

Table of Contents

Foreword	vii
Acknowledgements	ix
List of Figures	xv
Acronyms	xvii
I. General Introduction	1
II. Focus, Sources, and Structure of the thesis	3

PART I

1. The History of Neurolinguistics	7
1.1. Introduction	7
1.2. Cardiocentrism vs. Cerebrocentrism	7
1.3. A Brief Overview of Brain Anatomy	8
1.4. Localisationism vs. Holism	9
1.5. Pierre Paul Broca (1824-1880)	10
1.5.1. Broca's Aphasia	12
1.6. Carl Wernicke (1848-1905)	14
1.6.1. Wernicke's Aphasia	15
1.7. Lichtheim and the Connectionist Model of Language (1885)	16
1.7.1. Conduction Aphasia	18
1.7.2. The Role of the CC in Interhemispheric Communication	19
1.8. Korbinian Brodmann (1868-1918)	22
1.9. The Wernicke-Geschwind Model of Language (1965)	23
1.10. Conclusion	25
2. The Methodology of Neurolinguistics	27
2.1. Introduction	27
2.2. Traditional Methods	28
2.2.1. Post-Mortem Lesion studies	28
2.2.2. The Wada Test	28
2.2.3. Electrical Cortex Stimulation	29
2.2.4. Excision of Cortical Areas for Epilepsy	30
2.2.5. Dichotic Listening	30

2.3. Modern Methods	32
2.3.1. Computed Tomography (CT).....	32
2.3.2. Magnetic Resonance Imaging (MRI)	32
2.3.3. Hemodynamic Techniques	34
2.3.3.1. Positron Emission Tomography (PET)	34
2.3.3.2. Functional Magnetic Resonance Imaging (fMRI).....	35
2.3.4. Electrophysiological Techniques	36
2.3.4.1. Electroencephalography (EEG).....	37
2.3.4.1.1. N400 & Semantic Priming.....	39
2.3.4.1.2. ELAN & P600.....	42
2.3.4.1.3. Mismatch Negativity (MMN).....	44
2.3.4.2. Magnetoencephalography (MEG).....	50
2.4. Conclusion	50
3. A Modern Model of Auditory Language Processing in the Brain.....	53
3.1. Introduction	53
3.2. Processing Different Subcategories of Language in the Brain	53
3.2.1. Semantics	55
3.2.2. Syntax.....	56
3.2.3. Prosody.....	57
3.3. Conclusion	57

PART II

4. Age-Related Factors and the Critical Period Hypothesis (CPH)	61
4.1. Introduction	61
4.2. What Is a Critical Period (CP)?	61
4.3. Proponents of the CPH	63
4.4. The CPH with Regard to L1	67
4.5. The CPH with Regard to L2	68
4.5.1. Native-Like Proficiency in a Foreign Language	69
4.5.2. Effort.....	73
4.5.3. Different Underlying Brain Structures	74
4.6. Possible Alternatives to the CPH	76
4.7. Conclusion	78

5. Musical Aptitude.....	81
5.1. Introduction	81
5.2. Cerebral Dominance in Musicians.....	81
5.3. Absolute Pitch and its Neural Basis in Wernicke's Area.....	84
5.4. The Influence of Musical Aptitude and Phonological Short-Term Memory on Foreign Language Pronunciation Skills.....	88
5.5. Overlap of Musical and Linguistic Syntax in the Brain.....	94
5.6. Semantic Pitch Violations in Tonal Languages	98
5.6.1. Music Can Convey Semantic Information.....	100
5.7. Dissociations Between Language and Music.....	102
5.8. Conclusion	103
6. Gender.....	105
6.1. Introduction	105
6.2. Why Gender Matters for Neuroscience	107
6.3. Brain Hemisphericity, Handedness, and Cognition	109
6.4. Language Lateralisation.....	111
6.4.1. Prosody	113
6.4.1.1. Affective Prosody.....	114
6.4.1.2. Linguistic Prosody.....	116
6.5. Gender-Specific Patterns of Language Organisation in the Brain	118
6.5.1. The AF and Gender-Specific Language Lateralisation Patterns.....	122
6.6. The CC and its Role in Interhemispheric Communication	126
6.6.1. Gender Differences in the CC.....	127
6.6.2. Which Subregion of the CC Deals with Language?.....	133
6.7. The Origin of Sexually Dimorphic Patterns of Brain Hemisphericity.....	136
6.8. Sexual Orientation and Cognition.....	138
6.9. Conclusion	141
III. General Conclusion	143
References.....	147
