

Contents

Grecian Symbols	xxi
Roman Symbols	xxiii
1. Introduction	1
A. Historical Background	1
B. Spectroscopy	2
C. Magnetic Moments	3
D. The Spin Hamiltonian	8
E. Information Gained from Electron Spin Resonance	17
F. Systems Studied by Electron Spin Resonance	18
G. Relationship of ESR with Magnetic Susceptibility and Other Techniques	19
References	21
2. Guided Electromagnetic Waves	24
A. Reflection of Plane Waves from Conductors	24
B. Electromagnetic Field of Guided Waves	28
C. Voltage Standing-Wave Ratio	32
D. Coaxial Lines	36
E. Rectangular Waveguides	39
F. Cylindrical Waveguides	51
G. Miscellaneous Channels for Microwaves	58
H. Waveguides beyond Cutoff	60
I. Imperfect Dielectrics	61
J. Skin Effect	64
References	67
3. Microwave Generators	69
A. Magnetrons	69
B. Traveling-Wave Tubes and Backward-Wave Oscillators	69
C. Klystrons	71
D. Solid-State Generators	75
E. Klystron Power Supplies	85
F. Frequency Stabilization of Klystrons	87
G. Frequency Determination	91
References	92

4. Waveguide Components	95
A. Spectrometer Components	95
B. Attenuator	95
C. Isolator	98
D. Directional Coupler	101
E. Magic T	103
F. Circulator	107
G. Tuner	109
H. Matched Load	112
I. Iris	113
J. Mode Transducer	114
K. Slotted Section	115
L. Quarter-Wavelength Transformer	117
M. Antenna	118
N. Phase Shifter	119
O. Flexible Coupling and Rotary Joint	120
P. Flange	122
References	122
5. Resonant Cavities	123
A. Series RLC-Tuned Circuit	123
B. Microwave Resonant Cavity	125
C. Rectangular Resonant Cavities	128
D. Cylindrical Resonant Cavities	135
E. Coaxial Resonant Cavities	143
F. Coupling to Resonators	143
G. Radiation Quality Factor	151
H. Filling Factors	156
I. Measurement of rf Field H_1	171
J. Partially Loaded Cavities	174
K. Simultaneous Excitation in Two Modes	182
L. Microwave Induction Spectrometer	185
M. Resonant Cavities Containing Two Samples	188
N. Resonant Cavities Constructed from Insulating Materials	189
O. Circular Polarization and the Sign of the g Factor	189
P. Summary and Applications	196
References	205
6. Magnetic Field, Scanning and Modulation	212
A. Magnetic Field Requirements	212
B. The Magnetic Circuit	215
C. Magnetometers	220
D. Magnet Scanning	224
E. DC Detection	226

F.	Source Modulation	227
G.	Magnetic Field Modulation	229
H.	Effect of Modulation Amplitude on the Resonance Line	233
I.	Effect of Modulation Frequency on the Resonance Line	247
J.	Helmholtz Modulation Coils	251
K.	Double Modulation	253
	References	254
7.	Detection	259
A.	Calorimetric Detection	259
B.	Bolometers	260
C.	Crystals	261
D.	Balanced Mixers	268
E.	Superheterodyne Detection	270
F.	Lock-In Detectors	271
G.	Oscilloscopic Presentation	280
H.	Recorder Presentation and Response Time	281
I.	Integration	285
	References	286
8.	Vacuum Systems	289
A.	Pretreatment of Samples	289
B.	Properties of Gases <i>in Vacuo</i>	292
C.	Pumps	297
D.	Pressure-Measuring Devices	301
E.	Typical Vacuum System	306
F.	Flow Systems	309
G.	Generation of Radical Ions	312
	References	316
9.	Variable Temperatures and Pressures	319
A.	High Temperatures	319
B.	Low Temperatures (70–300 K)	324
C.	Very Low Temperatures (Below 77 K)	327
D.	High Pressures	337
	References	346
10.	Irradiation	352
A.	Types of Irradiation	352
B.	Neutrons	354
C.	Charged Particles	354
D.	Gamma Rays and X Rays	358

E.	Ultraviolet, Visible, and Infrared Radiation	360
F.	Gas Discharges	365
G.	Time and Temperature Effects	365
H.	Experimental Techniques	369
I.	Effect of Radiation on Materials	370
J.	Units and Definitions of Terms	372
	References	373
11.	Sensitivity	381
A.	Q and Frequency Changes at Resonance	381
B.	Noise Sources	389
C.	Signal-to-Noise Ratio	392
D.	Number of Spins	400
E.	Temperature	409
F.	Narrow Band Amplification and Detection	414
G.	Resonant Cavities and Helices	418
H.	Masers and Parametric Amplifiers	424
I.	Enhancement of Spectra	430
J.	Choice of Sample Size	437
K.	Standard Samples and Number of Spins	443
L.	Computer Data Processing	450
M.	Spectrometer Systems	450
	References	451
12.	Lineshapes	459
A.	Resonance Absorption Line	459
B.	First-Derivative Absorption Line	466
C.	Second-Derivative Absorption Line	477
D.	Comparison of Lorentzian and Gaussian Lineshapes	479
E.	Overlapping Resonances	486
F.	Finite-Moment Lorentzian-Type Lineshapes	486
G.	Convolution Shape	489
H.	Dispersion Line	490
I.	Dysonian Shape	494
J.	Small Clusters of Spins	503
K.	Anisotropic g Factors	506
L.	Powder Patterns	514
M.	Triplet States	520
N.	Amorphous and Semirandom Distributions	524
O.	Intermediate Motion Regime in Liquids	528
P.	Concentration and Temperature Dependence	533
Q.	Hyperfine Components in Solution	536
R.	Alternating Linewidths	538
S.	Spin Labels	539

T. Phase Transitions	540
U. Liquid Crystals	542
V. Computer Applications	544
W. Origin of Moments of Spectral Lines	546
References	553
13. Relaxation Times	577
A. General Description of Relaxation Times	577
B. Homogeneous and Inhomogeneous Broadening	583
C. Saturation Methods for Determining Relaxation Times	589
D. Pulse Spectrometers	600
E. Time-Resolved ESR	608
F. Spin Echoes	618
G. Saturation Transfer	627
H. Muon Spin Rotation	632
References	633
14. Double Resonance	644
A. Double-Resonance Schemes	644
B. ENDOR Instrumentation	649
C. Triple Resonance	661
D. ELDOR Reduction Factor	664
E. ELDOR Instrumentation	667
F. Dynamic Nuclear and Electron Polarization	674
G. Electric Field Effects	679
H. Optical Double Magnetic Resonance	684
I. Optical Double-Resonance Instrumentation	687
J. Acoustic Electron Spin Resonance	700
References	707
