Preface	xi
1 Formalisms, Electron Counting, and Bonding (How Things Work)	1
1.1 Introduction	1
1.2 Formalisms	2
a. Oxidation State	2
b. d -Electron Configuration, Coordination Saturation, and the 18-Electron Rule	3
c. Classes of Ligands	4
1.3 Bonding Considerations	8
1.4 Structural Considerations	10
2 Organometallic Reaction Mechanisms	12
2.1 Introduction	12
2.2 Ligand Substitution Processes	12
2.3 Oxidative Addition–Reductive Elimination	17
2.4 Migratory Insertion and β -Hydride Elimination	23
2.5 Nucleophilic Attack on Ligands Coordinated to Transition Metals	24
2.6 Transmetallation	32
2.7 Electrophilic Attack on Transition Metal Coordinated Ligands	33
3 Synthetic Applications of Transition Metal Hydrides	36
3.1 Introduction	36
3.2 Homogeneous Hydrogenation	37
3.3 Transfer Hydrogenations	53

3.4	Hydrofunctionalizations	58
3.5	Metal Hydride-Catalyzed Alkene Isomerizations	62
3.6	Other Reactions of Transition Metal Hydrides	64
4	Synthetic Applications of Complexes Containing Metal–Carbon σ-Bonds	68
4.1	Introduction	68
4.2	σ -Carbon–Metal Complexes from the Reaction of Carbanions and Metal Halides: Organocopper Chemistry	68
4.3	σ -Carbon–Metal Complexes from Insertion of Alkenes and Alkynes into Metal–Hydrogen Bonds	81
4.4	σ -Carbon–Metal Complexes from Transmetallation–Insertion Processes	87
4.5	σ -Carbon–Metal Complexes from Oxidative Addition–Transmetallation Sequences	91
4.6	σ -Carbon–Metal Complexes from Oxidative Addition–Nucleophilic Substitution Sequences	115
4.7	σ -Carbon–Metal Complexes from Oxidative Addition–Insertion Processes (the Heck Reaction)	119
4.8	σ -Carbon–Metal Complexes from Carbon–Hydrogen Bond Insertion Processes	132
4.9	σ -Carbon–Metal Complexes from the Reductive Coupling of Alkenes and Alkynes	138
5	Synthetic Applications of Transition Metal Carbonyl Complexes	161
5.1	Introduction	161
5.2	Coupling Reactions of Iron Carbonyls	162
5.3	Carbonylation Reactions	164
5.4	Decarbonylation, Hydroformylation, and Hydroacylation Reactions	172
5.5	Metal Acyl Enolates	177
5.6	Bridging Acyl Complexes	180
6	Synthetic Applications of Transition Metal Carbene Complexes	183
6.1	Introduction	183
6.2	Electrophilic Heteroatom Stabilized “Fischer” Carbene Complexes	183
6.3	Electrophilic, Nonstabilized Carbene Complexes	212

6.4	Metal-Catalyzed Decomposition of Diazo Compounds Proceeding Through Unstabilized Electrophilic Carbene Intermediates	215
6.5	Metathesis Processes of Electrophilic Carbene Complexes	222
6.6	Nucleophilic "Schrock" Carbene Complexes	232
7	Synthetic Applications of Transition Metal Alkene, Diene, and Dienyl Complexes	245
7.1	Introduction	245
7.2	Metal-Alkene Complexes	246
	a. Palladium(II) Complexes	246
	b. Iron(II) Complexes	266
7.3	Metal-Diene Complexes	268
	a. Fe(CO) ₃ as a 1,3-Diene Protecting Group	268
	b. Nucleophilic Attack on Metal-Diene Complexes	275
	c. Nucleophilic Attack on Cationic Metal-Dienyl Complexes	279
	d. Metal-Catalyzed Cycloaddition Reactions	283
8	Synthetic Applications of Transition Metal Alkyne Complexes	299
8.1	Introduction	299
8.2	Nucleophilic Attack on Metal-Alkyne Complexes	299
8.3	Stable Alkyne Complexes	321
	a. As Alkyne Protecting Groups	321
	b. The Pauson-Khand Reaction	326
8.4	Metal-Catalyzed Cyclooligomerization of Alkynes	332
8.5	Zirconium- and Titanium-Complex-Mediated Reactions	342
9	Synthetic Applications of η^3-Allyl Transition Metal Complexes	351
9.1	Introduction	351
9.2	Transition-Metal-Catalyzed Telomerization of 1,3-Dienes	352
9.3	Palladium-Catalyzed Reactions of Allylic Substrates	356
	a. General	356
	b. Allylic Alkylation	358
	c. Allylic Alkylation by Transmetalation	363
	d. Allylic Amination, Alkoxylation, Reduction, and Deprotonation	365
	e. Insertion Processes Involving η^3 -Allylpalladium Complexes	375
	f. Palladium(0)-Catalyzed Cycloaddition Reactions via Trimethylenemethane Intermediates	378

g. Reaction of Propargylic Substrates	383
9.4 η^3 -Allyl Complexes of Metals Other than Palladium	384
a. Molybdenum, Tungsten, Ruthenium, Rhodium, and Iridium Catalysis	384
b. η^3 -Allylmolybdenum and Tungsten Complexes	386
c. η^3 -Allyliron Complexes	388
d. η^3 -Allylcobalt Complexes	389
e. η^3 -Allylnickel Complexes	390
10 Synthetic Applications of Transition Metal Arene Complexes	400
10.1 Introduction	400
10.2 Preparation of η^6 -Arene Complexes	401
10.3 Reactions of η^6 -Arene–Metal Complexes	403
a. Nucleophilic Aromatic Substitution of Complexed Aryl Halides	403
b. Addition of Carbon Nucleophiles to Metal–Arene Complexes	405
c. Lithiation of Arenechromium Tricarbonyl Complexes	414
d. Side-Chain Activation and Control of Stereochemistry	416
10.4 η^2 -Arene–Metal Complexes	423
Index	433
