Preface page vii

1 Oscillations over long times in numerical Hamiltonian systems ***E. Hairer & C. Lubich*** 1

1 Introduction 1
2 Backward error analysis 3
3 Modulated Fourier expansion 7
4 Nonlinear wave equation 16
5 Linear multistep methods 19

2 Highly oscillatory quadrature ***D. Huybrechs & S. Olver*** 25

1 Introduction 25
2 Asymptotics 28
3 Filon method 33
4 Levin collocation method 39
5 Steepest descent methods 43
6 Other methods 46

3 Rapid function approximation by modified Fourier series ***D. Huybrechs & S. Olver*** 51

1 Introduction 51
2 Univariate approximation 53
3 Polyharmonic approximation 60
4 Multivariate approximation 62
5 Convergence acceleration 66
6 Concluding remarks 69

4 Approximation of high frequency wave propagation problems ***M. Motamed & O. Runborg*** 72

1 Introduction 72
2 Geometrical optics 74

3 Geometrical theory of diffraction 82

5 Wavelet-based numerical homogenization ***B. Engquist & O. Runborg*** 98
1 Introduction 98
2 Projection generated homogenization 103
3 Wavelet-based numerical homogenization 105
4 Numerical examples 115

6 Plane wave methods for approximating the time harmonic wave equation ***T. Luostari, T. Huttunen & P. Monk*** 127
1 Introduction 127
2 Derivation of the UWVF 131
3 Discretization of the UWVF 135
4 Analysis of the UWVF 138
5 Numerical implementation and results for the UWVF 141
6 Conclusion 149

7 Boundary integral methods in high frequency scattering ***S.N. Chandler-Wilde & I.G. Graham*** 154
1 Introduction 154
2 Hybrid approximation spaces 160
3 Stability and conditioning 176
4 Implementation 187

8 Novel analytical and numerical methods for elliptic boundary value problems ***A.S. Fokas & E.A. Spence*** 194
1 Introduction 194
2 The derivations of integral representations 200
3 The elimination of the unknown boundary values using algebraic manipulations 205
4 Formulation of Riemann–Hilbert problems 223
5 A new numerical method 226
