Contents

1 Introduction 1
- 1.1 Why Adaptivity? 2
- 1.2 Who's Who in Adaptive Atmospheric Modeling 5
- 1.3 Structure of the Text 6

2 Principles of Adaptive Atmospheric Modeling 9
- 2.1 Paradigms of Grid Refinement – Resolution Enhancement Versus Error Equilibration 9
- 2.2 Principle Difficulties with Adaptivity 10
- 2.3 Abstract Adaptive Algorithm 12
- 2.4 Dynamic Grid Adaptation – h-Refinement 14
- 2.5 Adapting the Order of Local Basis Functions – p-Refinement 17
- 2.6 Refinement Criteria 19
  - 2.6.1 Error Proxies 19
  - 2.6.2 Physics Based Criteria 20
  - 2.6.3 Mathematical Error Estimation – Basic Principles 20

3 Grid Generation 23
- 3.1 Notation 23
- 3.2 Grid Types 26
- 3.3 Refinement Strategies in 2D 27
- 3.4 Refinement in 3D 38
- 3.5 Spherical Geometries 41

4 Data Structures for Computational Efficiency 49
- 4.1 Data Structures for Grid Management 49
- 4.2 Data Structures for Efficient Numerical Calculations 54
  - 4.2.1 Vectorizable Data Structures 54
  - 4.2.2 Maintaining Data Locality – Reordering Schemes 55
- 4.3 Working With Grid Patches 59
- 4.4 Software Packages for Adaptive Grid Management 60

4.5 Example for a Grid Handling Software Package – amatos 61

5 Issues in Parallelization of Irregularly Structured Problems 71
5.1 Partitioning Strategies 72
5.1.1 Spectral Bisection Partitioning 74
5.1.2 Kernighan-Lin Partitioning 75
5.1.3 Multi-Level Methods 76
5.1.4 Space-Filling Curves 77

6 Numerical Treatment of Differential Operators on Adaptive Grids 79
6.1 Approximating the Gradient 79
6.1.1 Finite Difference Approach 80
6.1.2 Least Squares Approximation 82
6.1.3 Galerkin Approach 82
6.1.4 Radial Basis Function Approach 85
6.2 Evaluating the Gradient Approximation 87
6.2.1 Further References 90

7 Discretization of Conservation Laws 91
7.1 Conservation Laws of Interest 92
7.1.1 Conservation of Mass 92
7.1.2 Conservation of Momentum 94
7.1.3 Conservation of Energy 95
7.1.4 Equations of State – Closing the System 97
7.1.5 Deriving the Shallow Water Equations 98
7.2 Finite Volume Methods 100
7.2.1 One-Dimensional Model Problem and Basic Algorithmic Idea 100
7.2.2 Multidimensional Extension 102
7.2.3 *Convergence, Consistency and Stability* 104
7.3 Discontinuous Galerkin Methods 106
7.3.1 The Basic Idea for Ordinary Differential Equations 107
7.3.2 Application of DG Methods to Multi-Dimensional Scalar Conservation Laws 108
7.4 Conservative Semi-Lagrangian Methods 110
7.4.1 Adaptive Semi-Lagrangian Scheme 112
7.4.2 Mass-Conserving Algorithms 115

8 Example Applications 123
8.1 Tracer Advection 123
8.1.1 Filamentation of Trace Gas in the Arctic Polar Vortex 123
8.1.2 Adaptive Tracer Transport Model 125
8.1.3 Experiments and Results 126
8.2 Inverse Tracer Advection 129

8.3 Shallow Water Equations 132
8.3.1 Vorticity-Divergence Formulation 133
8.3.2 Velocity Formulation 136
8.4 Wave Dispersion 138
8.5 Test Cases 143

9 Conclusions 153
9.1 Evaluation of Methods 153
9.2 Road Map for the Next Five Years 155

Some Basic Mathematical Tools 161

Metrics for Parallelizing Irregularly Structured Problems 163

Rotating Shallow Water Equations in Spherical Geometries 167

List of Notations 173

References 175
