

Contents

1	Basic Principles of the Kinetic Theory	1
1.1	Introduction	1
1.2	Molecular Structure of a Gas	7
1.2.1	Basic Principles	7
1.2.2	The Maxwellian Distribution Function	8
1.2.3	Determination of the Characteristic Velocities	12
1.2.4	Molecular Flux	14
1.2.5	Elementary Theory of Transport Processes	16
1.2.6	Characteristic Dimensions	20
1.2.7	Potentials of Molecular Interactions	21
1.3	Brownian Motion	23
1.4	Dynamics of a Binary Collision	26
1.4.1	Conservation Laws	26
1.4.2	Asymptotic Post-Collisional Velocities	28
1.4.3	Asymptotic Velocities for Gas Mixtures	29
1.4.4	Scattering Angle χ	30
1.4.5	Differential Cross Section	32
1.5	Appendix	35
2	The Boltzmann Equation	37
2.1	The Boltzmann Equation	37
2.2	The BBGKY Hierarchy	42
2.2.1	The Liouville Theorem	42
2.2.2	Equations of the BBGKY Hierarchy	44
2.2.3	The Boltzmann Equation	47
2.3	The Transfer Equation	51
2.4	Summational Invariants	53

2.5	Macroscopic Description	56
2.5.1	Moments of the Distribution Function	56
2.5.2	Balance Equations for the Moments	58
2.6	The Definition of Equilibrium	59
2.6.1	The Maxwellian Distribution Function	59
2.6.2	Equilibrium States	60
2.7	Entropy and Entropy Flux	66
2.8	The \mathcal{H} -Theorem	69
2.8.1	Interactions of Gas Molecules with Solid Surfaces	69
2.8.2	Scattering Kernels	71
2.8.3	The \mathcal{H} -Theorem	76
2.8.4	The Paradoxes of Loschmidt and Zermelo	77
2.9	The Many Faces of Entropy	78
2.10	Appendix	79
3	The Chapman–Enskog Method	81
3.1	Thermodynamics of a Single Fluid	81
3.2	Simplified Version of the Chapman–Enskog Method	83
3.2.1	The Integral Equation	83
3.2.2	Solution of the Integral Equation	86
3.2.3	Constitutive Equations and Transport Coefficients	89
3.3	Formal Version of the Chapman–Enskog Method	93
3.3.1	The dimensionless Boltzmann Equation	93
3.3.2	The Integral Equations	94
3.3.3	The Second Approximation	96
3.3.4	Expansion of the Scalar Coefficients \mathcal{A} and \mathcal{B}	98
3.3.5	Transport Coefficients	101
3.4	The BGK Model	104
3.5	Appendix	107
4	Moment Methods	109
4.1	Grad’s Moment Method	109
4.1.1	Balance Equations	109
4.1.2	Grad’s Distribution Function	110
4.1.3	Grad’s Distribution from Entropy Maximization	113
4.1.4	Determination of the Non-convective Fluxes, Production Terms, Entropy Density and Entropy Flux	114
4.1.5	Field Equations	117
4.2	The Method of Maxwell and Ikenberry–Truesdell	119
4.2.1	Calculation of the Production Terms	119
4.2.2	The Maxwellian Iteration	120
4.3	The Chapman–Enskog–Grad Combined Method	122
4.4	Non-inertial Reference Frames	125
4.4.1	Objective Tensors	125

4.4.2	The Boltzmann Equation in Non-inertial Reference Frames.....	128
4.4.3	Frame Dependence of the Heat Flux Vector.....	130
4.5	Appendix	132
5	Polyatomic Gases.....	133
5.1	Some Properties of Polyatomic Gases	133
5.2	Semi-classical Model	135
5.2.1	Boltzmann and Transfer Equations	135
5.2.2	Macroscopic Description.....	138
5.2.3	The Equilibrium Distribution Function.....	140
5.2.4	Equilibrium States	142
5.2.5	The Non-equilibrium Distribution Function	143
5.2.6	The Laws of Navier–Stokes and Fourier	145
5.2.7	A Limiting Case	149
5.3	Classical Model	151
5.3.1	Basic Fields	151
5.3.2	Boltzmann and Transfer Equations	152
5.3.3	Transport Coefficients.....	155
5.4	Rough Spherical Molecules	156
5.4.1	Dynamics of a Binary Collision.....	157
5.4.2	Transport Coefficients.....	159
5.5	Appendix	163
6	Dense Gases	165
6.1	The Thermal Equation of State	165
6.1.1	The Van der Waals Equation	165
6.1.2	The Virial Equation of State.....	169
6.2	Enskog’s Dense Gas	171
6.2.1	The Enskog’s Equation.....	171
6.2.2	The Transfer Equation	172
6.2.3	Macroscopic Description.....	173
6.2.4	Determination of the Potential Contributions	174
6.2.5	Equilibrium Constitutive Equations.....	176
6.2.6	Determination of the Kinetic Contributions	177
6.2.7	The Laws of Navier–Stokes and Fourier	179
6.3	The Modified Enskog Equation.....	180
7	Granular Gases.....	185
7.1	Dynamics of a Binary Collision.....	185
7.2	The Boltzmann Equation.....	186
7.3	Macroscopic Description of a Granular Gas	187
7.4	The Chapman–Enskog Method.....	188
7.4.1	Integral Equations.....	188
7.4.2	First Approximation $f^{(0)}$	190

7.4.3	Second Approximation $f^{(1)}$	193
7.4.4	Constitutive Equations for the Pressure Tensor and the Heat Flux Vector	197
7.5	Granular Gases of Rough Spherical Molecules	199
8	Mixtures of Monatomic Gases	203
8.1	Boltzmann and Transfer Equations	203
8.2	Macroscopic Description	204
8.3	Thermodynamics of Fluid Mixtures	208
8.4	The Equilibrium Distribution Function	210
8.5	Equilibrium States	213
8.6	Grad's Distribution Function	215
8.7	The Combined Chapman–Enskog–Grad Method	217
8.8	The Navier–Stokes Law	218
8.9	The Laws of Fick and Fourier	219
8.10	Matrices as Functions of the Collision Integrals	223
8.11	Binary Mixtures	226
8.11.1	Coefficients of Shear Viscosity and Thermal Conductivity	226
8.11.2	Coefficients of Diffusion and Thermal–Diffusion Ratio	228
8.11.3	Coefficients for Some Intermolecular Potentials	229
8.12	Appendix	231
9	Chemically Reacting Gas Mixtures	235
9.1	Thermodynamics of Chemically Reacting Systems	235
9.1.1	Extent of Reaction and Affinity	235
9.1.2	Chemical Potentials	237
9.1.3	The Law of Mass Action	238
9.1.4	The Arrhenius Equation	240
9.2	Boltzmann Equations	242
9.3	Transfer and Balance Equations	244
9.4	Models for Differential Cross Sections	249
9.5	Equilibrium Distribution Function	250
9.6	Transport Coefficients for $H_2 + Cl \rightleftharpoons HCl + H$	252
9.6.1	Chapman–Enskog Method	252
9.6.2	Transport Coefficients	257
9.6.3	Quaternary Mixture H_2, Cl, HCl, H	260
9.6.4	Remarks on the Reactive Contributions to the Transport Coefficients	267
9.7	Trend to Equilibrium of $H_2 + Cl \rightleftharpoons HCl + H$	268
9.7.1	Determination of the Production Terms	268
9.7.2	Constituents at Same Temperature	270
9.8	The \mathcal{H} -Theorem and the Tendency to Equilibrium	275
9.9	Symmetric Reactions	280

9.9.1	The Influence of the Heat of Reaction on Slow Reactions	281
9.9.2	Chemical Reactions without Activation Energy.....	287
9.9.3	Remarks on the Geometry of the Collisions	291
9.9.4	Remarks on Inelastic Reactive Collisions	293
