

## Contents

### Preface XIII

|          |  |    |
|----------|--|----|
| <b>1</b> | <b>Brief Review of Classical Theories</b>                    | 1  |
| 1.1      | Harmonic Oscillator  | 1  |
| 1.1.1    | The Hamiltonian  | 3  |
| 1.2      | Boltzmann Transport Equation                                 | 4  |
| 1.2.1    | Equilibrium Distribution Function and Equipartition Theorem  | 5  |
| 1.2.2    | Nonequilibrium Distribution Function and Relaxation Approach | 7  |
| 1.2.3    | Mobility and Conductivity                                    | 8  |
| 1.3      | Maxwell's Equations  | 10 |
| 1.3.1    | Wave Equation  | 11 |
| 1.3.2    | Plane Waves and Wave Packets                                 | 12 |
| 1.3.3    | Interference Effects   | 16 |
| 1.4      | Summary of Classical Theories                                | 17 |
| 1.5      | Problems   | 18 |
|          | Suggested Reading  | 19 |
| <b>2</b> | <b>Milestone Discoveries and Old Quantum Theory</b>          | 21 |
| 2.1      | Blackbody Radiation and Quantum of Energy                    | 21 |
| 2.2      | Specific Heat of Solids                                      | 25 |
| 2.3      | Photoelectric Effect   | 26 |
| 2.4      | Compton Scattering   | 28 |
| 2.5      | Duality of Matter  | 31 |
| 2.6      | Bohr's H-Atom Theory   | 32 |
| 2.7      | Problems   | 37 |
|          | Suggested Reading  | 38 |
| <b>3</b> | <b>Schrödinger Equation and Operator Algebra</b>             | 39 |
| 3.1      | Schrödinger Equation   | 39 |
| 3.1.1    | Energy Eigenequation   | 41 |
| 3.2      | Momentum Eigenfunction and Fourier Series                    | 42 |

|          |  |            |
|----------|--|------------|
| 3.3      | Hermitian Operator and Bra–Ket Notations               | 44         |
| 3.4      | The Orthonogonality and Completeness of Eigenfunctions | 44         |
| 3.5      | Basic Postulates of Quantum Mechanics                  | 46         |
| 3.6      | Commutation Relation                                   | 47         |
| 3.7      | Conjugate Variables and Uncertainty Relation           | 49         |
| 3.8      | Operator Equation of Motion and Ehrenfest Theorem      | 52         |
| 3.9      | Problems   | 53         |
|          | Suggested Reading                                      | 55         |
| <b>4</b> | <b>Particle in Potential Well</b>                      | <b>57</b>  |
| 4.1      | Infinite Square Well Potential                         | 57         |
| 4.2      | Particle in 3D Box                                     | 60         |
| 4.3      | Density of States: 1D, 2D, and 3D                      | 61         |
| 4.4      | Particle in Quantum Well                               | 64         |
| 4.5      | Particle in Delta Function Potential Well              | 69         |
| 4.6      | Quantum Well and Wire                                  | 73         |
| 4.7      | Problems   | 76         |
|          | Suggested Reading                                      | 78         |
| <b>5</b> | <b>Scattering of a Particle at 1D Potentials</b>       | <b>79</b>  |
| 5.1      | Scattering at Step Potential                           | 79         |
| 5.1.1    | The Probability Current Density                        | 81         |
| 5.1.2    | Reflection and Transmission Coefficients               | 81         |
| 5.2      | Scattering at Quantum Well                             | 84         |
| 5.2.1    | Resonant Transmission                                  | 86         |
| 5.3      | Problems   | 87         |
|          | Suggested Reading                                      | 89         |
| <b>6</b> | <b>Tunneling and Its Applications</b>                  | <b>91</b>  |
| 6.1      | Tunneling Across Square Potential Barrier              | 91         |
| 6.2      | Fowler–Nordheim and Direct Tunneling                   | 94         |
| 6.3      | Resonant Tunneling                                     | 97         |
| 6.4      | The Applications of Tunneling                          | 101        |
| 6.5      | Problems   | 107        |
|          | Suggested Reading                                      | 109        |
| <b>7</b> | <b>Periodic Potential and Energy Bands</b>             | <b>111</b> |
| 7.1      | One-Dimensional Crystal and Kronig–Penny Model         | 111        |
| 7.1.1    | The Bloch Wavefunction                                 | 111        |
| 7.1.2    | Bloch Wavefunction in K–P Potential                    | 113        |
| 7.2      | $E-k$ Dispersion and Energy Bands                      | 116        |
| 7.2.1    | The Dispersion Curves and Electron Motion              | 119        |
| 7.3      | Energy Bands and Resonant Tunneling                    | 120        |
| 7.4      | Problems   | 122        |
|          | Suggested Reading                                      | 124        |

|           |   |     |
|-----------|---|-----|
| <b>8</b>  | <b>The Harmonic Oscillator</b>  | 125 |
| 8.1       | Energy Eigenequation  | 125 |
| 8.1.1     | Eigenfunction and Energy Quantization                                 | 127 |
| 8.1.2     | The Ground-State and Zero-Point Energy                                | 129 |
| 8.2       | The Properties of Eigenfunctions                                      | 129 |
| 8.2.1     | Hermite Polynomials and Recurrence Relations                          | 129 |
| 8.2.2     | The Orthogonality of Energy Eigenfunctions                            | 131 |
| 8.2.3     | Probability Densities and Correspondence Principle                    | 132 |
| 8.2.4     | The Uncertainty Relation  | 133 |
| 8.2.5     | Useful Matrix Elements  | 134 |
| 8.2.6     | Oscillator in a Linearly Superposed State                             | 135 |
| 8.3       | The Operator Treatment  | 136 |
| 8.4       | Problems  | 139 |
|           | Suggested Reading   | 141 |
| <b>9</b>  | <b>Angular Momentum</b>   | 143 |
| 9.1       | Angular Momentum Operators  | 143 |
| 9.2       | Eigenfunctions of $\hat{l}_z$ and $\hat{l}^2$ and Spherical Harmonics | 146 |
| 9.3       | Problems  | 151 |
|           | Suggested Reading   | 153 |
| <b>10</b> | <b>Hydrogen Atom: The Schrödinger Treatment</b>                       | 155 |
| 10.1      | Two-Body Central Force Problem  | 155 |
| 10.2      | The Hydrogenic Atom   | 158 |
| 10.3      | The Atomic Orbital  | 164 |
| 10.4      | Virial Theorem and Doppler Shift                                      | 169 |
| 10.5      | Problems  | 172 |
|           | Suggested Reading   | 175 |
| <b>11</b> | <b>System of Identical Particles and Many-Electron Atoms</b>          | 177 |
| 11.1      | Two-Electron System   | 177 |
| 11.2      | Two Spin 1/2 System   | 179 |
| 11.3      | Helium Atom   | 182 |
| 11.3.1    | The Ground State of He  | 184 |
| 11.3.2    | The First Excited State of He   | 187 |
| 11.4      | The Periodic Table and Structures of Atoms                            | 190 |
| 11.5      | Problems  | 192 |
|           | Suggested Reading   | 194 |
| <b>12</b> | <b>Molecules and Chemical Bonds</b>                                   | 195 |
| 12.1      | Ionized Hydrogen Molecule   | 195 |
| 12.2      | Hydrogen Molecule   | 201 |
| 12.3      | Ionic Bond and van der Waals Attraction                               | 206 |
| 12.3.1    | The Ionic Bond  | 206 |
| 12.3.2    | van der Waals Attraction  | 208 |

|           |   |     |
|-----------|---|-----|
| 12.4      | Problems  | 211 |
|           | Suggested Reading   | 213 |
| <b>13</b> | <b>The Perturbation Theory</b>                                | 215 |
| 13.1      | Time-Independent Perturbation Theory in Nondegenerate System  | 215 |
| 13.1.1    | The First-Order Perturbation                                  | 217 |
| 13.1.2    | The Second-Order Perturbation                                 | 218 |
| 13.1.3    | The Stark Effect in Harmonic Oscillator                       | 219 |
| 13.2      | Time-Dependent Perturbation Theory                            | 222 |
| 13.2.1    | The Formulation   | 222 |
| 13.2.2    | Harmonic Perturbation and Fermi's Golden Rule                 | 224 |
| 13.3      | Problems  | 227 |
|           | Suggested Reading   | 228 |
| <b>14</b> | <b>Atom–Field Interaction</b>                                 | 229 |
| 14.1      | Field Quantization  | 229 |
| 14.1.1    | One-Dimensional Resonator and Its Eigenmodes                  | 230 |
| 14.1.2    | The Blackbody Radiation Revisited                             | 235 |
| 14.2      | Atom–Field Interaction  | 237 |
| 14.2.1    | Stimulated and Spontaneous Transitions                        | 238 |
| 14.3      | Driven, Damped Two-Level Atom                                 | 242 |
| 14.4      | Problems  | 248 |
|           | Suggested Reading   | 250 |
| <b>15</b> | <b>Interaction Between EM Waves and Optical Media</b>         | 251 |
| 15.1      | Attenuation and Dispersion of Waves                           | 251 |
| 15.2      | Density Matrix and Ensemble Averaging                         | 254 |
| 15.3      | Laser Device  | 260 |
| 15.3.1    | Population Inversion  | 262 |
| 15.4      | Problems  | 266 |
|           | Suggested Reading   | 268 |
| <b>16</b> | <b>Quantum Statistics</b>                                     | 269 |
| 16.1      | General Background and Three Kinds of Particles               | 269 |
| 16.2      | Statistics for Distinguishable Particles                      | 271 |
| 16.2.1    | Boltzmann Distribution Function                               | 272 |
| 16.3      | Statistics for Fermions and Fermi–Dirac Distribution Function | 275 |
| 16.3.1    | 3D Electrons  | 277 |
| 16.3.2    | 2D Electrons  | 279 |
| 16.4      | Statistics for Bosons and Bose–Einstein Distribution Function | 280 |
| 16.5      | Problems  | 283 |
|           | Suggested Reading   | 285 |
| <b>17</b> | <b>Semiconductor Statistics</b>                               | 287 |
| 17.1      | Carrier Densities in Intrinsic Semiconductors                 | 287 |

|           |   |     |
|-----------|---|-----|
| 17.1.1    | Electron Concentration  | 289 |
| 17.1.2    | Hole Concentration  | 291 |
| 17.2      | Carrier Densities in Extrinsic Semiconductors                         | 293 |
| 17.2.1    | Donor and Acceptor Statistics   | 295 |
| 17.3      | Fermi Level in Extrinsic Semiconductors                               | 297 |
| 17.4      | Problems  | 300 |
|           | Suggested Reading   | 301 |
| <b>18</b> | <b>Charge Transport in Semiconductors</b>                             | 303 |
| 18.1      | Drift and Diffusion Currents  | 303 |
| 18.2      | Transport Coefficients  | 305 |
| 18.3      | Equilibrium and Nonequilibrium  | 310 |
| 18.3.1    | Equilibrium and Fermi Level   | 310 |
| 18.3.2    | Nonequilibrium and Quasi-Fermi Level                                  | 312 |
| 18.4      | Generation and Recombination Currents                                 | 314 |
| 18.4.1    | Band-to-Band Excitation or Recombination                              | 314 |
| 18.4.2    | Trap-Assisted Recombination and Generation                            | 315 |
| 18.5      | Problems  | 321 |
|           | Suggested Reading   | 323 |
| <b>19</b> | <b>p–n Junction Diode</b>   | 325 |
| 19.1      | The Junction Interface Physics in Equilibrium                         | 325 |
| 19.1.1    | Junction in Equilibrium Contact                                       | 326 |
| 19.2      | The Junction Interface Under Bias                                     | 330 |
| 19.3      | The Diode $I$ - $V$   | 334 |
| 19.3.1    | Ideal $I$ - $V$ Behavior  | 335 |
| 19.3.2    | Nonideal $I$ - $V$ Behavior   | 337 |
| 19.4      | Applications of p–n Junction Diodes                                   | 341 |
| 19.4.1    | Optical Absorption in Semiconductors                                  | 341 |
| 19.4.2    | Photodiodes   | 344 |
| 19.4.3    | Photovoltaic Effect and Solar Cell                                    | 346 |
| 19.4.4    | LD and LED  | 349 |
| 19.4.5    | Tunnel Diodes   | 354 |
| 19.5      | Problems  | 356 |
|           | Suggested Reading   | 357 |
| <b>20</b> | <b>The Bipolar Junction Transistor: Device Physics and Technology</b> | 359 |
| 20.1      | Bipolar Junction Transistor: Overview                                 | 359 |
| 20.1.1    | npn Transistor  | 361 |
| 20.2      | The Physics of Transistor Action                                      | 363 |
| 20.3      | Ebers–Moll Equations  | 368 |
| 20.4      | Base Transit Time and Charge Control Model                            | 370 |
| 20.5      | Problems  | 373 |
|           | Suggested Reading   | 374 |
