

## Contents

<b>Preface</b>	<i>IX</i>
<b>1 Introduction</b>	<i>1</i>
1.1 Collider Energy	<i>2</i>
1.2 Collider Intensity	<i>4</i>
1.3 Why Big Colliders and Big Detectors Are Necessary	<i>6</i>
1.4 The Tringides Challenge	<i>7</i>
1.5 Useful Units, and One-Dimensional Lorentz Transformation	<i>8</i>
1.6 Problems	<i>10</i>
<b>2 Particles of the “Standard Model”</b>	<i>11</i>
2.1 Some Bubble Chamber Photographs	<i>18</i>
2.1.1 Berkeley 10-in. Bubble Chamber	<i>20</i>
2.2 Problems	<i>21</i>
<b>3 Particle Detectors</b>	<i>25</i>
3.1 Particles Traveling through Atoms	<i>25</i>
3.1.1 Particle Interactions with Atomic Electrons ( $e^-$ )	<i>26</i>
3.1.2 Particle Interactions with Nuclei ( $Ze$ )	<i>31</i>
3.2 Tracking Systems	<i>38</i>
3.2.1 Momentum Measurement of Charged Particles	<i>40</i>
3.2.2 Impact Parameter Measurement	<i>43</i>
3.2.3 Summary of Tracking	<i>46</i>
3.3 Calorimetry: Energy Measurement	<i>48</i>
3.3.1 EM Particles, $e^\pm$ and $\gamma$	<i>49</i>
3.3.2 Hadronic Particles (Particles Composed of Quarks)	<i>51</i>
3.3.3 Calorimeter Constant Terms	<i>65</i>
3.4 Time, or Velocity, Measurements	<i>68</i>
3.5 Signal Distribution among Channels	<i>71</i>
3.6 Problems	<i>72</i>
<b>4 Particle Identification</b>	<i>77</i>
4.1 Discriminating Charged Leptons from Charged Pions	<i>79</i>
4.1.1 Telling a $\mu^\pm$ from a $\pi^\pm$	<i>79</i>
4.1.2 Telling an $e^\pm$ from a $\pi^\pm$	<i>82</i>

4.2	Discriminating Hadrons from Each Other	87
4.2.1	Telling a $K^\pm$ or a $p$ from a $\pi^\pm$	87
4.2.2	Neutral Hadrons: $n$ and $K_L^0$	88
4.3	Identifying “Jets”	88
4.3.1	Discriminating a Light Quark ( $u, d, s$ ) from a Gluon ( $g$ )	88
4.4	Identifying $W^\pm \rightarrow q\bar{q}$ and $Z^0 \rightarrow q\bar{q}$ Decays into Hadrons	89
4.5	Identifying Particles by Their Lifetimes	89
4.5.1	Identifying Weak $s$ -baryon Decays: $\Lambda(sdu), \Sigma(sqq), \Xi(ssq),$ and $\Omega(sss)$	89
4.5.2	Identifying Weak Heavy Quark Decays: $B(b\bar{q})$ and $D(c\bar{q})$	90
4.5.3	Identifying a $\tau^\pm$ Lepton	90
4.6	Telling a $\gamma$ from $\pi^0 \rightarrow \gamma\gamma$ and $e^\pm \rightarrow e\gamma$	92
4.7	Identifying a Neutrino ( $\nu$ ) in an Event	93
4.8	Transition Radiation Proportional to $\gamma$	93
4.9	Time to Mass	93
4.10	Problems	95
<b>5</b>	<b>Particle Accelerators and Colliders</b>	<b>97</b>
5.1	Cyclotrons, Betatrons, Synchrotrons, and FFAGs	98
5.1.1	Beam Rates, RF, Machine Geometry	100
5.1.2	Machine Backgrounds	101
5.2	Beam Optics	102
5.3	Detectors at Electron, Proton, and Muon Colliders	105
5.3.1	Electron Colliders: $e^+e^-$	105
5.3.2	Proton Colliders: $pp$ and $\bar{p}p$	107
5.3.3	Muon Colliders: $\mu^+\mu^-$	108
5.3.4	Asymmetric Colliders: $e^-p$ and $B$ Factories	108
5.4	Problems	109
<b>6</b>	<b>General Principles of Big Detectors</b>	<b>111</b>
6.1	Detectors at Big Colliders	113
6.2	Design Principles	114
6.3	Magnetic Field Geometries	116
6.3.1	Summary of Magnetic Field Geometries	126
6.4	Tracking System Geometries	128
6.5	Calorimeter Geometries	130
6.6	Muon System Geometries	131
6.7	Problems and Strategies	132
6.7.1	Problems with Solenoidal Iron-based Muon Systems	132
6.7.2	Problems with the Distribution of Material	135
6.8	Problems	135
<b>7</b>	<b>4th Concept Detector</b>	<b>137</b>
7.1	Description of the 4th Detector	138
7.1.1	Gross Design	144
7.1.2	Tracking Systems: Pixel Vertex and Main Tracking	146

7.1.3	Calorimeters: Fiber and Crystal Dual Readout	149
7.1.4	Magnetic Field Configuration and the Muon System	157
7.2	Dual-solenoid Detectors and Machine–Detector Interface (mdi)	160
7.2.1	Detector Benefits	160
7.2.2	Machine and Interaction Region (IR) Benefits	161
7.2.3	Physics Benefits	162
7.3	Problems	163
<b>8</b>	<b>The Sociology of Collaborations</b>	<b>165</b>
8.1	Big vs. Small	165
8.2	Structure of a Group	166
8.3	Complexity	170
8.4	Software	170
8.5	Funding	172
8.6	International and Cultural Aspects	173
8.7	Problems	176
<b>Appendix A Detectors and Instrumentation in 1960</b>		<b>179</b>
<b>Appendix B Detector Design Strategies</b>		<b>185</b>
B.1	Comments about ATLAS and CMS	185
B.2	Creativity vs. Conservatism	186
B.3	Main Design Issues for a Big Collider Experiment	187
B.4	Future Detectors	190
B.5	Outline of Necessary Beam Tests with Particle “Jets”	191
<b>Appendix C Glossary</b>		<b>193</b>
<b>References</b>		<b>203</b>
<b>Index</b>		<b>209</b>
