

CONTENTS

PREFACE	xiii
LIST OF ACRONYMS	xvii
COMULATIVE LISTING OF VOLUMES IN SERIES	xix
CHAPTER 1 INTRODUCTION	1
1.1. Why Gas Sensors?	1
1.2. Organization of the Book	2
References	3
CHAPTER 2 INTERACTIONS OF GASES WITH SURFACES: THE H₂ CASE	5
2.1. Introduction to Catalysis	5
2.2. Physisorption and Chemisorption	6
2.3. The Change of Work Function	8
2.4. The Palladium–Hydrogen System	8
2.4.1. The Langmuirian Model in an Inert Atmosphere	11
2.4.2. The Langmuirian Model in the Presence of Air	13
2.5. Features of Hydrogen–Surface Interactions	15
2.6. Why Hydrogen Detection?	16
References	16
CHAPTER 3 GAS-SENSITIVE SOLID STATE SEMICONDUCTOR SENSORS	19
3.1. Introduction	19
3.2. Metal–Semiconductor (Schottky Barrier Devices)	20
3.3. Metal–Insulator–Semiconductor (MIS) Devices	28

3.3.1.	The MIS Capacitor	28
3.3.2.	The MOSFET	36
3.4.	Surface-Film Devices	43
3.4.1.	Bulk Conductivity Sensors	47
3.4.2.	Surface Conductivity Sensors	52
3.5.	Classification and Performance of Semiconductor Gas Sensor Devices	56
3.5.1.	Classification Scheme for Semiconductor Gas Sensors	56
3.5.2.	MIS Capacitor Chemical Gas Sensors	58
3.5.3.	MIS Field Effect Transistor (FET) Sensors	83
3.5.4.	MIS Diode Sensors	106
3.5.5.	Metal-Semiconductor (Schottky Diode) Sensors	120
	References	125
CHAPTER 4	PHOTONIC AND PHOTOACOUSTIC GAS SENSORS	133
4.1.	Introduction	133
4.2.	Photonic Gas Sensors	133
4.2.1.	Reflection Spectroscopic Sensors	134
4.2.2.	Spectroscopic Ellipsometry Sensor	137
4.2.3.	Surface Plasmon Resonance Spectroscopic Sensors	140
4.2.4.	Infrared Spectroscopic Sensors	144
4.2.5.	Photoemission Spectroscopic Sensor	147
4.3.	Photoacoustic Gas Sensors	149
	References	160
CHAPTER 5	FIBER-OPTIC SENSORS	163
5.1.	Introduction and Historical Perspective	163
5.2.	Theoretical Background	164
5.3.	Fiber-Optic Instrumentation	166
5.4.	Measurement Techniques	167
5.4.1.	Absorptance Measurements	167
5.4.2.	Reflectance Measurement	167

5.4.3.	Luminescence (or Fluorescence) Measurements	168
5.5.	Fiber-Optic Gas Detection	168
5.5.1.	Hydrogen Detection	168
5.5.2.	Chemisorption Measurements	172
5.6.	Comparison Between Purely Electronic and Fiber-Optic Sensors	173
5.7.	Other Applications of Fiber-Optic Sensors	175
	References	175
CHAPTER 6	PIEZOELECTRIC QUARTZ CRYSTAL MICROBALANCE SENSORS	179
6.1.	Introduction and Historical Perspective	179
6.2.	Theory of the PQCM	181
6.2.1.	Equivalent Electronic Circuit of the Quartz Crystal	181
6.2.2.	Thermodynamic Considerations of the Quartz Crystal	182
6.2.3.	Wave Equation of the Piezoelectric Quartz Crystal	185
6.2.4.	Sauerbrey's Theoretical Approach	189
6.3.	Piezoelectric Experimental Instrumentation	192
6.4.	PQCM for Gas Detection: Experimental Results	194
6.4.1.	Hydrogen Bulk Piezoelectric Detection	196
6.4.2.	Halothane and Other Hydrocarbon Bulk Piezoelectric Detection	203
6.4.3.	Sulfur Dioxide Bulk Piezoelectric Detection	206
6.4.4.	Detection of Other Gases	207
6.5.	Array of Piezoelectric Quartz Crystal Microbalances	211
6.6.	Other Applications of the PQCM	213
	References	214
CHAPTER 7	SURFACE ACOUSTIC WAVE SENSORS	219
7.1.	Introduction and Historical Perspective	219

7.2.	Theory of SAW Devices	220
7.2.1.	Rayleigh SAW Sensors	220
7.2.2.	Plate-Mode Structures	226
7.2.3.	Transverse Wave Elements	228
7.3.	SAW Experimental Instrumentation	229
7.4.	SAW for Gas Detection: Experimental Results	232
7.4.1.	Hydrogen Detection	232
7.4.2.	Detection of Ammonia	239
7.4.3.	Detection of Carbon Dioxide	240
7.4.4.	Detection of Humidity	242
7.4.5.	Detection of Other Gases	242
7.5.	Analytical Comparison of the Main Piezoelectric Devices	245
7.6.	Array of SAW Devices: Pattern Recognition	245
7.7.	Other Applications of SAW Devices	246
	References	248
CHAPTER 8	PYROELECTRIC AND THERMAL SENSORS	253
8.1.	Introduction and Historical Perspective	253
8.1.1.	Pyroelectricity: A 2300-Year History	253
8.1.2.	Pyroelectricity: Introduction to Gas Sensors	254
8.2.	Theory of Pyroelectric Signal Generation	256
8.3.	The dc Pyroelectric Chip: Pd–LiTaO ₃	259
8.3.1.	Experimental Apparatus	259
8.3.2.	Ultimate Concentration Sensitivity	261
8.3.3.	Results and Discussion	261
8.4.	The dc Pyroelectric Chip: Pt–PZFTU–Au	264
8.4.1.	Experimental Apparatus	264
8.4.2.	Results and Sensor Performance	264
8.5.	The ac Photopyroelectric Thin-Film Detector: Pd–PVDF–Al	266
8.5.1.	Experimental Apparatus and Details	266
8.5.2.	Analysis of the Photopyroelectric Response	271
8.5.3.	Experimental Results: Hydrogen Detection in Nitrogen	272

8.5.4.	Experimental Results: PPE Detection of Hydrogen/Oxygen Mixtures	284
8.6.	Signal Drifts and Stabilization of the PPE Device	287
8.6.1.	Nature of the PPE Signal Drift	287
8.6.2.	Temperature and Background Drift	289
8.7.	Photothermal Electrostatics of the Metal–Pyroelectric Junction	290
8.7.1.	[H]-Dependence of $\sigma_f^{(PPE)}(\omega, t)$	295
8.7.2.	ω -Dependence of $\Delta\phi_0$ [H]	295
8.8.	Pd–Mica–Au Capacitive Thermal-Wave Sensor	299
8.9.	Other Applications of Pyroelectric Sensors	302
8.10.	General Conclusions	304
	References	306
CHAPTER 9	FUTURE TRENDS	309
	References	311
APPENDIX	HYDROGEN GAS DETECTORS	313
	References	315
INDEX		317
