Part I Getting started: remote sensing fundamentals

1 Introduction: Why ecologists and conservation biologists use remote sensing

1.1 Our aims and objectives	3
1.2 Why remote sensing tools are important	4
1.2.1 <i>Observation</i>	4
1.2.2 <i>Analysis and measurement</i>	6
1.2.3 <i>Mapping</i>	8
1.2.4 <i>Monitoring over time and space</i>	8
1.2.5 <i>Decision support</i>	9
1.3 Organization of the book	9
1.3.1 <i>Getting started: remote sensing fundamentals</i>	9
1.3.2 <i>Ecological systems and processes</i>	10
1.3.3 <i>Putting it into practice: conservation applications</i>	12
1.3.4 <i>Appendices</i>	14
1.4 Remote sensing: a technology in development	14

2 When to use remote sensing

2.1 Physical and practical limitations of remotely sensed imagery	15
2.1.1 <i>Resolution</i>	16
2.1.2 <i>Working at different scales: practical and conceptual limitations</i>	23
2.1.3 <i>Using remote sensing to study social phenomena</i>	25
2.2 Accuracy	25
2.2.1 <i>Types of error</i>	25
2.2.2 <i>Defining acceptable accuracy</i>	27
2.2.3 <i>Measuring and reporting accuracy</i>	28
2.2.4 <i>Understanding accuracy statistics</i>	30
2.2.5 <i>Trends in accuracy assessment</i>	31

2.3	Assessing in-house capabilities (institutional limitations)	32
2.3.1	<i>Doing work in-house or contracting out</i>	33
2.3.2	<i>Training</i>	33
2.3.3	<i>Finding a good remote sensing consultant</i>	35
2.4	Summary	35
3	Working with images	37
3.1	Choosing the right type of imagery	39
3.1.1	<i>Multispectral imaging</i>	39
3.1.2	<i>Spatial resolution and scale</i>	40
3.1.3	<i>Temporal options: seasonality and frequency of acquisitions</i>	46
3.1.4	<i>Requesting imagery</i>	46
3.1.5	<i>Making the decision</i>	47
3.2	Software options	48
3.2.1	<i>Graphics software</i>	48
3.2.2	<i>GIS software</i>	48
3.2.3	<i>Specialized remote sensing software</i>	49
3.2.4	<i>Mathematical and visualization software</i>	49
3.2.5	<i>Deciding which software to use</i>	49
3.3	Visualizing the data	50
3.3.1	<i>Combining bands to make a color composite</i>	50
3.3.2	<i>Image enhancements</i>	50
3.3.3	<i>Image sharpening with a panchromatic band</i>	53
3.3.4	<i>Three-dimensional viewing</i>	57
3.4	Additional processing	59
3.4.1	<i>Radiometric processing</i>	59
3.4.2	<i>Reflectance: the holy grail of remote sensing</i>	60
3.4.3	<i>Geometric processing</i>	62
3.5	Image interpretation and classification	64
3.5.1	<i>Visual interpretation</i>	65
3.5.2	<i>Image classification</i>	67
3.5.3	<i>Accuracy assessment</i>	78
3.6	Summary	78
	Part II Ecological systems and processes	
4	Measuring and monitoring land cover, land use, and vegetation characteristics	81
4.1	Land cover classification	81

4.1.1	<i>Land cover versus land use</i>	81
4.1.2	<i>Options for output products</i>	82
4.1.3	<i>Comparing land cover maps with image photoproducts</i>	83
4.1.4	<i>Getting started</i>	84
4.1.5	<i>Requirements for creating a land cover classification map</i>	84
4.1.6	<i>Define the study area</i>	85
4.1.7	<i>Defining a classification scheme</i>	86
4.1.8	<i>Selecting imagery</i>	88
4.1.9	<i>Image preprocessing</i>	88
4.1.10	<i>Ancillary data</i>	90
4.1.11	<i>Classification methods</i>	90
4.1.12	<i>Field validation</i>	91
4.1.13	<i>Accuracy assessment</i>	91
4.1.14	<i>Using the completed map</i>	91
4.2	<i>Monitoring land cover change</i>	92
4.2.1	<i>Reasons for mapping land cover change</i>	92
4.2.2	<i>Monitoring changes in forest cover</i>	93
4.2.3	<i>Visual methods for monitoring land cover change</i>	93
4.2.4	<i>Selecting a change detection method</i>	95
4.2.5	<i>Dealing with different data sources</i>	101
4.2.6	<i>Data normalization</i>	103
4.2.7	<i>Validating change detection results</i>	104
4.2.8	<i>Planning a land cover change project</i>	104
4.3	<i>Vegetation characteristics</i>	107
4.3.1	<i>Using vegetation indices</i>	108
4.3.2	<i>Principle components analysis (PCA)</i>	111
4.3.3	<i>Other MODIS vegetation data products</i>	112
4.3.4	<i>Using active sensors for vegetation mapping</i>	112
4.4	<i>Summary</i>	119
5	Terrain and soils	120
5.1	<i>Elevation</i>	120
5.1.1	<i>What is elevation?</i>	121
5.1.2	<i>Representing three-dimensional surfaces</i>	123
5.1.3	<i>Acquiring elevation data</i>	126
5.1.4	<i>DEM preprocessing</i>	128
5.1.5	<i>Products derived from DEMs</i>	130
5.1.6	<i>Using DEMs to improve mapping accuracy</i>	131
5.1.7	<i>Three-dimensional analysis and visualization</i>	135

5.2	Geology and soils	136
5.2.1	<i>Geology</i>	137
5.2.2	<i>Soils</i>	137
5.3	Summary	138
6	Marine and coastal environments	140
6.1	Separating the surface, water column, and bottom	141
6.1.1	<i>Water types</i>	143
6.1.2	<i>Water column correction</i>	147
6.1.3	<i>Bathymetry</i>	150
6.1.4	<i>Top-down versus bottom-up approaches</i>	152
6.2	Water properties	154
6.2.1	<i>Chlorophyll</i>	156
6.2.2	<i>Primary productivity</i>	157
6.2.3	<i>Harmful algal blooms</i>	158
6.2.4	<i>Sea surface temperature (SST)</i>	160
6.2.5	<i>Predicting coral bleaching</i>	161
6.2.6	<i>Salinity</i>	162
6.2.7	<i>Ocean circulation</i>	164
6.3	Shallow benthic environments	165
6.3.1	<i>Coral reefs</i>	165
6.3.2	<i>Seagrasses and kelp</i>	170
6.4	Summary	173
7	Wetlands—estuaries, inland wetlands, and freshwater lakes	174
7.1	Mangroves	179
7.2	Salt and freshwater marshes	181
7.2.1	<i>Lidar mapping of wetland elevation</i>	182
7.2.2	<i>Lidar mapping of wetland vegetation</i>	184
7.2.3	<i>Spectral characteristics used in mapping of marshes</i>	185
7.2.4	<i>Combining lidar and multispectral data</i>	188
7.2.5	<i>Radar mapping of wetlands</i>	189
7.2.6	<i>Using radar to map hurricane-related flooding</i>	190
7.3	Shoreline mapping of lakes and rivers	192
7.4	Water quality mapping and monitoring	192
7.4.1	<i>Hyperspectral remote sensing of water quality</i>	192
7.4.2	<i>Thermal mapping</i>	193
7.5	Summary	194

8 Atmosphere and climate	195
8.1 Climate and the physical environment	196
8.2 Clouds	200
8.2.1 <i>Clouds and climate</i>	201
8.2.2 <i>How cloud remote sensing works</i>	201
8.3 Aerosols	204
8.3.1 <i>Aerosols and climate</i>	205
8.3.2 <i>Aerosols and biological productivity</i>	209
8.3.3 <i>How aerosol remote sensing works</i>	209
8.4 Precipitation	210
8.4.1 <i>The basics of precipitation</i>	211
8.4.2 <i>Ground-based radar</i>	211
8.4.3 <i>How remote sensing of precipitation works</i>	212
8.4.4 <i>A caveat regarding precipitation products</i>	216
8.4.5 <i>Global precipitation climatology product</i>	218
8.4.6 <i>Feedbacks between vegetation and precipitation</i>	219
8.5 Winds	221
8.5.1 <i>The basics of global winds</i>	224
8.5.2 <i>How remote sensing of wind works</i>	226
8.5.3 <i>Winds and ocean productivity</i>	228
8.6 Temperature and the radiation budget	230
8.6.1 <i>Temperature and vegetation</i>	230
8.6.2 <i>Temperature and species</i>	231
8.6.3 <i>The basics of Earth's radiation budget and temperature</i>	232
8.6.4 <i>Remote sensing of Earth's radiation budget and temperature</i>	233
8.6.5 <i>Long-term temperature data sets</i>	237
8.7 Global climate modeling applications to ecology and conservation	238
8.8 Summary and a potential way forward through ecological forecasting	241
9 Disturbances: fires and floods	242
9.1 Fires and logging in the humid tropics	242
9.1.1 <i>Tropical fires and biodiversity</i>	246
9.1.2 <i>Tropical fires and the atmosphere</i>	246
9.2 Remote sensing of fire and its aftermath	247
9.2.1 <i>Prefire assessment</i>	247
9.2.2 <i>Fire detection and monitoring</i>	247

9.2.3	<i>Postfire assessment</i>	252
9.2.4	<i>Some satellite fire products</i>	253
9.3	Remote sensing of floods	254
9.3.1	<i>Passive and active remote sensing of floods</i>	255
9.4	Other disturbance mechanisms	258
9.4.1	<i>Volcanoes</i>	258
9.4.2	<i>Dams</i>	260
9.5	Summary	260

Part III Putting remote sensing into practice: conservation and ecology applications

10	Landscape fragmentation	263
10.1	Fragmentation basics	264
10.2	Fragmentation metrics	267
10.3	Issues in processing fragmentation data	270
10.4	Composition metrics	274
10.5	Configuration, edge, and connectivity metrics	276
10.6	Fractal dimensions	279
10.7	Connectivity metrics	280
10.8	Route network metrics	281
10.9	Fragmentation analyses at different scales using remote sensing	283
10.10	Summary	284
11	Human interfaces and urban change	285
11.1	Importance of remotely sensed data for studying urban interfaces	286
11.2	Data sources for urban classification	287
11.3	Data analysis techniques	289
11.3.1	<i>Image rectification</i>	289
11.3.2	<i>Preprocessing</i>	292
11.3.3	<i>Change detection algorithms</i>	293
11.4	Accuracy measurements for urban change	296
11.5	Texture analysis	298
11.6	Complex urban land cover analyses	301

11.7	Urban heat islands	305
11.8	Summary	306
12	Protected area design and monitoring	307
12.1	Planning for protected areas	309
12.1.1	<i>Designing individual protected areas</i>	309
12.1.2	<i>Designing networks of protected areas</i>	310
12.2	Managing and monitoring protected areas	314
12.3	Integrating remotely sensed data and social and economic considerations into protected area planning and monitoring	316
12.4	Global-scale monitoring and resources for remotely sensed data and protected areas	317
12.5	Summary and cautions about the use of remotely sensed data for protected area design and monitoring	319
13	Integrating field data	321
13.1	Integrating field data and remotely sensed data	322
13.1.1	<i>Remote sensing versus field methods</i>	322
13.1.2	<i>Handheld sensors: an intersection of remote sensing and field methods</i>	323
13.1.3	<i>Ground-level field photography</i>	325
13.1.4	<i>Telemetry</i>	328
13.2	Summary	332
14	Linking remote sensing with modeling	333
14.1	What are models?	335
14.2	How do I start? Steps to developing models	336
14.2.1	<i>Establish problem statement</i>	336
14.2.2	<i>Define your model system's boundaries</i>	337
14.2.3	<i>Define your modeling approach</i>	338
14.2.4	<i>Identify model variables</i>	339
14.2.5	<i>Test and validate your model</i>	342
14.3	What remote sensing products are commonly used in modeling?	343
14.3.1	<i>Climate</i>	344
14.3.2	<i>Terrain and soils</i>	345
14.3.3	<i>Land cover</i>	346
14.3.4	<i>Land use</i>	347

14.3.5	<i>Landscape pattern descriptors</i>	347
14.4	Summary	349
15	Global conservation	350
15.1	Remote sensing and the road to a global ecology	350
15.2	Remote sensing and global conservation	357
15.2.1	<i>Global priority setting for conservation</i>	358
15.2.2	<i>Monitoring changes on earth's surface</i>	360
15.2.3	<i>Ecological forecasting</i>	361
15.3	A look ahead	361
15.4	Summary	363
Part IV Appendices		
Appendix 1	The electromagnetic spectrum	367
Appendix 2	Image-processing software	370
A2.1	Graphics software	370
A2.1.1	<i>Proprietary</i>	370
A2.1.2	<i>Open source</i>	371
A2.2	Geographic information system (GIS) software	371
A2.2.1	<i>Proprietary</i>	371
A2.2.2	<i>Open source</i>	371
A2.3	Specialized remote sensing software	372
A2.3.1	<i>Proprietary</i>	372
A2.3.2	<i>Open source</i>	373
A2.4	Numerical analysis software	373
A2.4.1	<i>Proprietary</i>	373
A2.4.2	<i>Open source</i>	374
Appendix 3	Open source software	375
A3.1	What is open source software?	375
A3.2	Where does open source software fit in?	376
A3.3	So, how can you help?	376
A3.4	What is out there and where can I get it?	376

Appendix 4 Satellites and sensors	377
A4.1 Optical	377
A4.2 Radar	381
A4.3 Free remotely sensed data archives	382
Appendix 5 Visual interpretation	384
A5.1 What do you need to interpret images?	384
A5.2 Different levels of interpretation	385
A5.3 The elements of image interpretation	387
A5.3.1 <i>Color and tone</i>	387
A5.3.2 <i>Size and shape</i>	389
A5.3.3 <i>Texture and pattern</i>	389
A5.3.4 <i>Shadows</i>	391
A5.3.5 <i>Relative and absolute location</i>	392
A5.3.6 <i>Time</i>	393
A5.4 Practice, practice, practice	395
Appendix 6 Systems for observing climate and atmospheric phenomena	396
A6.1 Clouds	396
A6.2 Aerosols	404
A6.3 Precipitation	414
A6.4 Temperature	415
<i>References</i>	416
<i>Index</i>	451
