Appendix F	Statistical Tables	551
Table F.A	Cumulative probabilities of the standard normal distribution. Entry area $1-\alpha$ under the standard normal curve from $-\infty$ to $z(1-\alpha)$	552
Table F.B	Table of critical values for the t -distribution	553
Table F.C	Table of critical values of the chi-square (χ^2) distribution	554
Table F.D1	Critical values of the F -distribution at $\alpha = 0.05$	555
Table F.D2	Critical values of the F -distribution at $\alpha = 0.01$	556
Table F.E	Critical values of U for a one-tailed alpha at 0.025 or a two-tailed alpha at 0.05	556
Table F.F1	Table of critical values of ρ (Spearman Rank correlation coefficient)	557
Table F.F2	Table of critical values of r (Pearson's correlation coefficient)	558
Table F.G	Critical values for Duncan's multiple range test (p , df, $\alpha = 0.05$)	559
Table F.H1	Critical values of the triangle test for similarity (maximum number correct as a function of the number of observations (N), beta, and proportion discriminating)	560
Table F.H2	Critical values of the duo-trio and paired comparison tests for similarity (maximum number correct as a function of the number of observations (N), beta, and proportion discriminating)	561
Table F.I	Table of probabilities for values as small as observed values of x associated with the binomial test ($p=0.50$)	562

Table F.J	Critical values for the differences between rank sums ($\alpha = 0.05$)	563
Table F.K	Critical values of the beta binomial distribution	564
Table F.L	Minimum numbers of correct judgments to establish significance at probability levels of 5 and 1% for paired difference and duo-trio tests (one tailed, $p = 1/2$) and the triangle test (one tailed, $p = 1/3$)	565
Table F.M	Minimum numbers of correct judgments to establish significance at probability levels of 5 and 1% for paired preference test (two tailed, $p = 1/2$)	566
Table F.N1	Minimum number of responses (n) and correct responses (x) to obtain a level of Type I and Type II risks in the triangle test. P_d is the chance-adjusted percent correct or proportion of discriminators	567
Table F.N2	Minimum number of responses (n) and correct responses (x) to obtain a level of Type I and Type II risks in the duo-trio test. P_c is the chance-adjusted percent correct or proportion of discriminators	567
Table F.O1	d' and B (variance factor) values for the duo-trio and 2-AFC (paired comparison) difference tests	568
Table F.O2	d' and B (variance factor) values for the triangle and 3-AFC difference tests	569
Table F.P	Random permutations of nine	571
Table F.Q	Random numbers	572
