	Preface	*page* xi
	Acknowledgments	xiii
1	Introduction	1
	1.1 Historical and modern role of modeling and simulation	1
	1.2 Credibility of scientific computing	8
	1.3 Outline and use of the book	15
	1.4 References	17
Part I	**Fundamental concepts**	19
2	Fundamental concepts and terminology	21
	2.1 Development of concepts and terminology	21
	2.2 Primary terms and concepts	32
	2.3 Types and sources of uncertainties	51
	2.4 Error in a quantity	57
	2.5 Integration of verification, validation, and prediction	59
	2.6 References	75
3	Modeling and computational simulation	83
	3.1 Fundamentals of system specifications	84
	3.2 Fundamentals of models and simulations	89
	3.3 Risk and failure	115
	3.4 Phases of computational simulation	116
	3.5 Example problem: missile flight dynamics	127
	3.6 References	137
Part II	**Code verification**	145
4	Software engineering	146
	4.1 Software development	147
	4.2 Version control	151
	4.3 Software verification and validation	153
	4.4 Software quality and reliability	159
	4.5 Case study in reliability: the T experiments	161

4.6 Software engineering for large software projects 162
4.7 References 167
5 Code verification 170
5.1 Code verification criteria 171
5.2 Definitions 175
5.3 Order of accuracy 180
5.4 Systematic mesh refinement 185
5.5 Order verification procedures 192
5.6 Responsibility for code verification 204
5.7 References 205
6 Exact solutions 208
6.1 Introduction to differential equations 209
6.2 Traditional exact solutions 210
6.3 Method of manufactured solutions (MMS) 219
6.4 Physically realistic manufactured solutions 234
6.5 Approximate solution methods 239
6.6 References 244
Part III Solution verification 249
7 Solution verification 250
7.1 Elements of solution verification 250
7.2 Round-off error 252
7.3 Statistical sampling error 258
7.4 Iterative error 260
7.5 Numerical error versus numerical uncertainty 283
7.6 References 284
8 Discretization error 286
8.1 Elements of the discretization process 288
8.2 Approaches for estimating discretization error 297
8.3 Richardson extrapolation 309
8.4 Reliability of discretization error estimators 317
8.5 Discretization error and uncertainty 322
8.6 Roache's grid convergence index (GCI) 323
8.7 Mesh refinement issues 329
8.8 Open research issues 334
8.9 References 338
9 Solution adaptation 343
9.1 Factors affecting the discretization error 343
9.2 Adaptation criteria 349
9.3 Adaptation approaches 356
9.4 Comparison of methods for driving mesh adaptation 360
9.5 References 366

Part IV Model validation and prediction 369
10 Model validation fundamentals 371
10.1 Philosophy of validation experiments 372
10.2 Validation experiment hierarchy 388
10.3 Example problem: hypersonic cruise missile 396
10.4 Conceptual, technical, and practical difficulties of validation 401
10.5 References 405
11 Design and execution of validation experiments 409
11.1 Guidelines for validation experiments 409
11.2 Validation experiment example: Joint Computational/Experimental Aerodynamics Program (JCEAP) 422
11.3 Example of estimation of experimental measurement uncertainties in JCEAP 437
11.4 Example of further computational–experimental synergism in JCEAP 455
11.5 References 465
12 Model accuracy assessment 469
12.1 Elements of model accuracy assessment 470
12.2 Approaches to parameter estimation and validation metrics 479
12.3 Recommended features for validation metrics 486
12.4 Introduction to the approach for comparing means 491
12.5 Comparison of means using interpolation of experimental data 500
12.6 Comparison of means requiring linear regression of the experimental data 508
12.7 Comparison of means requiring nonlinear regression of the experimental data 514
12.8 Validation metric for comparing p-boxes 524
12.9 References 548
13 Predictive capability 555
13.1 Step 1: identify all relevant sources of uncertainty 557
13.2 Step 2: characterize each source of uncertainty 565
13.3 Step 3: estimate numerical solution error 584
13.4 Step 4: estimate output uncertainty 599
13.5 Step 5: conduct model updating 622
13.6 Step 6: conduct sensitivity analysis 633
13.7 Example problem: thermal heating of a safety component 638
13.8 Bayesian approach as opposed to PBA 664
13.9 References 665

Part V Planning, management, and implementation issues 671
14 Planning and prioritization in modeling and simulation 673
14.1 Methodology for planning and prioritization 673
14.2 Phenomena identification and ranking table (PIRT) 678
14.3 Gap analysis process 684
14.4 Planning and prioritization with commercial codes 690
14.5 Example problem: aircraft fire spread during crash landing 691
14.6 References 694
15 Maturity assessment of modeling and simulation 696
15.1 Survey of maturity assessment procedures 696
15.2 Predictive capability maturity model 702
15.3 Additional uses of the PCMM 721
15.4 References 725
16 Development and responsibilities for verification, validation and uncertainty quantification 728
16.1 Needed technical developments 728
16.2 Staff responsibilities 729
16.3 Management actions and responsibilities 738
16.4 Development of databases 747
16.5 Development of standards 753
16.6 References 755
Appendix: Programming practices 757
Index 762
The color plates will be found between pages 370 and 371.
