Preface *XV*

1	Fundamentals of Infrared Thermal Imaging	1
1.1	Introduction	1
1.2	Infrared Radiation	6
1.2.1	Electromagnetic Waves and the Electromagnetic Spectrum	6
1.2.2	Basics of Geometrical Optics for Infrared Radiation	10
1.2.2.1	Geometric Properties of Reflection and Refraction	10
1.2.2.2	Specular and Diffuse Reflection	12
1.2.2.3	Portion of Reflected and Transmitted Radiation: Fresnel Equations	13
1.3	Radiometry and Thermal Radiation	14
1.3.1	Basic Radiometry	15
1.3.1.1	Radiant Power, Excitance, Irradiance	15
1.3.1.2	Spectral Densities of Radiometric Quantities	16
1.3.1.3	Solid Angles	16
1.3.1.4	Radiant Intensity, Radiance, and Lambertian Emitters	17
1.3.1.5	Radiation Transfer between Surfaces: Fundamental Law of Radiometry and View Factor	19
1.3.2	Blackbody Radiation	21
1.3.2.1	Definition	21
1.3.2.2	Planck Distribution Function for Blackbody Radiation	21
1.3.2.3	Different Representations of Planck's Law	22
1.3.2.4	Stefan–Boltzmann Law	25
1.3.2.5	Band Emission	26
1.3.2.6	Order of Magnitude Estimate of Detector Sensitivities of IR Cameras	27
1.3.2.7	Fractional Changes of Blackbody Radiation upon Temperature Changes	29
1.4	Emissivity	32
1.4.1	Definition	32
1.4.2	Classification of Objects according to Emissivity	33
1.4.3	Emissivity and Kirchhoff's Law	34

1.4.4	Parameters Affecting the Value of Emissivity	35
1.4.4.1	Material	35
1.4.4.2	Surface Structure	36
1.4.4.3	Viewing Angle	38
1.4.4.4	Geometry	40
1.4.4.5	Wavelength	42
1.4.4.6	Temperature	44
1.4.4.7	Conclusion	44
1.4.5	Techniques to Measure/Guess Emissivities for Practical Work	45
1.4.6	Blackbody Radiators: Emissivity Standards for Calibration Purposes	47
1.5	Optical Material Properties in the IR	51
1.5.1	Attenuation of IR Radiation while Passing through Matter	52
1.5.2	Transmission of Radiation through the Atmosphere	53
1.5.3	Transmission of Radiation through Slablike Solid Materials	55
1.5.3.1	Nonabsorbing Slabs	55
1.5.3.2	Absorbing Slabs	57
1.5.4	Examples for Transmission Spectra of Optical Materials for IR Thermal Imaging	57
1.5.4.1	Gray Materials in Used IR Spectral Ranges	57
1.5.4.2	Some Selective Absorbers	62
1.6	Thin Film Coatings: Tailoring Desired Optical Properties for IR Optical Components	64
1.6.1	Interference of Waves	64
1.6.2	Interference and Optical Thin Films	65
1.6.3	Examples of AR Coatings	67
1.6.4	Other Optical Components	69
	References	71
2	Basic Properties of IR Imaging Systems	73
2.1	Introduction	73
2.2	Detectors and Detector Systems	73
2.2.1	Parameters That Characterize Detector Performance	74
2.2.2	Noise Equivalent Temperature Difference	74
2.2.3	Thermal Detectors	77
2.2.3.1	Temperature Change of Detector	77
2.2.3.2	Temperature-Dependent Resistance of Bolometer	78
2.2.3.3	NEP and D^* for Microbolometer	79
2.2.4	Photon Detectors	83
2.2.4.1	Principle of Operation and Responsivity	83
2.2.4.2	D^* for Signal Noise Limited Detection	85
2.2.4.3	D^* for Background Noise Limited Detection	86
2.2.4.4	Necessity to Cool Photon Detectors	90
2.2.5	Types of Photon Detectors	91
2.2.5.1	Photoconductors	91

2.2.5.2	Photodiodes	92
2.2.5.3	Schottky Barrier Detectors	93
2.2.5.4	Quantum Well Infrared Photodetectors (QWIP)	94
2.3	Basic Measurement Process	97
2.4	Complete Camera Systems	101
2.4.1	Camera Design – Image Formation	102
2.4.1.1	Scanning Systems	103
2.4.1.2	Staring Systems – Focal Plane Arrays (FPA)	103
2.4.1.3	Nonuniformity Correction (NUC)	108
2.4.1.4	Bad Pixel Correction	113
2.4.2	Photon Detector versus Bolometer Cameras	114
2.4.3	Detector Temperature Stabilization and Detector Cooling	116
2.4.4	Optics and Filters	118
2.4.4.1	Spectral Response	118
2.4.4.2	Chromatic Aberrations	118
2.4.4.3	Field of View (FOV)	120
2.4.4.4	Extender Rings	122
2.4.4.5	Narcissus Effect	124
2.4.4.6	Spectral Filters	126
2.4.5	Calibration	129
2.4.6	Camera Operation	133
2.4.6.1	Switch-on Behavior of Cameras	133
2.4.6.2	Thermal Shock Behavior	134
2.4.7	Camera Software – Software Tools	136
2.5	Camera Performance Characterization	137
2.5.1	Temperature Accuracy	137
2.5.2	Temperature Resolution – Noise Equivalent Temperature Difference (NETD)	139
2.5.3	Spatial Resolution – IFOV and Slit Response Function (SRF)	142
2.5.4	Image Quality: MTF, MRTD, and MDTD	145
2.5.5	Time Resolution – Frame Rate and Integration Time	150
	References	154
3	Advanced Methods in IR Imaging	157
3.1	Introduction	157
3.2	Spectrally Resolved Infrared Thermal Imaging	157
3.2.1	Using Filters	158
3.2.1.1	Glass Filters	159
3.2.1.2	Plastic Filters	160
3.2.1.3	Influence of Filters on Object Signal and NETD	160
3.2.2	Two-Color or Ratio Thermography	163
3.2.2.1	Neglecting Background Reflections	164
3.2.2.2	Approximations of Planck's Radiation Law	166
3.2.2.3	T_{obj} – Error for True Gray Bodies within Wien Approximation	168
3.2.2.4	Additional T_{obj} – Errors due to Nongray Objects	171

3.2.2.5	Ratio versus Single Band Radiation Thermometry	173
3.2.2.6	Application of Two-Color Thermography	174
3.2.2.7	Extension of Ratio Method and Applications	174
3.2.3	Multi- and Hyperspectral Infrared Imaging	176
3.2.3.1	Principal Idea	176
3.2.3.2	Basics of FTIR Spectrometry	178
3.2.3.3	Advantages of FTIR Spectrometers	181
3.2.3.4	Example of a Hyperspectral Imaging Instrument	184
3.3	Superframing	185
3.3.1	Method	186
3.3.2	Example for High-Speed Imaging and Selected Integration Times	189
3.3.3	Cameras with Fixed Integration Time	189
3.4	Processing of IR Images	190
3.4.1	Basic Methods of Image Processing	191
3.4.1.1	Image Fusion	192
3.4.1.2	Image Building	193
3.4.1.3	Image Subtraction	196
3.4.1.4	Consecutive Image Subtraction: Time Derivatives	198
3.4.1.5	Image Derivative in the Spatial Domain	202
3.4.1.6	Digital Detail Enhancement	203
3.4.2	Advanced Methods of Image Processing	205
3.4.2.1	Preprocessing	207
3.4.2.2	Geometrical Transformations	209
3.4.2.3	Segmentation	212
3.4.2.4	Feature Extraction and Reduction	212
3.4.2.5	Pattern Recognition	215
3.5	Active Thermal Imaging	217
3.5.1	Transient Heat Transfer – Thermal Wave Description	219
3.5.2	Pulse Thermography	221
3.5.3	Lock-in Thermography	226
3.5.4	Nondestructive Testing of Metals and Composite Structures	229
3.5.4.1	Solar Cell Inspection with Lock-in Thermography	230
3.5.5	Pulsed Phase Thermography	234
	References	234
4	Some Basic Concepts of Heat Transfer	239
4.1	Introduction	239
4.2	The Basic Heat Transfer Modes: Conduction, Convection, and Radiation	239
4.2.1	Conduction	240
4.2.2	Convection	243
4.2.3	Radiation	244
4.2.4	Convection Including Latent Heats	245
4.3	Selected Examples for Heat Transfer Problems	247

4.3.1	Overview	247
4.3.2	Conduction within Solids: the Biot Number	250
4.3.3	Steady-State Heat Transfer through One-Dimensional Walls and U-Value	252
4.3.4	Heat Transfer through Windows	257
4.3.5	Steady-State Heat Transfer in Two- and Three-Dimensional Problems: Thermal Bridges	258
4.3.6	Dew Point Temperatures	260
4.4	Transient Effects: Heating and Cooling of Objects	261
4.4.1	Heat Capacity and Thermal Diffusivity	262
4.4.2	Short Survey of Quantitative Treatments of Time-Dependent Problems	262
4.4.3	Typical Time Constants for Transient Thermal Phenomena	267
4.4.3.1	Cooling Cube Experiment	267
4.4.3.2	Theoretical Modeling of Cooling of Solid Cubes	267
4.4.3.3	Time Constants for Different Objects	270
4.5	Some Thoughts on the Validity of Newton's Law	271
4.5.1	Theoretical Cooling Curves	272
4.5.2	Relative Contributions of Radiation and Convection	275
4.5.3	Experiments: Heating and Cooling of Light Bulbs	276
	References	279
5	Basic Applications for Teaching: Direct Visualization of Physics Phenomena	281
5.1	Introduction	281
5.2	Mechanics: Transformation of Mechanical Energy into Heat	281
5.2.1	Sliding Friction and Weight	282
5.2.2	Sliding Friction during Braking of Bicycles and Motorbikes	283
5.2.3	Sliding Friction: the Finger or Hammer Pencil	286
5.2.4	Inelastic Collisions: Tennis	286
5.2.5	Inelastic Collisions: the Human Balance	288
5.2.6	Temperature Rise of Floor and Feet while Walking	289
5.2.7	Temperature Rise of Tires during Normal Driving of a Vehicle	290
5.3	Thermal Physics Phenomena	291
5.3.1	Conventional Hot-Water-Filled Heaters	292
5.3.2	Thermal Conductivities	292
5.3.3	Convections	295
5.3.4	Evaporative Cooling	298
5.3.5	Adiabatic Heating and Cooling	300
5.3.6	Heating of Cheese Cubes	302
5.3.7	Cooling of Bottles and Cans	305
5.4	Electromagnetism	308
5.4.1	Energy and Power in Simple Electric Circuits	308
5.4.2	Eddy Currents	309
5.4.3	Thermoelectric Effects	310

5.4.4	Experiments with Microwave Ovens	312
5.4.4.1	Setup	312
5.4.4.2	Visualization of Horizontal Modes	313
5.4.4.3	Visualization of Vertical Modes	314
5.4.4.4	Aluminum Foil in Microwave Oven	315
5.5	Optics and Radiation Physics	316
5.5.1	Transmission of Window Glass, NaCl, and Silicon Wafer	316
5.5.2	From Specular to Diffuse Reflection	318
5.5.3	Blackbody Cavities	320
5.5.4	Emissivities and Leslie Cube	322
5.5.5	From Absorption to Emission of Cavity Radiation	323
5.5.6	Selective Absorption and Emission of Gases	326
	References	327
6	IR Imaging of Buildings and Infrastructure	329
6.1	Introduction	329
6.1.1	Publicity of IR Images of Buildings	330
6.1.2	Just Colorful Images?	331
6.1.2.1	Level and Span	331
6.1.2.2	Sequences of Color and Color Palette	333
6.1.3	General Problems Associated with Interpretation of IR Images	333
6.1.4	Energy Standard Regulations for Buildings	336
6.2	Some Standard Examples for Building Thermography	338
6.2.1	Half-Timbered Houses behind Plaster	338
6.2.2	Other Examples with Outside Walls	342
6.2.3	How to Find Out Whether a Defect is Energetically Relevant?	342
6.2.4	The Role of Inside Thermal Insulation	344
6.2.5	Floor Heating Systems	347
6.3	Geometrical Thermal Bridges versus Structural Problems	348
6.3.1	Geometrical Thermal Bridges	349
6.3.2	Structural Defects	352
6.4	External Influences	356
6.4.1	Wind	356
6.4.2	The Effect of Moisture in Thermal Images	358
6.4.3	Solar Load and Shadows	361
6.4.3.1	Modeling Transient Effects Due to Solar Load	361
6.4.3.2	Experimental Time Constants	364
6.4.3.3	Shadows	366
6.4.3.4	Solar Load of Structures within Walls	367
6.4.3.5	Direct Solar Reflections	369
6.4.4	General View Factor Effects in Building Thermography	373
6.4.5	Night Sky Radiant Cooling and View Factor	375
6.4.5.1	Cars Parked Outside or Below a Carport	377
6.4.5.2	Walls of Houses Facing Clear Sky	378
6.4.5.3	View Factor Effects: Partial Shielding of Walls by Carport	379

6.4.5.4	View Factor Effects: The Influence of Neighboring Buildings and Roof Overhang	380
6.5	Windows	381
6.6	Thermography and Blower-Door-Tests	386
6.7	Quantitative IR Imaging: Total Heat Transfer Through Building Envelope	391
6.8	Conclusions	394
	References	394
7	Industrial Application: Detection of Gases	397
7.1	Introduction	397
7.2	Spectra of Molecular Gases	397
7.3	Influences of Gases on IR Imaging: Absorption, Scattering, and Emission of Radiation	403
7.3.1	Introduction	403
7.3.2	Interaction of Gases with IR Radiation	403
7.3.3	Influence of Gases on IR Signals from Objects	405
7.4	Absorption by Cold Gases: Quantitative Aspects	408
7.4.1	Attenuation of Radiation by a Cold Gas	408
7.4.2	From Transmission Spectra to Absorption Constants	410
7.4.3	Transmission Spectra for Arbitrary Gas Conditions and IR Camera Signal Changes	411
7.4.4	Calibration Curves for Gas Detection	413
7.4.5	Problem: the Enormous Variety of Measurement Conditions	414
7.5	Thermal Emission from Hot Gases	416
7.6	Practical Applications: Gas Detection with Commercial IR Cameras	417
7.6.1	Organic Compounds	417
7.6.2	Some Inorganic Compounds	420
7.6.3	CO ₂ – Gas of the Century	424
7.6.3.1	Comparison between Broadband and Narrowband Detection	426
7.6.3.2	Detecting Volume Concentration of CO ₂ in Exhaled Air	427
7.6.3.3	Absorption, Scattering, and Thermal Emission of IR Radiation	427
7.6.3.4	Quantitative Result: Detecting Minute Amounts of CO ₂ in Air	430
7.6.3.5	Quantitative Result: Detection of Well-Defined CO ₂ Gas Flows from a Tube	430
	Appendix 7.A: Survey of Transmission Spectra of Various Gases	433
	References	441
8	Microsystems	445
8.1	Introduction	445
8.2	Special Requirements for Thermal Imaging	446
8.2.1	Mechanical Stability of Setup	446
8.2.2	Microscope Objectives, Close-up Lenses, Extender Rings	446
8.2.3	High-Speed Recording	447

8.3	Microfluidic Systems	449
8.3.1	Microreactors	449
8.3.1.1	Stainless Steel Falling Film Microreactor	449
8.3.1.2	Glass Microreactor	452
8.3.1.3	Silicon Microreactor	455
8.3.2	Micro Heat Exchangers	456
8.4	Microsensors	459
8.4.1	Thermal IR Sensors	459
8.4.1.1	Infrared Thermopile Sensors	459
8.4.1.2	Infrared Bolometer Sensors	461
8.4.2	Semiconductor Gas Sensors	465
8.5	Microsystems with Electric to Thermal Energy Conversion	467
8.5.1	Miniaturized Infrared Emitters	468
8.5.2	Micro Peltier Elements	470
8.5.3	Cryogenic Actuators	471
	References	474
9	Selected Topics in Research and Industry	477
9.1	Introduction	477
9.2	Thermal Reflections	477
9.2.1	Transition from Directed to Diffuse Reflections from Surfaces	478
9.2.2	Reflectivities for Selected Materials in the Thermal Infrared	482
9.2.2.1	Metals	483
9.2.2.2	Nonmetals	484
9.2.3	Measuring Reflectivity Spectra: Laboratory Experiments	485
9.2.3.1	Polarizers	485
9.2.3.2	Experimental Setup for Quantitative Experiments	485
9.2.3.3	Example for Measured Reflectivity Curve	486
9.2.4	Identification and Suppression of Thermal Reflections: Practical Examples	487
9.2.4.1	Silicon Wafer	487
9.2.4.2	Glass Plates	488
9.2.4.3	Varnished Wood	489
9.2.4.4	Conclusions	489
9.3	Metal Industry	490
9.3.1	Direct Imaging of Hot Metal Molds	491
9.3.2	Manufacturing Hot Solid Metal Strips: Thermal Reflections	491
9.3.3	Determination of Metal Temperatures if Emissivity is Known	493
9.3.4	Determination of Metal Temperatures for Unknown Emissivity: Gold Cup Method	494
9.3.5	Determination of Metal Temperatures for Unknown Emissivity: Wedge and Black Emitter Method	495
9.3.6	Other Applications of IR Imaging in the Metal Industry	497
9.4	Automobile Industry	498
9.4.1	Quality Control of Heating Systems	498

- 9.4.2 Active and Passive Infrared Night Vision Systems 500
- 9.5 Airplane and Spacecraft Industry 503
 - 9.5.1 Imaging of Aircraft 503
 - 9.5.2 Imaging of Spacecraft 505
- 9.6 Miscellaneous Industrial Applications 508
 - 9.6.1 Predictive Maintenance and Quality Control 508
 - 9.6.2 Pipes and Valves in a Power Plant 509
 - 9.6.3 Levels of Liquids in Tanks in the Petrochemical Industry 510
 - 9.6.4 Polymer Molding 513
 - 9.6.5 Plastic Foils: Selective Emitters 515
 - 9.6.6 Line Scanning Thermometry of Moving Objects 518
 - 9.6.6.1 Line Scans of Fast-Moving Objects with IR Camera 518
 - 9.6.6.2 Line Scanning Thermometry of Slow-Moving Objects 520
- 9.7 Electrical Applications 522
 - 9.7.1 Microelectronic Boards 522
 - 9.7.2 Old Macroscopic Electric Boards 523
 - 9.7.3 Substation Transformers 524
 - 9.7.4 Overheated High-Voltage Line 527
 - 9.7.5 Electric Fan Defects 528
 - 9.7.6 Oil Levels in High-Voltage Bushings 528
 - 9.7.6 References 530
- 10 Selected Applications in Other Fields 535**
 - 10.1 Medical Applications 535
 - 10.1.1 Introduction 535
 - 10.1.2 Diagnosis and Monitoring of Pain 537
 - 10.1.3 Acupuncture 541
 - 10.1.4 Breast Thermography and Detection of Breast Cancer 544
 - 10.1.5 Other Medical Applications 545
 - 10.1.5.1 Raynaud's Phenomenon 545
 - 10.1.5.2 Pressure Ulcers 546
 - 10.2 Animals and Veterinary Applications 548
 - 10.2.1 Images of Pets 549
 - 10.2.2 Zoo Animals 549
 - 10.2.3 Equine Thermography 550
 - 10.2.4 Others 551
 - 10.3 Sports 553
 - 10.3.1 High-Speed Recording of Tennis Serve 553
 - 10.3.2 Squash and Volleyball 557
 - 10.3.3 Other Applications in Sports 557
 - 10.4 Arts: Music, Contemporary Dancing, Paintings, and Sculpture 559
 - 10.4.1 Musical Instruments 560
 - 10.4.2 Contemporary Dancing 561
 - 10.4.3 Other Applications in the Arts 565
 - 10.5 Surveillance and Security: Range of IR Cameras 566
