

Preface	<i>page</i> xiv
Acknowledgements	xvi

1 Introduction	1
2 The atmospheric dynamics of deserts	7
Some basic concepts of atmospheric structure and dynamics	8
Definition of desert	21
Climatological causes of aridity	27
Dynamic feedback mechanisms that may cause and sustain deserts	53
The dynamics of desert heat lows	58
Suggested general references for further reading	60
Questions for review	61
Problems and exercises	61
3 The climates of the world deserts	63
General meteorological characteristics of deserts	68
General physiographic characteristics of deserts	75
General vegetative characteristics of deserts	77
African deserts	79
North American deserts	104
South American deserts	115
Australian deserts	126
Asian deserts	130
European arid areas	149
Ocean deserts	150
Suggested general references for further reading	151
Questions for review	157
Problems and exercises	157

4 Atmospheric and surface energy budgets of deserts	159
Components of the atmospheric and surface energy budgets	160
Atmospheric and surface energy budgets of deserts	176
Suggested general references for further reading	186
Questions for review	186
Problems and exercises	187
5 Surface physics of the unvegetated sandy desert landscape	189
Introduction to the concepts of land-surface physics	190
Land-surface physics of unvegetated sandy desert	205
Suggested general references for further reading	217
Questions for review	218
Problems and exercises	218
6 Vegetation effects on desert surface physics	219
The effects of vegetation on the desert surface energy budget	224
The effects of vegetation on the desert surface water budget	231
The effects of vegetation on desert winds near the surface	238
Suggested general references for further reading	243
Questions for review	243
Problems and exercises	243
7 Substrate effects on desert surface physics	245
Types of desert substrate	247
Effects of desert substrate types on the surface energy budget	256
Effects of desert substrate types on the surface water budget	259
Suggested general references for further reading	263
Questions for review	264
Problems and exercises	264
8 Desert-surface physical properties	265
Albedo	266
Thermal properties	266
Aerodynamic roughness	266
Emissivity	269
Hydraulic properties	270
Suggested general references for further reading	270
Questions for review	270
Problems and exercises	270
9 Numerical modeling of desert atmospheres	271
General concept of numerical weather prediction	272
Some examples of atmospheric model applications in arid areas	273
Suggested general references for further reading	289

Questions for review	289
Problems and exercises	290
10 Desert boundary layers	291
Basic concepts of boundary-layer structure	291
Unique aspects of desert boundary layers	297
Suggested general references for further reading	301
Questions for review	301
Problems and exercises	301
11 Desert microclimates	303
Causes of intra-desert microclimates	304
Examples of intra-desert microclimate variability	308
Suggested general references for further reading	325
Questions for review	325
Problems and exercises	325
12 Dynamic interactions among desert microclimates	327
Thermally forced wind circulations in desert environments	328
Oasis effects	344
Suggested general references for further reading	346
Questions for review	346
Problems and exercises	346
13 Desert rainfall	347
Statistical characterization of desert rainfall	353
Causes of desert rainfall, and its modulation	372
Artificial rainfall enhancement in arid areas	378
Dew and fog deposition in the desert	379
Suggested general references for further reading	382
Questions for review	382
Problems and exercises	382
14 Anthropogenic effects on the desert atmosphere	383
Irrigation	385
Water-table deepening	387
Grazing and overgrazing	388
Introduction of non-native vegetation	390
Dryland agriculture	390
Urbanization	391
Off-road vehicle use	391
Deforestation	392
Suggested general references for further reading	393
Questions for review	393
Problems and exercises	393

15 Changes in desert climate	395
Time scales of climate and aridity change	396
A summary of recent climate periods	397
Methods of estimating climate change in arid regions	398
Examples of changes in desert climate during the Late Pleistocene and Holocene	401
Manifestations and causes of climate change in deserts	403
Suggested general references for further reading	416
Questions for review	417
Problems and exercises	417
16 Severe weather in the desert	419
Dust storms and sand storms	420
Rainstorms, floods, and debris flows	439
Suggested general references for further reading	443
Questions for review	443
Problems and exercises	444
17 Effects of deserts on the global environment and other regional environments	445
Global and regional transport of desert dust: background	446
Global climate effects of desert dust	451
Regional and global human-health effects of desert dust	452
Distant ecological effects of desert dust	453
Dynamic effects of deserts on meteorological processes in other regions	453
Suggested general references for further reading	454
Questions for review	455
Problems and exercises	455
18 Desertification	457
What is desertification?	459
The extent of desertification	462
Anthropogenic contributions to desertification	466
Natural contributions to desertification	476
Additional selected case studies and examples of desertification	476
Physical-process feedbacks that may affect desertification	483
Satellite-based methods for detecting and mapping desertification	486
Suggested general references for further reading	488
Questions for review	489
Problems and exercises	489
19 Biometeorology of humans in desert environments	491
The heat balance of the human body in the desert	492
The process of maintaining the heat and water balance	499

Acclimatization to the desert environment	503
Economizing water and reducing the heat load	507
Physical effects of heat stress and dehydration	511
Physical effects of desert mineral dust	515
Psychological effects of deserts	516
Measures of heat stress	517
Electrostatic effects	517
Suggested general references for further reading	517
Questions for review	518
Problems and exercises	518
20 Optical properties of desert atmospheres	519
Mirages	520
Effects of atmospheric dust	521
Scintillation	525
Suggested general references for further reading	526
Questions for review	526
Problems and exercises	526
Appendix A Glossary of meteorological and land-surface terms	527
Appendix B Abbreviations	535
Appendix C Units, numerical constants, and conversion factors	536
Appendix D Symbols	538
Appendix E Maps of the world	541
Hints to solving some problems and exercises	547
References	549
Index	587
Colour plates between pp.	157 and 158
