Part I The Global Approach	1
1 Global Problems of Atmospheric Chemistry – The Story of Man’s Impact on Atmospheric Ozone	3
1.1 Stratospheric Ozone	3
1.1.1 The Chemistry	3
1.1.2 Man’s Impact on Stratospheric Ozone	6
1.2 Tropospheric Ozone	15
1.3 Topical Problems in Atmospheric Chemistry	22
1.3.1 Observations of the Tropospheric Ozone	22
1.3.2 Long-Term Observations of Properties of the Atmosphere	22
1.3.3 Intensive Measurement Campaigns	23
1.3.4 Cloud Transport	23
1.3.5 Chemical Interactions with Hydrometeors	24
1.3.6 Photolysis Rates in Cloudy Atmospheres	24
1.3.7 Biogenic Sources of Hydrocarbons, CO, and NO	25
1.3.8 Potential Role of Halogen Radicals in Ozone Destruction	25
1.3.9 Heterogeneous Reactions on Aerosol Particles	26
1.3.10 Ozone/Climate Feedbacks in the Stratosphere	26
References	26
2 Can Laboratory Data be Related with the Real World?	31
2.1 Introduction	31
2.2 Anthropogenic Ozone: Models <i>versus</i> Reality	31
2.3 A Brief History of Atmospheric Ozone Research	33
2.4 Laboratory Studies	37
2.5 The Perturbed Stratosphere	39
2.6 Summary and Conclusions	41
References	42
3 An Example for a Man-Made Induced Feedback on the Global Oxidation Capacity: The Possible Increase of Atmospheric H₂O₂ Concentrations	43
3.1 Introduction	43
3.2 Atmospheric Chemistry of Hydrogen Peroxide (Budget Between Sources and Sinks)	43
3.3 Explanation for the H ₂ O ₂ Increase Found in Greenland Ice Cores	46
References	48

Part II Nature and Technology in Conflict?	49
4 Forest Soil Reaction to Drastic Changes in Sulphur and Alkaline Dust Deposition in Three Scots Pine Ecosystems in Northeast Germany	51
4.1 Introduction	51
4.2 Materials and Methods	52
4.2.1 Experimental Sites and Soils	52
4.2.2 Field Measurements and Soil Samples	52
4.2.3 Analytical Methods	53
4.3 Results	54
4.3.1 General Soil Physical and Chemical Properties	54
4.3.2 Inorganic Sulphate Fractions	57
4.3.3 Soil Solution Composition	57
4.3.4 Element Fluxes	60
4.4 Discussion	63
4.4.1 Element Budgets and Proton Loads of the Humus Layers	63
4.4.2 Sulphate Dynamics and Element Budgets of the Bw Horizons	67
4.5 Conclusions	74
Acknowledgements	75
References	75
5 Results of the European Auto-Oil Programme: Effects of Future European Exhaust Emissions from Road Transport on the Air Quality of European Cities	79
5.1 Introduction	79
5.2 Exhaust Emission Development	84
5.3 Effects on Air Quality	87
5.3.1 Air Quality Targets	87
5.3.2 Registration of Current Air Quality	88
5.3.3 Identification of All Emission Sources	89
5.3.4 Air Quality Forecast	89
5.3.5 Cost-Benefit Analysis	95
5.4 Summary and Conclusion	101
References	102
Part III Consequences of a Changing Atmosphere	103
6 Is the Oxidising Capacity of the Troposphere Changing?	105
6.1 Introduction	105
6.2 Oxidising Efficiency	111
6.3 Influence of the Alkane Chemistry on the Oxidising Capacity	113
6.4 Chemistry of Biogenic VOCs and its Influence on Photooxidant Formation	116
6.4.1 Isoprene	117
6.4.2 Monoterpenes	118
6.4.3 Oxygenated Compounds	119
6.5 Atmospheric Chemistry of Aromatic Hydrocarbons	119
6.6 Atmospheric Formation of HONO as a Source of OH Radicals	124

6.7	Concluding Remarks	126
	Acknowledgements	126
	References	127
7	Five-Year Record of Ozone at Mt. Brocken (Germany) – Implications for Changing Heterogeneous Chemistry	133
7.1	Introduction	133
7.2	Ozone Seasonal Cycle	134
7.3	Changing Ozone Amplitude	137
7.4	Discussion	139
	References	139
8	Acid Rain – Gone?	141
8.1	Introduction	141
8.2	What Does Acid Rain Mean?	143
	8.2.1 Acids and Bases – Some Definitions and Applications to the Atmosphere	143
	8.2.2 The Acidity Concept	148
	8.2.3 Acid Deposition: Dry and Wet Deposition <i>versus</i> Emission	160
	8.2.4 Acid-Base Relationships and Redox Processes in the Biosphere-Atmosphere Interaction (the Relationship Between Acidifying and Oxidising Capacity)	163
8.3	The Precipitation pH History in Germany and Europe Before 1990	165
8.4	The Changing Acidity after German Unification	167
	8.4.1 Seehausen Precipitation Chemistry	167
	8.4.2 Brocken Cloud Chemistry	169
8.5	Discussion and Conclusions	172
