Preface viii

Acknowledgements ix

## **Introduction — population studies, demography and population geography** 1

1.1 The basic demographic equation 4

1.2 Demographic transition theory 4

## **Sources and quality of demographic data** 8

2.1 Population counts and censuses 8

2.2 Vital statistics 19

2.3 Survey data 24

2.4 Data errors 25

2.4.1 Checks against other demographic sources 26

2.4.2 Internal checks 28

2.4.3 Checks against independently collected data 33

2.5 Methods of error correction 33

## **The analysis of mortality** 37

3.1 Death rates and mortality rates 38

3.1.1 Crude death rates 38

3.1.2 Age-specific mortality rates 38

3.1.3 Standardised mortality rates 39

3.1.4 Infant mortality rates 42

3.2 Life tables 47

3.2.1 The estimation of period abridged life tables 48

3.2.2 Curves of life table functions 54

3.2.3 The uses of life tables 55

3.3 Mortality by cause and class 59

3.4 Conclusions 60

## **Mortality trends** 62

4.1 The pattern of mortality in Europe 62

4.1.1 The statistical period 65

4.1.2 Pre-industrial populations 71

4.2 International contrasts 77

- 4.3 The medicine versus standard of living debate 83
  - 4.3.1 Chance occurrences 84
  - 4.3.2 Environmental changes 87
  - 4.3.3 The role of medicine 92
- 4.4 Conclusions 94

**The analysis of fertility 96**

- 5.1 Marriage rates 97
- 5.2 Fertility 104
- 5.3 Period fertility 106
  - 5.3.1 Specific fertility rates 107
  - 5.3.2 Coale's indices of fertility 118
- 5.4 Cohort fertility 121
- 5.5 Family and household size 127
- 5.6 Conclusions 128

**Trends in marriage and fertility 130**

- 6.1 The 'European marriage pattern' 130
- 6.2 The determinants of fertility patterns 136
  - 6.2.1 The decline of European fertility 136
  - 6.2.2 Fertility patterns in the Third World 152
- 6.3 Conclusions 163

**Migration 165**

- 7.1 Estimates of net migration 166
- 7.2 Migration and distance 172
- 7.3 Migration matrices 183
- 7.4 Are there 'laws of migration'? 191

**Models of population structure and change 197**

- 8.1 Stationary populations 198
- 8.2 Stable populations 202
- 8.3 Estimation from incomplete data 208
- 8.4 Demographic ageing 215
- 8.5 Population growth models 218
- 8.6 The Leslie model 221
- 8.7 Conclusions 224

**Regional population projections 226**

- 9.1 Projection assumptions 227
- 9.2 National projections 229
- 9.3 Regional projections 237
- 9.4 Projections and policies 246

**Future developments in population studies and population geography 249**
