

Contents

- 1 Robert W Floyd, in Memoriam 1
- 2 The Bose–Nelson Sorting Problem 19
- 3 A One-Way, Stackless Quicksort Algorithm 31
- 4 Optimum Binary Search Trees 35
- 5 Dynamic Huffman Coding 51
- 6 Inhomogeneous Sorting 71
- 7 Lexicographic Permutations with Restrictions 79
- 8 Nested Satisfiability 91
- 9 Fast Pattern Matching in Strings 99
- 10 Addition Machines 137
- 11 A Simple Program Whose Proof Isn't 155
- 12 Verification of Link-Level Protocols 167
- 13 A Problem in Concurrent Programming Control 175
- 14 Optimal Prepaging and Font Caching 181
- 15 A Generalization of Dijkstra's Algorithm 209
- 16 Two-Way Rounding 219
- 17 Matroid Partitioning 235
- 18 Irredundant Intervals 245
- 19 Simple Word Problems in Universal Algebras 275
- 20 Efficient Representation of Perm Groups 315
- 21 An Algorithm for Brownian Zeros 329
- 22 Semi-Optimal Bases for Linear Dependencies 337
- 23 Evading the Drift in Floating-Point Addition 341
- 24 Deciphering a Linear Congruential Encryption 349
- 25 Computation of Tangent, Euler, and Bernoulli Numbers 359

viii *Selected Papers on Design of Algorithms*

26	Euler's Constant to 1271 Places	373
27	Evaluation of Polynomials by Computer	383
28	Minimizing Drum Latency Time	397
	Index	437
