<b>Preface</b>	<b>1</b>
<b>1 Priors from DSGE Models for Dynamic Factor Analysis</b>	<b>5</b>
1.1 Introduction . . . . .	5
1.2 Relation to the Literature . . . . .	8
1.3 Empirical Model, Estimation and Identification . . . . .	11
1.3.1 Estimation Method . . . . .	12
1.3.2 Identification of Factors: The Observation Equation . . . . .	13
1.3.3 DSGE Model Prior: The State Equation . . . . .	16
1.4 Empirical Analysis of US Data . . . . .	19
1.4.1 Data . . . . .	19
1.4.2 Implementation . . . . .	21
1.4.3 Forecast Performance . . . . .	22
1.4.4 In-Sample Fit . . . . .	23
1.4.5 Parameter estimates . . . . .	25
1.4.6 Transmission of Shocks . . . . .	27
1.5 Conclusion . . . . .	32
1.A Tables and Figures . . . . .	34
<b>2 Monetary Policy in Small Open Economies: A DSGE-VAR Approach for Switzerland</b>	<b>49</b>
2.1 Introduction . . . . .	49
2.2 The DSGE model . . . . .	53
2.2.1 Domestic Household . . . . .	54

2.2.2	Domestic Firms . . . . .	56
2.2.3	Domestic Retailers . . . . .	58
2.2.4	Monetary Authority . . . . .	59
2.2.5	Market Clearing . . . . .	59
2.2.6	The Foreign Economy . . . . .	60
2.2.7	Equilibrium . . . . .	60
2.2.8	Log-Linear Approximation to the Model . . . . .	61
2.3	Estimation Method: The DSGE-VAR Approach . . . . .	64
2.3.1	General Idea . . . . .	65
2.3.2	Formal Description . . . . .	69
2.4	Empirical Implementation . . . . .	79
2.4.1	Data . . . . .	79
2.4.2	Prior Distribution and Model Specification . . . . .	79
2.4.3	MCMC Algorithm . . . . .	80
2.5	Results . . . . .	81
2.5.1	Model Selection . . . . .	81
2.5.2	Model Properties . . . . .	82
2.5.3	The Taylor Rule . . . . .	84
2.5.4	Policy Experiments . . . . .	84
2.6	Conclusion . . . . .	85
2.A	Tables and Figures . . . . .	87
2.B	Derivations of the Model Equations . . . . .	95
2.B.1	The Domestic Household . . . . .	95
2.B.2	Pricing Decision of the Domestic Firm . . . . .	96
2.B.3	Log-Linearizing the Equilibrium Conditions . . . . .	98
<b>3</b>	<b>Model-Consistent Expectations for Business Cycle Accounting</b>	<b>105</b>
3.1	Introduction . . . . .	105
3.2	Consistent Modeling of the Wedges . . . . .	106
3.3	Conclusion . . . . .	112
<b>4</b>	<b>Business Cycle Accounting and the Great Moderation</b>	<b>113</b>
4.1	Introduction . . . . .	113

4.2	Explaining the Great Moderation: A Survey . . . . .	116
4.2.1	Descriptive Evidence . . . . .	116
4.2.2	Evidence based on Behavioural Models . . . . .	119
4.3	The Business Cycle Accounting Procedure . . . . .	121
4.3.1	Mapping Detailed Economies into a Benchmark Model: The Equivalence Result . . . . .	122
4.3.2	Implementation of Accounting . . . . .	124
4.4	Step 1: Specifying the Benchmark RBC Model . . . . .	125
4.5	Step 2: Estimating the Benchmark Model . . . . .	127
4.5.1	Data and descriptive statistics . . . . .	128
4.5.2	Econometric Model . . . . .	129
4.5.3	Estimation method . . . . .	130
4.5.4	Implementation . . . . .	131
4.6	Step 3: Evaluating the Estimated Model . . . . .	134
4.6.1	Common and Idiosyncratic Components . . . . .	134
4.6.2	General Accounting Results . . . . .	136
4.6.3	Accounting for the Great Moderation . . . . .	137
4.7	Step 4: Relating Detailed Economies to the Empirical Results . . . . .	140
4.8	Conclusion . . . . .	147
4.A	Tables . . . . .	149
4.B	Figures . . . . .	154
4.C	Mapping the Limited Participation Model . . . . .	163
