

CONTENTS

Preface

v

Part I. Alternative Investments

| | |
|-------------------------------------------------------------------------------------------|----|
| Chapter 1. Socially Responsible Investments | 3 |
| <i>Sven Hroß, Christofer Vogt and Rudi Zagst</i> | |
| 1.1 Introduction | 4 |
| 1.2 Recent Research on SRI | 5 |
| 1.3 How Sustainable is Sustainability? | 6 |
| 1.3.1 Description of the Dataset | 6 |
| 1.3.2 Introduction to Markov Transition Matrices | 6 |
| 1.3.3 Results of Markov Transition Matrices | 7 |
| 1.4 SRI in Portfolio Context | 8 |
| 1.4.1 Description of the Dataset and Statistical Properties | 8 |
| 1.4.2 Markov-Switching Model | 11 |
| 1.4.3 Fitting the Model Parameters | 11 |
| 1.4.4 Simulation of Returns | 13 |
| 1.4.5 Portfolio Optimization Models | 13 |
| 1.4.6 Definition of Investor Types | 15 |
| 1.4.7 Optimal Portfolios | 15 |
| 1.5 Conclusion | 18 |
| Chapter 2. Listed Private Equity in a Portfolio Context | 21 |
| <i>Philipp Aigner, Georg Beyschlag, Tim Friederich, Markus Kalepky and Rudi Zagst</i> | |
| 2.1 Introduction | 22 |
| 2.2 Defining Private Equity Categories | 23 |
| 2.2.1 Financing Stages | 23 |
| 2.2.2 Divestment Strategies | 24 |

| | | |
|-----------------------------------------------------------|-----------------------------------------------------------------------------------|----|
| 2.2.3 | Type of Financing | 25 |
| 2.2.4 | Classification of Private Equity Fund Investments | 26 |
| 2.2.4.1 | Venture capital funds | 26 |
| 2.2.4.2 | Buyout funds | 27 |
| 2.2.4.3 | Leveraged buyouts (LBO) | 27 |
| 2.3 | Investment Possibilities — One Asset, Many Classes | 28 |
| 2.3.1 | Direct Investments | 28 |
| 2.3.2 | Private Equity Funds | 29 |
| 2.3.2.1 | Key players | 29 |
| 2.3.3 | Cash Flow Structure of a Private Equity Fund | 31 |
| 2.3.4 | Fund-of-Funds | 32 |
| 2.3.4.1 | Structure of a private equity fund-of-funds | 32 |
| 2.3.4.2 | Advantages | 32 |
| 2.3.4.3 | Disadvantages | 33 |
| 2.3.5 | Publicly Traded Private Equity | 33 |
| 2.3.6 | Secondary Transactions | 34 |
| 2.3.6.1 | Types of secondary transactions | 34 |
| 2.3.6.2 | Buyer's motivation | 35 |
| 2.4 | Private Equity as Alternative Asset Class in an Investment Portfolio | 35 |
| 2.4.1 | Characteristics of LPE Return Series | 36 |
| 2.4.2 | Modeling Return Series with Markov-Switching Processes | 37 |
| 2.4.2.1 | Markov-Switching models | 37 |
| 2.4.2.2 | Fitting the parameters | 39 |
| 2.4.2.3 | Simulation of return paths | 40 |
| 2.4.3 | Listed Private Equity in Asset Allocation | 40 |
| 2.4.3.1 | Performance measurement | 40 |
| 2.4.3.2 | Portfolio optimization frameworks | 42 |
| 2.4.3.3 | Definition of investor types | 43 |
| 2.4.3.4 | Optimization of portfolios | 44 |
| 2.5 | Conclusion | 47 |
| Chapter 3. Alternative Real Assets in a Portfolio Context | | 51 |
| <i>Wolfgang Mader, Sven Treu and Sebastian Willutzky</i> | | |
| 3.1 | Introduction | 52 |
| 3.2 | Overview on Alternative Real Assets | 52 |
| 3.3 | Modeling Photovoltaic Investments | 53 |
| 3.3.1 | General Approach | 53 |
| 3.3.2 | Definition of the Investment Project | 54 |

| | | |
|-------------------------------------------------------|-------------------------------------------------------------------------|----|
| 3.3.3 | Modeling of Risk Factors | 56 |
| 3.3.3.1 | Economic factors | 56 |
| 3.3.3.2 | Non-economic factors | 57 |
| 3.3.3.3 | Historical analysis of monthly global irradiance | 58 |
| 3.3.3.4 | Monte Carlo analysis of yearly global irradiance | 61 |
| 3.4 | Photovoltaic Investments in a Portfolio Context | 63 |
| 3.4.1 | Setting the Portfolio Context | 63 |
| 3.4.2 | Including Photovoltaic Investments in a Portfolio | 64 |
| 3.4.3 | Results | 66 |
| 3.5 | Conclusion | 68 |
| Chapter 4. The Freight Market and Its Derivatives | | 71 |
| <i>Rüdiger Kiesel and Patrick Scherer</i> | | |
| 4.1 | Introduction: the Freight Market | 72 |
| 4.1.1 | Vessels | 72 |
| 4.1.2 | Cargo | 72 |
| 4.1.3 | Routes | 73 |
| 4.2 | Freight Rates: What Drives the Market? | 74 |
| 4.2.1 | Demand for Shipping Capacity | 75 |
| 4.2.2 | Supply of Shipping Capacity | 76 |
| 4.2.3 | Costs | 77 |
| 4.3 | Freight Derivatives: Hedging or Speculating? | 77 |
| 4.3.1 | Forward Freight Agreement | 77 |
| 4.3.2 | Freight Futures | 78 |
| 4.4 | Explanatory Variables | 79 |
| 4.4.1 | Explanatory Power | 80 |
| 4.4.2 | Granger Causality | 82 |
| 4.4.3 | Selection Algorithm “Top Five” | 83 |
| 4.4.4 | Cointegration | 84 |
| 4.5 | Predicting Freight Spot and Futures Rates | 86 |
| 4.6 | The Backtesting Algorithm | 88 |
| 4.7 | Conclusion | 90 |
| Chapter 5. On Forward Price Modeling in Power Markets | | 93 |
| <i>Fred Espen Benth</i> | | |
| 5.1 | Introduction | 94 |
| 5.2 | HJM Approach to Power Forward Pricing | 95 |
| 5.3 | Power Forwards and Approximation by Geometric Brownian Motion | 98 |

| | | |
|------------------------------------------------------------|---------------------------------------------------------------------------|-----|
| 5.3.1 | A Geometric Brownian Motion Dynamics by Volatility Averaging | 101 |
| 5.3.2 | A Geometric Brownian Motion Dynamics by Moment Matching | 103 |
| 5.3.3 | The Covariance Structure Between Power Forwards | 106 |
| 5.3.4 | The Distribution of a Power Forward | 108 |
| 5.3.5 | Numerical Analysis of the Power Forward Distribution | 110 |
| 5.4 | Pricing of Options on Power Forwards | 114 |
| 5.5 | Conclusion | 119 |
| Chapter 6. Pricing Certificates Under Issuer Risk | | 123 |
| <i>Barbara Götz, Rudi Zagst and Marcos Escobar</i> | | |
| 6.1 | Introduction | 124 |
| 6.2 | The Model | 125 |
| 6.3 | Pricing of Certificates Under Issuer Risk | 126 |
| 6.3.1 | Building Blocks | 126 |
| 6.3.2 | Index Certificates | 130 |
| 6.3.3 | Participation Guarantee Certificates | 132 |
| 6.3.4 | Bonus Guarantee Certificates | 134 |
| 6.3.5 | Discount Certificates | 135 |
| 6.3.6 | Bonus Certificates | 136 |
| 6.4 | Conclusion | 139 |
| Chapter 7. Asset Allocation with Credit Instruments | | 147 |
| <i>Barbara Menzinger, Anna Schlösser and Rudi Zagst</i> | | |
| 7.1 | Introduction | 148 |
| 7.2 | Simulation Framework | 150 |
| 7.3 | Framework for Total Return Calculation | 153 |
| 7.4 | Optimization Framework | 156 |
| 7.4.1 | Mean-Variance Optimization | 156 |
| 7.4.2 | CVaR Optimization | 157 |
| 7.5 | Model Calibration and Simulation Results | 157 |
| 7.5.1 | Mean-Variance Approach | 162 |
| 7.5.2 | Conditional Value at Risk | 164 |
| 7.5.3 | Comparison of Selected Optimal Portfolios | 167 |
| 7.6 | Summary and Conclusion | 170 |
| Chapter 8. Cross Asset Portfolio Derivatives | | 175 |
| <i>Stephan Höcht, Matthias Scherer and Philip Seegerer</i> | | |

| | | |
|---------|---------------------------------------------------------------------------|-----|
| 8.1 | Introduction to Cross Asset Portfolio Derivatives | 175 |
| 8.1.1 | Definitions and Examples | 176 |
| 8.2 | Collateralized Obligations | 179 |
| 8.3 | A Comparison of CFO with CTSO | 179 |
| 8.3.1 | Structural Features of CFO | 179 |
| 8.3.2 | Structural Features of CTSO | 181 |
| 8.3.3 | The Different Risks | 181 |
| 8.3.4 | Correlation of Tail Events in CTSO | 181 |
| 8.4 | Pricing Cross Asset Portfolio Derivatives | 182 |
| 8.4.1 | Pricing Trigger Swaps | 182 |
| 8.4.2 | Pricing n th-to-Trigger Baskets | 183 |
| 8.4.3 | Pricing CTSO | 184 |
| 8.4.4 | Modeling Approaches | 185 |
| 8.4.4.1 | The structural approach | 185 |
| 8.4.4.2 | The copula approach | 186 |
| 8.4.5 | An Example for an n th-to Trigger Basket | 188 |
| 8.4.5.1 | A pricing exercise of Example 3 <i>(structural approach)</i> | 188 |
| 8.4.5.2 | A pricing exercise of Example 3 <i>(copula approach)</i> | 189 |
| 8.4.5.3 | Resulting model spreads | 190 |
| 8.5 | Outlook | 194 |
| 8.6 | Conclusion | 195 |

Part II. Alternative Strategies

| | | |
|------------|---------------------------------------------|-----|
| Chapter 9. | Dynamic Portfolio Insurance Without Options | 201 |
|------------|---------------------------------------------|-----|

Dominik Dersch

| | | |
|-------|-----------------------------------|-----|
| 9.1 | Introduction | 202 |
| 9.2 | Simple Strategies | 203 |
| 9.2.1 | Buy-and-Hold | 203 |
| 9.2.2 | Stop-Loss | 203 |
| 9.2.3 | The Bond Floor Strategy | 204 |
| 9.2.4 | Plain Vanilla CPPI | 205 |
| 9.3 | Historical Simulation I | 206 |
| 9.4 | Advanced Features | 209 |
| 9.4.1 | Transaction Costs | 210 |
| 9.4.2 | Transaction Filter | 210 |
| 9.4.3 | Lock-in Levels | 211 |

| | | |
|-------------------------------------------------------------------------------|--------------------------------------------------------------------------------|-----|
| 9.4.4 | Leverage and Constrain of Exposure | 212 |
| 9.4.5 | Rebalancing Strategies for the Risky Portfolio | 213 |
| 9.4.6 | CPPI and Beyond | 213 |
| 9.5 | Historical Simulation II | 214 |
| 9.5.1 | Transaction Costs and Transaction Filter | 214 |
| 9.5.2 | Lock-in Levels | 216 |
| 9.5.3 | The Use of Leverage | 220 |
| 9.5.4 | CPPI on a Multi-Asset Risky Portfolio | 222 |
| 9.6 | Implement a Dynamic Protection Strategy with ETF | 223 |
| 9.7 | Closing Remarks | 224 |
| Chapter 10. How Good are Portfolio Insurance Strategies? | | 227 |
| <i>Sven Balder and Antje Mahayni</i> | | |
| 10.1 | Introduction | 228 |
| 10.2 | Optimal Portfolio Selection with Finite Horizons | 230 |
| 10.2.1 | Problem (A) | 233 |
| 10.2.2 | Problem (B) | 234 |
| 10.2.3 | Problem (C) | 235 |
| 10.2.4 | Comparison of Optimal Solutions | 238 |
| 10.3 | Utility Loss Caused by Guarantees | 242 |
| 10.3.1 | Justification of Guarantees and Empirical Observations | 242 |
| 10.3.2 | Utility Loss | 242 |
| 10.4 | Utility Loss Caused by Trading Restrictions and Transaction Costs | 246 |
| 10.4.1 | Discrete-Time CPPI | 246 |
| 10.4.2 | Discrete-Time Option-Based Strategy | 249 |
| 10.4.3 | Comments on Utility Loss and Shortfall Probability | 250 |
| 10.5 | Utility Loss Caused by Guarantees and Borrowing Constraints | 252 |
| 10.6 | Conclusion | 254 |
| Chapter 11. Portfolio Insurances, CPPI and CPDO, Truth or Illusion? | | 259 |
| <i>Elisabeth Joossens and Wim Schoutens</i> | | |
| 11.1 | Introduction | 260 |
| 11.2 | Credit Risk and Credit Default Swaps | 261 |
| 11.2.1 | Credit Risk | 261 |
| 11.2.2 | Credit Default Swaps (CDS) | 265 |
| 11.3 | Portfolio Insurances | 267 |

| | | |
|----------------------------------------------------------------------------|------------------------------------------------------------------------------|-----|
| 11.4 | Modeling of CPPI Dynamics Using Multivariate Jump-Driven Processes | 270 |
| 11.4.1 | Multivariate Variance Gamma Modeling | 270 |
| 11.4.2 | Swaptions on Credit Indices | 273 |
| 11.4.2.1 | Black's model | 273 |
| 11.4.2.2 | The variance gamma model | 274 |
| 11.4.3 | Spread Modeling by Correlated VG Processes | 275 |
| 11.4.3.1 | The pricing of CPPIs | 275 |
| 11.4.3.2 | Gap risk | 279 |
| 11.5 | Recent Developments for CPPI | 281 |
| 11.5.1 | Portfolio Insurance: The Extreme Value Approach to the CPPI Method | 282 |
| 11.5.2 | VaR Approach for Credit CPPI | 283 |
| 11.5.3 | CPPI with Cushion Insurance | 284 |
| 11.6 | A New Financial Instrument: Constant Proportion Debt Obligations | 285 |
| 11.6.1 | The Structure | 285 |
| 11.6.2 | CPDOs in the Spotlight | 289 |
| 11.6.3 | Rating CPDOs Under VG Dynamics | 289 |
| 11.7 | Comparison Between CPPI and CPDO | 291 |
| 11.8 | Conclusions | 292 |
| Chapter 12. On the Benefits of Robust Asset Allocation for CPPI Strategies | | 295 |
| <i>Katrin Schöttle and Ralf Werner</i> | | |
| 12.1 | Motivation | 296 |
| 12.2 | The Financial Market | 296 |
| 12.2.1 | The Basic Financial Market | 297 |
| 12.2.2 | The Riskless Asset | 298 |
| 12.2.3 | The Risky Asset | 298 |
| 12.2.4 | Classical Mean–Variance Analysis | 300 |
| 12.2.5 | The Trading Strategy | 302 |
| 12.3 | The Standard CPPI Strategy | 302 |
| 12.3.1 | The Simple Case | 303 |
| 12.3.2 | The General Case | 305 |
| 12.3.3 | Shortfall Probability of CPPI Strategies | 308 |
| 12.3.4 | Improving CPPI Strategies | 310 |
| 12.3.5 | CPPI Strategies Under Estimation Risk | 313 |
| 12.4 | Robust Mean–Variance Optimization and Improved CPPI Strategies | 316 |
| 12.4.1 | Robust Mean–Variance Analysis | 317 |
| 12.4.2 | Uncertainty Sets Via Expert Opinions or Related Estimators | 317 |

| | |
|-------------------------------------------------------------------------------------|-----|
| 12.4.3 Uncertainty Sets Via Confidence Sets | 319 |
| 12.4.4 Usage and Implications for CPPI Strategies | 321 |
| 12.4.5 CPPIs with Robust Asset Allocations | 323 |
| 12.5 Conclusion | 324 |
| Chapter 13. Robust Asset Allocation Under Model Risk | 327 |
| <i>Pauline Barrieu and Sandrine Tobelem</i> | |
| 13.1 Background | 328 |
| 13.2 A Robust Approach to Model Risk | 329 |
| 13.2.1 The Absolute Ambiguity Robust Adjustment | 330 |
| 13.2.2 Relative Ambiguity Robust Adjustment | 333 |
| 13.2.3 ARA Parametrization | 334 |
| 13.3 Some Definitions Relative to the Ambiguity-Adjusted Asset Allocation | 335 |
| 13.4 Empirical Tests | 336 |
| 13.4.1 Portfolios Tested | 337 |
| 13.4.2 Performance Measures | 339 |
| 13.4.3 Results | 340 |
| 13.4.3.1 Performances of the different models | 341 |
| 13.4.3.2 SEU portfolio | 342 |
| 13.4.3.3 Ambiguity robust portfolios | 342 |
| 13.5 Conclusion | 343 |
| Chapter 14. Semi-Static Hedging Strategies for Exotic Options | 345 |
| <i>Hansjörg Albrecher and Philipp Mayer</i> | |
| 14.1 Introduction | 346 |
| 14.2 Hedging Path-Independent Options | 347 |
| 14.2.1 Plain Vanilla Options with Arbitrary Strikes are Liquid | 348 |
| 14.2.2 Finitely Many Liquid Strikes | 349 |
| 14.3 Hedging Barrier and Other Weakly Path Dependent Options | 350 |
| 14.3.1 Model-Dependent Strategies: Perfect Replication | 351 |
| 14.3.2 Model-Dependent Strategies: Approximations | 357 |
| 14.3.3 Model-Independent Strategies: Robust Strategies | 359 |
| 14.4 Hedging Strongly Path-Dependent Options | 361 |
| 14.4.1 Lookback Options | 362 |
| 14.4.2 Asian Options | 364 |
| 14.5 Case Study: Model-Dependent Hedging of Discretely Sampled Options | 367 |
| 14.6 Conclusion and Future Research | 370 |

| | |
|-------------------------------------------------------------------------------------------|-----|
| Chapter 15. Discrete-Time Variance-Optimal Hedging in Affine Stochastic Volatility Models | 375 |
| <i>Jan Kallsen, Richard Vierthauer, Johannes Muhle-Karbe and Natalia Shenkman</i> | |
| 15.1 Introduction | 376 |
| 15.2 Discrete-Time Variance-Optimal Hedging | 377 |
| 15.3 The Laplace Transform Approach | 378 |
| 15.4 Application to Affine Stochastic Volatility Models | 380 |
| 15.5 Numerical Illustration | 388 |
| <i>Index</i> | 395 |
