

Table of Contents

Preface	5
Organizers	6
Sponsors and supporters	7
Table of Contents	9
Submissions	11
Andreas R. Gruber, Stephan H. Bernhart, You Zhou, Ivo L. Hofacker RNALfoldz: efficient prediction of thermodynamically stable, local secondary structures	11
Florian Battke, Stephan Körner, Steffen Hüttner, Kay Nieselt Efficient sequence clustering for RNA-seq data without a reference genome	21
Florian Blöchl, Maria L. Hartsperger, Volker Stümpflen, Fabian J. Theis Uncovering the structure of heterogenous biological data: fuzzy graph partitioning in the k-partite setting	31
Sergiy Bogomolov, Martin Mann, Björn Voß, Andreas Podelski, Rolf Backofen Shape-based barrier estimation for RNAs	41
Thomas Fober, Marco Mernberger, Gerhard Klebe, Eyke Hüllermeier Efficient Similarity Retrieval of Protein Binding Sites based on Histogram Comparison	51
Peter Husemann, Jens Stoye Repeat-aware Comparative Genome Assembly	61
Katrin Bohl, Luís F. de Figueiredo, Oliver Hädicke, Steffen Klamt, Christian Kost, Stefan Schuster, Christoph Kaleta CASOP GS: Computing intervention strategies targeted at production improvement in genome-scale metabolic networks	71
Jan Grau, Daniel Arend, Ivo Grosse, Artemis G. Hatzigeorgiou, Jens Keilwagen, Manolis Maragkakis, Claus Weinholdt, Stefan Posch Predicting miRNA targets utilizing an extended profile HMM	81

Arli A. Parikesit, Peter F. Stadler, Sonja J. Prohaska	
Quantitative Comparison of Genomic-Wide Protein Domain Distributions . . .	93
Jan Budczies, Carsten Denkert, Berit M. Müller, Scarlet F. Brockmüller,	
Manfred Dietel, Jules L. Griffin, Matej Oresic, Oliver Fiehn	
METAtarget – extracting key enzymes of metabolic regulation from high-throughput metabolomics data using KEGG REACTION information	103
Andreas Gogol-Döring, Wei Chen	
Finding Optimal Sets of Enriched Regions in ChIP-Seq Data	113
Enrico Glaab, Jonathan M. Garibaldi, Natalio Krasnogor	
Learning pathway-based decision rules to classify microarray cancer samples .	123
