

# CONTENTS

PREFACE .....	5
<b>Part One. DESCRIPTION</b>	
<b>DEMOGRAPHIC ACCOUNTING AND ITS LINKS WITH THE ECONOMIC ACCOUNTS</b>	
<b>I</b>	
WHAT IS DEMOGRAPHIC ACCOUNTING .....	13
1. Scope and aims .....	13
2. Substantive uses .....	14
a) <i>In educational planning</i> .....	15
b) <i>In manpower planning</i> .....	15
c) <i>In economic planning generally</i> .....	15
<b>II</b>	
SETTING UP A SYSTEM OF DEMOGRAPHIC ACCOUNTS .....	17
1. Outlines of the system .....	17
2. National and domestic concepts .....	17
3. Migrants and visitors .....	18
4. Time intervals .....	18
5. The definition of age .....	19
6. Categories and states .....	20
7. Sequences .....	20
8. Cross-sections and vintages .....	21
9. Methods of presentation .....	22
<b>III</b>	
A NUMERICAL EXAMPLE .....	23
1. Alternative approaches .....	23
2. National and domestic accounts .....	23
3. Elaborating the accounts .....	26
4. A classification by age .....	26
5. A classification by activity .....	28
6. A classification by age and activity .....	28
7. Matrices based on opening and closing stocks .....	30
8. Matrices based on year-to-year flows .....	31
9. Vintages .....	36
10. Further developments .....	38
<b>IV</b>	
THE STATISTICAL BACKGROUND .....	41
1. Types of information .....	41
2. Stock statistics .....	41
3. Flow statistics .....	42
4. Registration numbers and individualized data systems .....	43

## V

THE ACTIVE SEQUENCE: LEARNING ACTIVITIES .....	45
1. The starting point .....	45
2. The educational boundary .....	45
3. Full-time formal education .....	47
a) <i>Institutions</i> .....	48
b) <i>Subject streams</i> .....	49
c) <i>Grades</i> .....	50
d) <i>Tests and qualifications</i> .....	51
e) <i>Curricula, teaching methods, size of classes</i> .....	52
f) <i>Administrative categories</i> .....	52
4. Part-time and informal education .....	52

## VI

THE ACTIVE SEQUENCE: EARNING ACTIVITIES .....	55
1. The organising principles .....	55
2. The production boundary .....	56
3. The labour force .....	57
4. Full-time, part-time and spare-time employment .....	58
5. The industrial classification of the labour force .....	59
6. The occupational classification of the labour force .....	59
7. The links between earning and learning .....	61
a) <i>Employment and the quality of education</i> .....	61
b) <i>Employment and the quantity of education</i> .....	62
c) <i>Employment and the age-span of education</i> .....	63
8. Teachers in the labour force .....	64

## VII

THE PASSIVE SEQUENCE .....	67
1. The characteristics of the sequence .....	67
2. Natural households .....	68
a) <i>Size and composition</i> .....	68
b) <i>Social class</i> .....	68
c) <i>Income</i> .....	69
d) <i>Race and religion</i> .....	69
e) <i>Location</i> .....	69
3. Institutional households .....	69
4. The links with the active sequence .....	70
5. The great web .....	72

## VIII

LEARNING ACTIVITIES AND THE ECONOMIC ACCOUNTS .....	73
1. The costs of education .....	73
2. Education in the national accounts .....	73
a) <i>Activity (production) accounts</i> .....	74
b) <i>Purpose accounts</i> .....	75
c) <i>Capital expenditure accounts</i> .....	75
3. A numerical example .....	76
a) <i>The educational accounts of public authorities</i> .....	76
b) <i>The educational accounts of private non-profit institutions</i> .....	80
4. The links between economic and demographic accounting .....	81

### Part Two. ANALYSIS

#### MODEL-BUILDING BASED ON THE DEMOGRAPHIC ACCOUNTS

## IX

INPUT-OUTPUT MODELS OF DEMOGRAPHIC FLOWS .....	89
1. The uses of the models .....	89
2. Framework of the models .....	89

3.	Models based on outflow coefficients (transition proportions) . . . . .	90
a)	<i>The quantity model with fixed coefficients</i> . . . . .	90
b)	<i>The model applied to a population in stationary equilibrium</i> . . . . .	91
c)	<i>Forward projections</i> . . . . .	92
d)	<i>Partitions</i> . . . . .	92
e)	<i>Changing coefficients</i> . . . . .	93
f)	<i>Multiple changes of state in a period</i> . . . . .	94
g)	<i>A model for survivors</i> . . . . .	94
h)	<i>The application to vintages</i> . . . . .	95
i)	<i>The equation of costs</i> . . . . .	95
j)	<i>The economic input structure of education</i> . . . . .	96
4.	Models based on inflow coefficients (admission proportions) . . . . .	96
a)	<i>The quantity model with fixed coefficients</i> . . . . .	97
b)	<i>The model applied to a population in stationary equilibrium</i> . . . . .	97
c)	<i>Backward projections</i> . . . . .	97
d)	<i>The equation of costs</i> . . . . .	97
5.	The interaction of the forward and backward models . . . . .	99
6.	An arithmetical illustration . . . . .	100

## X

THE MODELS APPLIED TO LEARNING ACTIVITIES: SOME NUMERICAL EXAMPLES . . . . .	103
1. The scope of the examples . . . . .	103
2. The matrix of survivors . . . . .	103
3. The matrix of transition proportions and the matrix multiplier . . . . .	105
4. The progression to age 19 . . . . .	105
5. Time spent in different activities . . . . .	107
6. The educational content of a state . . . . .	109
7. The moral of the figures . . . . .	112

## XI

PROJECTIONS AND THE PROBLEM OF CHANGING COEFFICIENTS . . . . .	113
1. Methods of projection . . . . .	113
2. Reviewing past changes . . . . .	114
3. Reviewing prospective changes . . . . .	116
4. Projecting the transition proportions . . . . .	117
5. Projecting the input-output coefficients . . . . .	119

## XII

CONCLUSIONS . . . . .	121
1. Demographic accounting in practice . . . . .	121
2. The advisability of a step-by-step approach . . . . .	121
3. The possibility of developing a standard system . . . . .	122
4. Uses and limitations of input-output models . . . . .	122
5. Further developments . . . . .	123
a) <i>Demand</i> . . . . .	123
b) <i>Supply</i> . . . . .	124
c) <i>Planning and control</i> . . . . .	125
