Introduction: On the Brain-to-Society
Model of Motivated Choice and the
Whole-of-Society Approach to Obesity
Prevention xxiii

LAURETTE DURÉ, ON BEHALF OF THE EDITORIAL TEAM

Part 1

FROM BRAIN TO BEHAVIOR

*A. Energy is Delight: Sensory and Reward
Systems*

1 The Pleasures and Pains of Brain Regulatory Systems for Eating 5

JAAK PANKSEPP

- 1.1 Introduction 5
- 1.2 Satiety Agents versus Aversion-Inducing Agents 6
- 1.3 Various Methodologies to Evaluate Affective Change
in Pre-Clinical Appetite Research 7
- 1.4 Conditioned Taste Aversions – From Animal Models
to Human Brain Analysis? 12
- 1.5 Conclusion 13
- References 13

2 The Neurobiology of Appetite: Hunger as Addiction 15

ALAIN DAGHER

- 2.1 Introduction 15
- 2.2 Hunger as Addiction 16

- 2.3 Response to Conditioned Cues 17
- 2.4 Functional Brain Imaging of Cue Reactivity 20
- 2.5 Conclusion 20
- References 21

3 Opioids: Culprits for Overconsumption of Palatable Foods? 23

PAWEŁ K. OLSZEWSKI, JOHAN ALSJÖ, HELGI B. SCHIÖTH
AND ALLEN S. LEVINE

- 3.1 Introduction 23
- 3.2 Opioids and Feeding Behavior in Rodent Models 24
- 3.3 Opioids and Dysregulation of Eating Patterns and
Body Weight in Human Beings 31
- 3.4 Conclusions and Perspectives 33
- References 34

4 Taste, Olfactory and Food-texture Processing in the Brain and the Control of Appetite 41

EDMUND T. ROLLS

- 4.1 Introduction 42
- 4.2 Taste-Processing in the Primate Brain 42
- 4.3 The Representation of Flavor: Convergence of Olfactory,
Taste and Visual Inputs in the Orbitofrontal Cortex 44
- 4.4 The Texture of Food, Including Fat Texture 44
- 4.5 Imaging Studies in Humans 44
- 4.6 Cognitive Effects on Representations of Food 46
- 4.7 Synthesis 47
- 4.8 Implications for Understanding, Preventing, and
Treating Obesity 47
- 4.9 Concluding Remarks 52
- References 53

5 Cortical and Limbic Activation in Response to Low- and High-calorie Food 57

WILLIAM D.S. KILLGORE

- 5.1 Introduction 57
- 5.2 Brain Responses to Food Stimuli in Healthy
Adults 58

- 5.3 Modulating Factors 61
- 5.4 Cortical and Limbic Activation to Food Images During Adolescent Development 65
- 5.5 Conclusion 68
- References 68
- 6 Reward-related Neuroadaptations Induced by Food Restriction: Pathogenic Potential of a Survival Mechanism 73**
KENNETH D. CARR
- 6.1 Introduction 73
- 6.2 Food Restriction may Augment Neurobiological Responses to Palatable Food in a Way that Promotes Addictive Behavior 75
- 6.3 Food Restriction Enhances CNS and Behavioral Responses to Drugs of Abuse and Dopamine Receptor Agonists 76
- 6.4 Food Restriction Up-regulates D1 Dopamine Receptor-Mediated Phosphorylation of Ionotropic Glutamate Receptors and Signaling Proteins that Underlie Synaptic Plasticity 77
- 6.5 Striatal Neuroadaptations Induced by Food Restriction may be Secondary to Changes in Pre-synaptic Dopamine Neuronal Function 79
- 6.6 A Schema to Consider as Research Continues 80
- References 81
- B. Executive Control Systems and the Challenges They Face in the Modern World of Plenty*
- 7 The Neuroeconomics of Food Selection and Purchase 89**
BRIAN G. ESSEX AND DAVID H. ZALD
- 7.1 Introduction 89
- 7.2 Positive Valuations 90
- 7.3 Influences on Positive Valuations 90
- 7.4 Negative Valuations 93
- 7.5 Influences on Negative Valuations 95
- 7.6 Selection 96
- 7.7 Habits 100
- 7.8 Conclusions 101
- References 101
- 8 Resisting Temptation: Impulse Control and Trade-offs between Immediate Rewards and Long-term Consequences 105**
LIN XIAO, LAURETTE DUBÉ AND ANTOINE BECHARA
- 8.1 Introduction 105
- 8.2 A Neural System for Decision-Making and Will-power: The Somatic Marker Hypothesis 106
- 8.3 Empirical Evidence for Deficits of Decision-making Underlying Obesity 108
- 8.4 Conclusion 112
- References 112
- 9 Hunger, Satiety, and Food Preferences: Effects of the Brain and the Body on the Self-Control of Eating 115**
ALEXANDRA W. LOGUE
- 9.1 Introduction 115
- 9.2 The Components of Self-control 116
- 9.3 Physiological Influences on Self-control 117
- 9.4 Promoting Self-control for a Healthy Body Weight 121
- 9.5 Conclusions 122
- References 122
- 10 Associative Learning and the Control of Food Intake 125**
LOUISE THIBAUT
- 10.1 A Behavioral Reporting of Eating 125
- 10.2 Eating is a Learned Behavior 126
- 10.3 Forms of Learned Ingestive Response 126
- 10.4 Sensory-specific Anticipatory Eating 127
- 10.5 Diurnal Rhythms and the Learned Response 130
- 10.6 Nutrients and Cognition 130
- 10.7 Dietary Fats and Learning 130
- 10.8 Our Primitive Brain 131
- References 131
- 11 Restrained Eating in a World of Plenty 135**
JANET POLIVY AND C. PETER HERMAN
- 11.1 Introduction 135
- 11.2 The Effects of Having Food Cues Present 136
- 11.3 Response to Food Cues in Restrained and Unrestrained Eaters 136
- 11.4 Food Photographs and/or Words – Indirect Food Cues 138

- 11.5 Portion Size as Food Cue 139
- 11.6 The Removal of Food Cues 140
- 11.7 Caloric Restriction in Animals and Humans 140
- 11.8 Is CR Likely to be Effective for Humans? 141
- 11.9 Caloric Restriction in the Presence of Food Cues 142
- 11.10 Dieting in a World of Food Cues 144
- References 144

C. Biological Systems that Favor a Positive Energy Balance and Body-weight Increase in a World of Plenty

- 12 The Genetic Determinants of Ingestive Behavior: Sensory, Energy Homeostasis and Food Reward Aspects of Ingestive Behavior 149**

KAREN M. ENY AND AHMED EL-SOHEMY

- 12.1 Introduction 149
- 12.2 Sensory Determinants of Food Intake 151
- 12.3 Energy Homeostasis Pathways and Food Intake 152
- 12.4 Reward Circuits and Food Intake 155
- 12.5 Conclusions 156
- References 157

- 13 Development of Human Learned Flavor Likes and Dislikes 161**

MARTIN R. YEOMANS

- 13.1 Introduction 161
- 13.2 Understanding Flavor Perception 162
- 13.3 Why Innate Flavor-liking is Rare 163
- 13.4 Flavor-preference Learning 164
- 13.5 Different Learning Mechanisms Interact to Enhance Flavor-liking 168
- 13.6 Liking and Intake: The Role of Palatability in Overeating 169
- 13.7 Acquired Liking as a Driver of Overeating 170
- 13.8 Individual Differences in Learning 171
- 13.9 Summary 173
- References 173

- 14 Biopsychological Factors and Body-weight Stability 179**

JEAN-PHILIPPE CHAPUT AND ANGELO TREMBLAY

- 14.1 Introduction 179
- 14.2 Is Knowledge-based Work a Potential Determinant of the Current Obesity Epidemic? 180
- 14.3 Is Short Sleep Duration a Potential Determinant of the Current Obesity Epidemic? 183
- 14.4 Weight Loss: Not Always Beneficial for the Psychological Health 184
- 14.5 Physical Activity and Diet: What is the Impact on Body-weight Stability? 186
- 14.6 Conclusion and Perspectives 186
- References 187

- 15 Nutrition, Epigenomics and the Development of Obesity: How the Genome Learns from Experience 191**

JOHN C. MATHERS

- 15.1 The Basics of Epigenetics and Epigenomics 191
- 15.2 Epigenetic Marks During Development and Aging 193
- 15.3 Nutritional Epigenomics 194
- 15.4 Epigenetics and Brain Function 196
- 15.5 An Epigenetic Basis for Developmental Programming of Obesity? 197
- 15.6 Physical Activity, Epigenetic Markings and Obesity 197
- 15.7 Concluding Comments 198
- References 199

- 16 The Role of Early Life Experiences in Flavor Perception and Delight 203**

JULIE A. MENNELLA AND GARY K. BEAUCHAMP

- 16.1 Introduction 203
- 16.2 Flavor and the Ontogeny of the Senses 205
- 16.3 Taste and Development 207
- 16.4 Learning about Food Flavors 211
- 16.5 Concluding Remarks 212
- References 213

- 17 Implications of the Glycemic Index in Obesity 219**
 JULIA M. W. WONG, ANDREA R. JOSSE, LIVIA S. A. AUGUSTIN, NISHITA SAXENA, LAURA CHIAVAROLI, CYRIL W. C. KENDALL AND DAVID J. A. JENKINS
- 17.1 Introduction 219
 17.2 The concept of the Glycemic Index 220
 17.3 Mechanisms of Action 221
 17.4 Effects of low GI Foods on Appetite, Food Intake and Satiety 222
 17.5 GI and Obesity 224
 17.6 GI and Diabetes 224
 17.7 GI and Cardiovascular Disease 225
 17.8 Conclusion 226
 References 226
- 18 Characterizing the Homeostatic and Hedonic Markers of the Susceptible Phenotype 231**
 JOHN BLUNDELL, ELEANOR BRYANT, CLARE LAWTON, JASON HALFORD, ERIK NASLUND, GRAHAM FINLAYSON AND NEIL KING
- 18.1 The Approach 232
 18.2 Susceptible and Resistant Phenotypes 232
 18.3 What Would a Susceptible Phenotype Look Like? 233
 18.4 What Level of Analysis is Appropriate? 233
 18.5 Appetite is Not Rocket Science – It is More Complicated 234
 18.6 Diversity, Susceptibility and Homeostasis 234
 18.7 Hedonics: The Importance of Liking and Wanting 235
 18.8 Comparing Susceptible and Resistant Phenotypes 236
 18.9 Resistance to Weight Loss – The Other Side of Susceptibility 237
 18.10 Conclusions 238
 References 238
- 19 The Carnivore Connection: Cross-population Differences in the Prevalence of Genes Producing Insulin Resistance 241**
 STEPHEN COLAGIURI, SCOTT DICKINSON AND JENNIE BRAND-MILLER
- 19.1 Background 241
 19.2 The Evolution of Insulin Resistance 242
 19.3 Determinants of Insulin Resistance 244
 19.4 Candidate Genes and Cross-population Genetic Differences 246
 19.5 Conclusion 248
