List of Figures xi

Preface xii

1 A Brief History of Attitude Research 1

The concept of attitude 1
Attitudes can be measured 2
Attitudes have meaning 4
Attitudes can be changed 10
Attitudes can be organized 14
Attitudes can be reappraised 17
Attitudes (sometimes) predict behaviour 19
Attitudes involve selective information-processing 25
Affect and cognition can influence each other 27

2 Mind and Body 32

Knowing oneself 32
Reason and evidence 32
Descartes and the search for certainty 35
'Clear and distinct' ideas 38
A mind 'wholly distinct from the body'? 41
Disembodied thoughts? 42
A mind that 'has need of no place'? 43
Mind–brain identity 45
Levels of description 46
Brain functions and mental statements 47
In search of post-dualist theories 49

3 Experience and Identity **52**

Truth and observation 52
Locke and the reality of experience 53
Continuous existence and identity 55
Hume and the principles of association 58
No simple idea of self 61
The self: distinctive or elusive? 65
The self and the stream of consciousness 66
Identity and change 68

4 Mind and Behaviour **72**

A penny for your thoughts 72
The behaviourist challenge 73
How much do I get for a penny? 76
Attribution and inference 78
Dualism and behaviourism in attribution theory 80
Inferring feelings: A fallacy in one act 83
Are our feelings real? 87

5 Observation and Reality **89**

Is there anything out there? 89
Berkeley's cherry 90
The discontinuity of energy 92
The uncertainty principle 94
Quantum metaphysics 96
The two-slit experiment 99
Schrödinger's cat 102
Common sense and common reality 107

6 Expression and Shared Experience **110**

Aboutness 110
Describing experience 113
The relativity of experience 114
Meaning and context 116
Bodily sensations 118
Thinking about and thinking that 119
Knowing that and knowing how 122
Knowledge and shared reality 126

7 Attitudes and Social Reality 129

The social and the individual 129
The acquisition of attitudes 131
The acquisition of verbal expressions of attitude 132
The acquisition of expectancies 134
Attitudinal experience 136
Evaluation and description 137
The relativity of attitude measurement 141
Evaluative language and attitude judgement 143
The expression of attitude 145
Language and categorization 147
Consistency as a social product 148
Self-consistency 150

8 Changing Shapes 153

The patterning of attitude 153
Attitude space 156
Semantic space 156
Phase space 157
Attitudes: singular or multiple? 159
Humean attitudes 160
Curves and contours 163
Dynamics and attractors 164
Stability and instability 167
Multiple attractors and the route to chaos 168
Natural complexity 171
Fractals 173
Infinite outlines in a finite space 176
The fractal mind 180
Attitudes as attractors 182

9 The Makings of Mind 186

Minds and machines 186
Serial processing 187
How the brain works 189
Parallel processing 191
Neural nets 193
Multiple layers and hidden units 195
Rules and recognition 197
Nets that can be trained 199

Content-addressable memory 201
Nets that find things out 202
Patterns and dynamics 204
Attractors and neural networks 205
The need for chaos 207
Non-linearity in neural networks 209
Carving the landscape 210

10 The Emergent Self 214

Social connections 214
Simulating social impact 215
Personal boundaries 218
Transmitting thoughts 220
Mental action at a distance 221
Patterns of experience 223
Which dimensions? 225
Points on the map 227
Synchrony 229
The coordination of awareness 231
Fictitious identity 234
Self-reflection 236
Attitudes: a final word 241

Author Index 253

List of Figures

1.1	Semantic space for Eve White	7
1.2	Semantic Space for Eve Black	8
1.3	Semantic space for Jane (after therapy)	9
1.4	The three-component model of attitude organization	21
1.5	The theory of reasoned action	22
5.1	Pattern of diffraction of monochromatic light passing through a single slit	100
5.2	Pattern of diffraction of monochromatic light passing through two slits	101
5.3	Schrödinger's cat	103
8.1	Attitude space as a linear continuum	154
8.2	Attitude space as a linear continuum with extraneous forces	155
8.3	Phase space. The entire state of a physical system is represented by a single point.	159
8.4	A non-linear attitude space	163
8.5	A pendulum in ordinary space and in phase space	166
8.6	The Necker cube	168
8.7	The Koch snowflake	175
8.8	The Mandelbrot set	177
8.9	Cross-section of a 'hillside' to represent behavioural attractors	181
9.1	A schematic neuron	190
9.2	A schematic assembly of neurons capable of parallel processing	194
9.3	A neural net represented as a matrix	194
9.4	A neural net to perform the logical function of the 'exclusive OR'	196
