Preface *XI*

List of Contributors *XV*

1	General Theory of High-T_c Superconductors	1
	<i>Kaname Matsumoto</i>	
1.1	Fundamental Properties of Superconductors	1
1.1.1	The Superconducting Phenomenon	1
1.1.2	Superconductivity and Quantum Mechanics	3
1.1.2.1	Wave-Particle Duality	4
1.1.2.2	Fermion and Boson	5
1.1.2.3	Zero Resistance	6
1.1.2.4	Origin of Formation of a Cooper Pair	7
1.1.2.5	Josephson Effect	8
1.1.3	Superconductivity and Thermodynamics	9
1.1.3.1	Superconductor in Magnetic Field	9
1.1.3.2	London Equations	10
1.1.3.3	Ginzburg-Landau Theory	12
1.1.3.4	Type I and Type II Superconductors	13
1.1.3.5	Mixed State	14
1.2	Superconducting Materials	17
1.2.1	Superconducting Metals and Alloys	17
1.2.1.1	Elements	17
1.2.1.2	Alloys	18
1.2.2	Superconducting Compounds	19
1.2.2.1	A15 Type Compound	19
1.2.2.2	Nitride and Chevrel Compound	21
1.2.2.3	MgB ₂	22
1.2.3	Organic Superconductors	23
1.3	High- T_c Oxide Superconductors	25
1.3.1	Early Oxide Superconductors	25
1.3.2	Cuprate Superconductors	26
1.3.2.1	Crystal Structure	26
1.3.2.2	Electronic Structure	28

1.3.2.3	Anisotropy and Vortex Lattice Melting	30
1.3.2.4	Vortex Glass and Bose Glass	32
1.3.3	Other High-Tc Oxide Superconductors	33
1.4	Critical Currents and Vortex Pinning	34
1.4.1	Critical Currents and Current–Voltage Characteristics	34
1.4.1.1	Current–Voltage Characteristic	34
1.4.1.2	Depairing Current Density	35
1.4.2	Vortex Pinning	36
1.4.2.1	Elementary Pinning Force	36
1.4.2.2	Elasticity of Vortex Lattice	37
1.4.2.3	Global Pinning Force	38
1.4.2.4	Scaling Rule	39
1.4.3	Critical State and Thermal Fluctuation	40
1.4.3.1	Critical State Model	40
1.4.3.2	Vortex Creep and TAFF	41
1.4.3.3	Thermal Fluctuation	43
1.4.4	Grain Boundary Problem	44
	References	46

2 Characterizing Current Conduction in Coated Conductors Using Transport and Contact-Free Magnetic Methods 49

Özgür Polat, James R. Thompson, David K. Christen, Dhananjay Kumar, Patrick M. Martin, Sylvester W. Cook, Frederick A. List, John W. Sinclair, Venkat Selvamanickam, and Yimin M. Chen

2.1	Introduction	49
2.2	Experimental Details	52
2.2.1	Four-Probe Method (Figure 2.2a)	53
2.2.2	Swept Field Method (Figure 2.2b)	53
2.2.3	Flux Creep Methods (Figure 2.2c)	54
2.3	Results	54
2.3.1	Field Dependence of Current Density	54
2.3.2	E - J Characteristics	55
2.3.3	Magnetic Relaxation	58
2.3.3.1	Results of Creep Experiments	59
2.3.3.2	‘Maley Analysis’	60
2.3.4	The Power Law Index n	62
2.4	Conclusions	63
	References	64

3 Characterization: Raman Spectroscopy Measurements and Interpretations 67

Victor A. Maroni

3.1	Introduction	67
3.2	Raman Measurement Methods	68
3.3	Raman Spectroscopy of Ceramic Superconductors	70

3.3.1	REBCO Superconductors	70
3.3.1.1	REBCO Oxygen Stoichiometry and Texture	71
3.3.1.2	Disorder in the REBCO Lattice	73
3.3.1.3	Detection of Nonsuperconducting Second Phases (NSPs)	74
3.3.1.4	Penetration Depth and Through-Thickness Examination	75
3.3.1.5	Monitoring of the REBCO Formation Process	76
3.3.2	Bismuth Oxide Superconductors	80
3.3.3	Mercury Oxide Superconductors	82
3.3.4	Thallium Oxide Superconductors	86
3.3.5	The MgB_2 Superconductor	87
3.3.6	Other Families of Superconductors	89
	Acknowledgment	89
	References	90
4	$YBa_2Cu_3O_{7-x}$ Coated Conductors	93
	<i>Mariappan Parans Paranthaman</i>	
4.1	Introduction	93
4.2	Ion Beam Assisted Deposition (IBAD) Process	95
4.3	Inclined Substrate Deposition (ISD) Process	97
4.4	Rolling-Assisted Biaxially Textured Substrate (RABiTS) Based Templates	97
4.5	REBCO-Based 2G Wires	99
4.6	Summary	99
	Acknowledgments	101
	References	101
5	Flux Pinning Enhancement in $YBa_2Cu_3O_{7-x}$ Films for Coated Conductor Applications	105
	<i>C.V. Varanasi and P.N. Barnes</i>	
5.1	Introduction	105
5.1.1	Types of Pinning Centers	106
5.1.1.1	Crystalline Defects	107
5.1.1.2	Microstructural Defects	107
5.1.1.3	Rare Earth Doping	107
5.1.1.4	Second-Phase Additions	107
5.2	Pulsed-Laser Deposition (PLD)	108
5.2.1	Alternate Targets	108
5.2.2	Premixed Targets	108
5.2.3	Sectored Target	109
5.3	Experimental Setup	109
5.4	Results and Discussion	110
5.4.1	YBCO Films Prepared Using a YBCO Sectored PLD Target with Y_2BaCuO_5 and $BaSnO_3$ Sectors	110
5.4.2	Current Density and Alpha Value Variations with Temperature, and Dual Peaks in F_n Plots of YBCO+BSO Samples	111

- 5.4.3 High-Quality YBCO+BSO Thick Films 114
- 5.4.4 YBCO+BSO Effects of Concentrations 119
- 5.4.5 YBCO+BSO Films on Coated-Conductor Technical Substrates (Buffered Metallic Substrates) 122
- 5.5 Summary 124
 - Acknowledgments 125
 - References 125

- 6 Thallium-Oxide Superconductors 129**
Raghu N. Bhattacharya
 - 6.1 Spray-Deposited, Tl-Oxide Films 130
 - 6.2 Electrodeposited Tl-Oxide Superconductors 140
 - References 150

- 7 Recent Progress in Fabrication, Characterization, and Application of Hg-Based Oxide Superconductors 153**
Judy Wu and Hua Zhao
 - 7.1 The Fascinating Hg-Based High- T_c Superconductors 153
 - 7.1.1 Probing the Mechanism of Superconductivity in Hg-HTS Materials 154
 - 7.1.2 Pressure Effect 157
 - 7.1.3 Anisotropy of Resistivity in Vicinal Hg-HTS Films 158
 - 7.1.4 Magnetic Pinning 158
 - 7.2 Synthesis of Hg-HTS Bulks and Films 160
 - 7.2.1 Superconductivity in Hg-HTS bulks with $n > 3$ CuO_2 Layers 160
 - 7.2.2 Doping Hg-HTSs 161
 - 7.2.3 Growth of Hg-HTS Films on Technologically Important Substrates 162
 - 7.2.4 Thick Hg-HTS Films 163
 - 7.2.5 Cation Exchange Process 163
 - 7.3 Applications of Hg-Based HTS Materials 166
 - 7.3.1 Microwave Passive Devices 166
 - 7.3.2 Photodetectors 168
 - 7.3.3 Electrical Power-Related Devices 168
 - 7.3.4 Josephson Junctions 168
 - 7.4 Future Remarks 169
 - References 170

- 8 Superconductivity in MgB_2 175**
Rudeger H.T. Wilke, Sergey L. Bud'ko, Paul C. Canfield, and Douglas K. Finnemore
 - 8.1 Introduction 175
 - 8.2 Basic Properties of MgB_2 177
 - 8.2.1 Synthesis of Bulk MgB_2 177
 - 8.2.2 Crystal Structure and Bonding 178

8.2.3	Pairing Mechanism	178
8.2.4	Thermodynamic Properties and Two-Gap Nature	180
8.3	Tuning the Upper Critical Field	185
8.4	$\text{Mg}_{1-x}\text{Al}_x\text{B}_2$	187
8.4.1	Structural Properties	189
8.4.2	T_c versus x	190
8.4.3	Evolution of H_{c2} in $\text{Mg}_{1-x}\text{Al}_x\text{B}_2$	190
8.4.4	Superconducting Gaps in $\text{Mg}_{1-x}\text{Al}_x\text{B}_2$	192
8.5	$\text{Mg}(\text{B}_{1-x}\text{C}_x)_2$	193
8.5.1	Normal State Properties	194
8.5.2	Thermodynamic and Transport Properties	195
8.5.3	Evolution of the Superconducting Gaps	198
8.5.4	Nature of Scattering in $\text{Mg}(\text{B}_{1-x}\text{C}_x)_2$	199
8.6	Neutron Irradiation of MgB_2	201
8.7	Comparison between Neutron-Damaged and Carbon-Doped Samples	205
8.8	Critical Current Densities in MgB_2 Wires	208
8.8.1	Enhancing Critical Current Densities	208
8.8.2	MgB_2 Wires from CVD	211
8.8.3	Powder-in-Tube	212
8.9	Future Directions in MgB_2 Research	214
	Acknowledgments	215
	References	215
	Index	223
