Foreword, *Nathan Keyfitz* *v*
Preface to the English Edition *ix*
Translator's Preface *xi*

PART I

PRELIMINARY CONSIDERATIONS

1. Subject Matter and Sources of Data *1*
Population Census *2*
The Census as Portrait of the Population *3*
The Census as History of the Population *3*
By-Products of the Population Census *4*
Population Changes *4*
Natality *5*
Mortality *5*
Extension of the Field of Study and of the Sources *5*
Demographic Inquiries *6*
Sample Surveys *7*
Parish Registers *8*
Published Sources of Demographic Statistics *9*
French Demographic Statistics *9*
American and British Demographic Statistics *11*
International Demographic Statistics *11*
Demographic Knowledge and Statistical Information *12*

2. Location in Time *13*
Geometric Representation of Time Instants and Time Intervals *13*
A Terminological Convention *14*
Introduction to the *Lexis* Diagram *15*
The *Lexis* Grid *17*
Generation or Cohort Life Lines *17*
Ages and Cohorts *19*
Double Classification in Demography *23*
General Remarks *26*

3. Rates in Demography *29*
Crude Rates *29*
Computation of Crude Rates *30*
Specific Rates *31*
Rates by Age *31*
Rates by Age Groups *33*
Specific Fertility Rates *37*
General Fertility Rates *38*
Age-Specific Fertility Rates *38*
Age-Specific Marriage Rates *42*
Limitations of Age-Specific Rates *44*
Rates by Birth Cohort *46*
Rates by Birth Cohort Groups *47*
Choice of Rates *49*
American and British Statistics *51*
Quotients and Probabilities *53*
Infant Mortality Rates *55*
Methods of Computing the Infant Mortality Rate *56*
Conversion of Rates to an Annual Basis *58*
General Considerations and Suggestions *59*

PART II

VITAL EVENTS

4. Analysis of Vital Events *63*
Demography as the Science of Rates *63*
Rates and Their Limits *63*
Quotients and Tables *64*
Period Observations and Cohort Observations *64*
Hypothetical Cohorts *65*
Study of Real Cohorts *66*

Cohort Analysis and Period Analysis *67*
A Paradigm in Demography *68*

5. Mortality *71*
The Crude Death Rate: Its Variations in Time and Space *71*
The Composition of Mortality by Age and Sex *75*
Causes of Death *82*
Endogenous Mortality and Exogenous Mortality *84*
Infant Mortality *84*
Past Trends and Present Level of Infant Mortality *87*
Biometric Analysis of Infant Mortality *90*
Stillbirths and Perinatal Mortality *94*
Examples of Biometric Analysis of Infant Mortality *96*
Present Level of Endogenous and Exogenous Infant Mortality 100
Comparison of Mortality Levels *101*
Use of a Standard Population *101*
Use of a Standard Mortality Schedule *104*

6. Life Tables *107*
Presentation of the Life Table *107*
Life Table Description of Mortality *111*
Construction of Life Tables *111*
Cohort Life Tables and Period Life Tables *112*
Review of Mortality Probabilities *113*
Life Table for French Males, 1954–1955 *115*
Expectation of Life *119*
Description of Mortality Using Life Table Functions *124*
Mean Length of Life in Different Periods and in Different Countries *128*
Abridged Life Tables *132*
Approximate Tables *134*
Relationship Between Mortality Rates and Mortality Probabilities *135*
Construction of the Abridged Life Tables by the Reed-Merrell Method *138*
Strictly Period Life Tables *140*
Mortality Probabilities Based on Deaths of a Single Calendar Year *141*
Projective Mortality Probabilities *144*
Strictly Period Life Tables for Multiple-Year Periods *147*
Life Table for Children Under One Year of Age *147*
Model Life Tables *148*
Use of Model Life Tables *149*

7. Marriage *153*
Crude Marriage Rates *153*
First Marriages *154*
Some Comparisons *155*
Nuptiality by Cohorts *157*
Nuptiality Tables for First Marriages *159*
Construction of a Cohort Nuptiality Table *161*
Nuptiality Table for Single French Women, 1950–1951 *164*
Period Nuptiality Tables in the Study of Marriage *165*
Some Simple Parameters of the Nuptiality Table *166*
Some International Findings *168*
The Study of Divorce and of Remarriage *169*
The Study of Widowhood *171*

8. Natality-Fertility *172*
Introductory Remarks *172*
A. Conventional Rates *174*
Crude Birth Rate *174*
Specific Fertility Rates *178*
The General Fertility Rate *178*
Age-Specific Fertility Rates *179*
Description of Fertility with the Aid of Age-Specific Rates *180*
Computation of Marital Fertility Rates Based on Family Histories *187*
The Total Fertility and Gross Reproduction Rates *188*
Mean Number of Children per Marriage *190*
Analysis Based on Age-Specific Fertility Rates *191*
Analysis by Cohorts *195*
B. Duration of Marriage *198*
Composition of Cumulative Fertility in a Marriage Cohort *200*
Fertility Rates by Duration of Marriage *204*
Period Marital Fertility and Duration of Marriage *207*
Analysis Based on Fertility Rates by Duration of Marriage *210*
Age at Marriage and Duration of Marriage *214*
Duration of Marriage and Birth Order *214*
Reconstruction of Fertility on the Basis of Family Histories *217*

C. Birth Order *218*
Parity Progression Ratios *219*
Parity Progression Ratios and Description of Marital Fertility *223*
Choice of Marriage Cohorts for the Computation of Parity Progression Ratios *224*
The Frequency of First Births in a Marriage Cohort *225*
Frequency of Legitimate First Births as a Period Index *228*
Computation of Period Parity Progression Ratios Other Than a_0 *228*
Period Parity Progression Ratios Larger Than Unity *232*
Parity Progression Ratios as an Analytical Instrument *234*
Mean Number of Children per Marriage Based on Period Parity Progression Ratios *239*
Parity Progression Ratios for Female Birth Cohorts *241*

D. Statistical Analysis of the Family *243*
Some Conventions of Terminology *243*
The Family as a Complex Statistical Unit *243*
Statistical Materials *244*
Populations Studied *245*
The Protogenetic Interval *245*
Fecundability *246*
Fertility of Very Young Women *249*
Intergenetic Intervals *250*
Comparison of Intergenetic Intervals *251*
Final Intervals *255*
Fecund Couples and Fertile Couples *256*
Concluding Remarks *258*

PART III

POPULATION SIZE AND STRUCTURE

9. Population Composition *261*
Attributes of the Structure of a Population *262*
Population Composition by Sex and by Age *263*
The Age Pyramid *263*
The Study of a Pyramid *272*
Forms of Pyramids *273*
The Ageing of a Population *277*
General Remarks on the Study of Age Composition *282*
An Example: The Professional Population *284*

Other Types of Composition *287*
Age Composition and Marital Status *287*
Economic Activity and School Attendance *291*
Other Compositional Characteristics *298*

10. Population Models *303*
Age Pyramid Associated with a Survival Curve *303*
Construction of a Stationary Population *307*
Some Properties of Stationary Populations *314*
Theoretical Stationary Populations and Real Populations *316*
The Stable Population *318*
Some Properties of Stable Populations *326*
Some Examples of Stable Populations *328*
Theoretical Stable Populations and Real Populations *333*

11. Replacement *335*
Natural Increase *335*
The Rate of Natural Increase: Variations in Time and Space *337*
Change in Populations with a Constant Rate of Natural Increase *341*
The Over-All Character of the Rate of Natural Increase *344*
The Net Reproduction Rate *344*
The Period Net Reproduction Rate *346*
Gross Rates and Net Rates *349*
Net Reproduction Rate and Lotka's Theoretical Results *350*
Limitations of the Net Reproduction Rate *352*
Growth Potential of a Population *355*
The Case of Small Population Groups *356*

PART IV

POPULATION PROJECTIONS

12. Introduction to Projections *363*
Projections and Predictions *363*
Presentation of Demographic Projections *364*
Decomposition of a Projective Computation *366*
Other Types of Projections *368*

13. Computation of Survivors *371*
Introduction to the Chapter *371*
The Projective Mortality Probability *372*

Present Level and Future Change of Mortality *374*
Projective Probabilities and the Life Table *377*
Future Change of Projective Probabilities *389*
Projective Probabilities and Model Life Tables *392*
An Example of Computation of Survivors with Model Life Tables *395*
A Very Specific Example *395*
Ease and Reliability of Computation of Survivors *400*

14. Projections of Births *402*
Projections Using Fertility Indices by Age *402*
Projections of Marriages *407*
Projections of Legitimate Births by Duration of Marriage *411*
Projections of Legitimate Births by Birth Order *414*
First-Order Births *414*
Total Live Births *417*
Choice of Methods and Hypotheses *417*
An Example of the Use of Age-Specific Fertility Rates *417*
Choice of Indices *420*

15. The Use of Demographic Projections *426*
Projections of the School-Age Population *426*
A Different Method *429*
Choice of Method *430*
Projections of the Labor Force *432*
Some Remarks *436*
General Remarks Concerning the Use of Projections by Age *441*
Use of Limiting Hypotheses *442*

PART V

MATHEMATICS AND DEMOGRAPHIC ANALYSIS

16. Description of Demographic Events *447*
Mortality *447*
Expression for Expectation of Life *452*
Analytical Expressions for Mortality Functions *453*
An Application *454*
Nuptiality *456*
Relationships Between Events *457*
First Application *459*
Second Application *462*
Fertility *463*

17. Populations *466*
General Relationships *466*
Some Population Examples *470*
Exponential Populations with Fixed Age Distributions *471*
'Malthusian' Populations *473*
Stable Populations *474*
Stable Populations as Limit Populations *476*
Stationary Populations *479*
Application *479*

Appendix *481*
Index *492*
