Foreword to the first English edition	xiii
Preface to the first English edition	xv
Preface to second edition	xvii
Acknowledgments	xix
Introduction	xxi
<b>PART 1 SEPARATION METHODS</b>	<b>1</b>
<b>1 General aspects of chromatography</b>	<b>3</b>
1.1 General concepts of analytical chromatography	3
1.2 The chromatogram	6
1.3 Gaussian-shaped elution peaks	7
1.4 The plate theory	9
1.5 Nernst partition coefficient ( $K$ )	11
1.6 Column efficiency	12
1.7 Retention parameters	14
1.8 Separation (or selectivity) factor between two solutes	17
1.9 Resolution factor between two peaks	17
1.10 The rate theory of chromatography	19
1.11 Optimization of a chromatographic analysis	22
1.12 Classification of chromatographic techniques	24
Problems	27
<b>2 Gas chromatography</b>	<b>31</b>
2.1 Components of a GC installation	31
2.2 Carrier gas and flow regulation	33
2.3 Sample introduction and the injection chamber	34
2.4 Thermostatically controlled oven	39
2.5 Columns	39
2.6 Stationary phases	41
2.7 Principal gas chromatographic detectors	46
2.8 Detectors providing structural data	50
2.9 Fast chromatography	52
2.10 Multi-dimensional chromatography	53
2.11 Retention indexes and stationary phase constants	54
Problems	58

<b>3</b>	<b>High-performance liquid chromatography</b>	<b>63</b>
3.1	<i>The beginnings of HPLC</i>	63
3.2	General concept of an HPLC system	64
3.3	Pumps and gradient elution	65
3.4	Injectors	68
3.5	Columns	68
3.6	Stationary phases	70
3.7	Chiral chromatography	75
3.8	Mobile phases	76
3.9	Paired-ion chromatography	78
3.10	Hydrophobic interaction chromatography	80
3.11	Principal detectors	80
3.12	Evolution and applications of HPLC	87
	Problems	89
<b>4</b>	<b>Ion chromatography</b>	<b>93</b>
4.1	Basics of ion chromatography	93
4.2	Stationary phases	96
4.3	Mobile phases	98
4.4	Conductivity detectors	100
4.5	Ion suppressors	101
4.6	Principle and basic relationship	104
4.7	Areas of the peaks and data treatment software	105
4.8	External standard method	105
4.9	Internal standard method	107
4.10	Internal normalization method	110
	Problems	112
<b>5</b>	<b>Thin layer chromatography</b>	<b>117</b>
5.1	Principle of TLC	117
5.2	Characteristics of TLC	120
5.3	Stationary phases	121
5.4	Separation and retention parameters	122
5.5	Quantitative TLC	123
	Problems	125
<b>6</b>	<b>Supercritical fluid chromatography</b>	<b>127</b>
6.1	Supercritical fluids: a reminder	127
6.2	Supercritical fluids as mobile phases	129
6.3	Instrumentation in SFC	130
6.4	Comparison of SFC with HPLC and GC	131
6.5	SFC in chromatographic techniques	133
<b>7</b>	<b>Size exclusion chromatography</b>	<b>135</b>
7.1	Principle of SEC	135
7.2	Stationary and mobile phases	137
7.3	Calibration curves	138
7.4	Instrumentation	139
7.5	Applications of SEC	140
	Problems	143

<b>8</b>	<b>Capillary electrophoresis and electrochromatography</b>	<b>145</b>
8.1	From zone electrophoresis to capillary electrophoresis	145
8.2	Electrophoretic mobility and electro-osmotic flow	148
8.3	Instrumentation	152
8.4	Electrophoretic techniques	155
8.5	Performance of CE	157
8.6	Capillary electrochromatography	159
	Problems	161
 <b>PART 2 SPECTROSCOPIC METHODS</b>		 <b>165</b>
<b>9</b>	<b>Ultraviolet and visible absorption spectroscopy</b>	<b>167</b>
9.1	The UV/Vis spectral region and the origin of the absorptions	167
9.2	The UV/Vis spectrum	169
9.3	Electronic transitions of organic compounds	171
9.4	Chromophore groups	173
9.5	Solvent effects: solvatochromism	174
9.6	Fieser-Woodward rules	176
9.7	Instrumentation in the UV/Visible	178
9.8	UV/Vis spectrophotometers	181
9.9	Quantitative analysis: laws of molecular absorption	186
9.10	Methods in quantitative analysis	190
9.11	Analysis of a single analyte and purity control	192
9.12	Multicomponent analysis (MCA)	193
9.13	Methods of baseline correction	196
9.14	Relative error distribution due to instruments	198
9.15	Derivative spectrometry	200
9.16	Visual colorimetry by transmission or reflection	202
	Problems	203
<b>10</b>	<b>Infrared spectroscopy</b>	<b>207</b>
10.1	The origin of light absorption in the infrared	207
10.2	Absorptions in the infrared	208
10.3	Rotational-vibrational bands in the mid-IR	208
10.4	Simplified model for vibrational interactions	210
10.5	Real compounds	212
10.6	Characteristic bands for organic compounds	212
10.7	Infrared spectrometers and analysers	216
10.8	Sources and detectors used in the mid-IR	221
10.9	Sample analysis techniques	225
10.10	Chemical imaging spectroscopy in the infrared	230
10.11	Archiving spectra	232
10.12	Comparison of spectra	233
10.13	Quantitative analysis	234
	Problems	238

<b>11</b>	<b>Fluorimetry and chemiluminescence</b>	<b>241</b>
11.1	Fluorescence and phosphorescence	241
11.2	The origin of fluorescence	243
11.3	Relationship between fluorescence and concentration	245
11.4	Rayleigh scattering and Raman bands	247
11.5	Instrumentation	249
11.6	Applications	253
11.7	Time-resolved fluorimetry	255
11.8	Chemiluminescence	256
	Problems	259
<b>12</b>	<b>X-ray fluorescence spectrometry</b>	<b>263</b>
12.1	Basic principles	263
12.2	The X-ray fluorescence spectrum	264
12.3	Excitation modes of elements in X-ray fluorescence	266
12.4	Detection of X-rays	271
12.5	Different types of instruments	273
12.6	Sample preparation	277
12.7	X-ray absorption – X-ray densimetry	278
12.8	Quantitative analysis by X-ray fluorescence	279
12.9	Applications of X-ray fluorescence	279
	Problems	281
<b>13</b>	<b>Atomic absorption and flame emission spectroscopy</b>	<b>285</b>
13.1	The effect of temperature upon an element	285
13.2	Applications to modern instruments	288
13.3	Atomic absorption versus flame emission	288
13.4	Measurements by AAS or by FES	290
13.5	Basic instrumentation for AAS	291
13.6	Flame photometers	297
13.7	Correction of interfering absorptions	298
13.8	Physical and chemical interferences	302
13.9	Sensitivity and detection limits in AAS	304
	Problems	305
<b>14</b>	<b>Atomic emission spectroscopy</b>	<b>309</b>
14.1	Optical emission spectroscopy (OES)	309
14.2	Principle of atomic emission analysis	310
14.3	Dissociation of the sample into atoms or ions	311
14.4	Dispersive systems and spectral lines	315
14.5	Simultaneous and sequential instruments	317
14.6	Performances	321
14.7	Applications of OES	323
	Problems	324
<b>15</b>	<b>Nuclear magnetic resonance spectroscopy</b>	<b>327</b>
15.1	General introduction	327
15.2	Spin/magnetic field interaction for a nucleus	328
15.3	Nuclei that can be studied by NMR	331

15.4	Bloch theory for a nucleus of spin number $I = 1/2$	331
15.5	Larmor frequency	333
15.6	Pulsed NMR	335
15.7	The processes of nuclear relaxation	339
15.8	Chemical shift	340
15.9	Measuring the chemical shift	341
15.10	Shielding and deshielding of the nuclei	342
15.11	Factors influencing chemical shifts	342
15.12	Hyperfine structure – spin–spin coupling	344
15.13	Heteronuclear coupling	345
15.14	Homonuclear coupling	347
15.15	Spin decoupling and particular pulse sequences	352
15.16	HPLC-NMR coupling	354
15.17	Fluorine and phosphorus NMR	355
15.18	Quantitative NMR	356
15.19	Analysers using pulsed NMR	360
	Problems	364
<b>PART 3 OTHER METHODS</b>		<b>367</b>
<b>16</b>	<b>Mass spectrometry</b>	<b>369</b>
16.1	Basic principles	369
16.2	The magnetic-sector design	372
16.3	'EB' or 'BE' geometry mass analysers	374
16.4	Time of flight analysers (TOF)	379
16.5	Quadrupole analysers	381
16.6	Quadrupole ion trap analysers	385
16.7	Ion cyclotron resonance analysers (ICRMS)	387
16.8	Mass spectrometer performances	389
16.9	Sample introduction	391
16.10	Major vacuum ionization techniques	392
16.11	Atmospheric pressure ionization (API)	397
16.12	Tandem mass spectrometry (MS/MS)	401
16.13	Ion detection	402
16.14	Identification by means of a spectral library	404
16.15	Analysis of the elementary composition of ions	405
16.16	Determination of molecular masses from multicharged ions	407
16.17	Determination of isotope ratios for an element	408
16.18	Fragmentation of organic ions	410
	Problems	415
<b>17</b>	<b>Labelling methods</b>	<b>419</b>
17.1	The principle of labelling methodologies	419
17.2	Direct isotope dilution analysis with a radioactive label	420
17.3	Substoichiometric isotope dilution analysis	421
17.4	Radio immuno-assays (RIA)	422
17.5	Measuring radioisotope activity	423
17.6	Antigens and antibodies	425

17.7	Enzymatic-immunoassay (EIA)	426
17.8	Other immunoenzymatic techniques	429
17.9	Advantages and limitations of the ELISA test in chemistry	430
17.10	Immunofluorescence analysis (IFA)	431
17.11	Stable isotope labelling	431
17.12	Neutron activation analysis (NAA)	432
	Problems	437
<b>18</b>	<b>Elemental analysis</b>	<b>441</b>
18.1	Particular analyses	441
18.2	Elemental organic microanalysis	442
18.3	Total nitrogen analysers (TN)	445
18.4	Total sulfur analysers	447
18.5	Total carbon analysers (TC, TIC and TOC)	447
18.6	Mercury analysers	450
	Problems	451
<b>19</b>	<b>Potentiometric methods</b>	<b>453</b>
19.1	General principles	453
19.2	A particular ISE: the pH electrode	455
19.3	Other ion selective electrodes	457
19.4	Slope and calculations	460
19.5	Applications	463
	Problems	463
<b>20</b>	<b>Voltammetric and coulometric methods</b>	<b>465</b>
20.1	General principles	465
20.2	The dropping-mercury electrode	467
20.3	Direct current polarography (DCP)	467
20.4	Diffusion current	468
20.5	Pulsed polarography	470
20.6	Amperometric detection in HPLC and HPCE	472
20.7	Amperometric sensors	472
20.8	Stripping voltammetry (SV)	478
20.9	Potentiostatic coulometry and amperometric coulometry	480
20.10	Coulometric titration of water by the Karl Fischer reaction	481
	Problems	484
<b>21</b>	<b>Sample preparation</b>	<b>487</b>
21.1	The need for sample pretreatment	487
21.2	Solid phase extraction (SPE)	488
21.3	Immunoaffinity extraction	490
21.4	Microextraction procedures	491
21.5	Gas extraction on a cartridge or a disc	493
21.6	Headspace	494
21.7	Supercritical phase extraction (SPE)	496
21.8	Microwave reactors	498
21.9	On-line analysers	498

<b>22 Basic statistical parameters</b>	<b>501</b>
22.1 Mean value, accuracy of a collection of measurements	501
22.2 Variance and standard deviation	504
22.3 Random or indeterminate errors	504
22.4 Confidence interval of the mean	506
22.5 Comparison of results – parametric tests	508
22.6 Rejection criteria $Q$ -test (or Dixon test)	510
22.7 Calibration curve and regression analysis	511
22.8 Robust methods or non-parametric tests	513
22.9 Optimization through the one-factor-at-a-time (OFAT) experimentation	515
Problems	516
<b>Solutions</b>	<b>519</b>
<b>Appendix – List of acronyms</b>	<b>561</b>
<b>Bibliography</b>	<b>565</b>
<b>Table of some useful constants</b>	<b>567</b>
<b>Index</b>	<b>569</b>
