178
3.8.3. Concurrence for feed.....	178

Table of Contents

4. Conclusions	185
4.1. <i>Status of species identification and the feasibility to utilize model species.....</i>	183
4.2. <i>The identification of historic reasons for the decline of the species abundance and the degree to which these impacts persist today are considered key factors to develop concepts and strategies for remediation measures.</i>	184
4.3. <i>Substrate preferences of early life history stages indicate essential habitat characteristics.....</i>	186
4.4. <i>In-situ identification of critical habitats for early life stages</i>	187
4.5. <i>Transport stress has important implications for the viability of transferred specimens and thereby may determine the success of the programme in building up the brood stocks</i>	187
4.6. <i>Identifying criteria that point to potential threats for re-establishment:</i>	188
4.7. <i>Exotic sturgeon species and their potential interaction with conservation measures</i>	189
5. Outlook	190
6. Acknowledgements	191
7. References	192
