Abstract	9
Zusammenfassung	13
Structure and nomenclature	19
General introduction	21
Part 1: Speech Production	25
1 Introduction	25
2 Literature	27
2.1 Passive movement hypotheses – Coupling of articulatory structures	28
2.1.1 Universality	28
2.1.2 Influencing effects	29
2.1.3 Responsible mechanisms	30
2.1.4 Discrepancies	31
2.2 Intentional movement theory – Perceptual enhancement, active control	32
2.2.1 Compensation for psychoacoustic phenomena	33
2.2.2 Enhancement of vowel contrasts	33
2.2.3 Compensation for intensity differences	35
2.3 The special case: IF0 comparing tense and lax vowels	36
2.4 Exceptions: Non-Existence of IF0	38
2.5 IF0 in the singing voice	38
2.6 Summary of the main theories	39
2.6.1 Automatic consequence of vowel production	39
2.6.2 Enhancement of vowel contrasts	40
3 Production experiment: Intrinsic F0 comparing German tense and lax vowels – EMMA, EGG and acoustic data	42
3.1 Introduction to the experiment	42
3.2 Methods	44
3.2.1 Recording and technical parameters	44
3.2.2 Pre-processing	46
3.2.3 Speech corpus and acoustical segmentation	48
3.2.4 Statistic analyses and tools	50
3.2.5 Summary of the methods	53
3.3 Results and Discussion	54
3.3.1 Landmarks onset, mid and offset of the vowel	54
3.3.2 Functional Data Analyses (FDA) of the complete curve sets	60
3.4 Conclusions	67

Part 2: Speech Perception	71
1 Introduction	71
2 Literature	74
2.1 Perception of the source pitch (non-speech signals)	74
2.1.1 Pitch perception theories	75
2.1.2 Pitch perception accuracy of complex sounds	76
2.2 Biasing factors for the pitch perception of the source signal	76
2.2.1 Musical education	77
2.2.2 Pitch memory	78
2.2.3 Temporal aspects (duration of the stimulus)	79
2.3 Influence of the spectrum on the pitch perception of the source pitch	79
2.3.1 Timbre measurement for non-speech signals	80
2.3.2 Spectral influence on source pitch: non-speech	81
2.3.3 Spectral influence on source pitch: speech	83
2.4 Neuroscience evidence for differences in pitch processing	95
2.4.1 Differences in the processing of musical and prosodic pitch	96
2.4.2 Neural landmarks for prosody identification	98
2.4.3 Musicians versus non-musicians	99
3 Perception experiment 1: Intrinsic pitch differences for vowels differing in tenseness and roundedness	100
3.1 Introduction and aims of the experiment	100
3.2 Methods	102
3.2.1 Stimulus preparation	102
3.2.2 Acoustic properties of the stimuli	102
3.2.3 Listeners	106
3.2.4 Psychophysical method	107
3.2.5 Equipment and Procedure	108
3.2.6 Dependence on other factors: Loudness adjustment	109
3.2.7 Statistics	109
3.3 Results and Discussion	112
3.3.1 F0 differences between vowels for equal pitch impression	112
3.3.2 Accuracy of the response functions with respect to F0 changes	114
3.3.3 Effect of musical education	115
3.3.4 General intrinsic pitch sensitivity: German vs. Catalan	116
3.4 Conclusion and Outlook	118
4 Perception experiment 2: Cross-linguistic intrinsic pitch perception for tenseness and vowel height differences	121
4.1 Introduction	121
4.1.1 Aims of the experiment – research hypotheses	121

4.1.1	Structure of the experiment	123
4.2	Methods	124
4.2.1	The stimuli	124
4.2.2	Further processing of the stimuli (speech and music)	131
4.2.3	The procedure	131
4.2.4	The listeners	134
4.3	Results and Discussion	137
4.3.1	Threshold differences for musical tone and vowel	137
4.3.2	Intrinsic pitch for the vowel height contrast / i a /	143
4.3.3	Intrinsic pitch for the tenseness contrast / i I /	153
4.3.4	Outlook: Systematical description of the subjects' response pattern	155
General conclusion		157
1	Linking speech production and perception	157
1.1	Tenseness differences	157
1.2	Intrinsic F0 versus intrinsic pitch in German	158
2	Cross-linguistic perception differences	160
3	Perception differences due to musical education	162
4	Music versus language mode for pitch processing	164
5	Classification of the perceptual results with regard to intrinsic pitch theories	165
6	Critical remarks/Evaluation	166
Glossary		179
Appendices		185
1	Functional data analysis: Explanation and Methods	185
2	Pitch perception theories – complete review and evaluation	190
3	Loudness measurement for perception experiment 2	194
4	Instructions for the listeners of the perception experiment 1 - German listeners	197
5	Instructions for the listeners of the perception experiment 2	198
6	Numerical results of the perception experiment 2 for all listeners and all languages	201
