Preface	ix
Quantum stochastic calculus L. Accardi	1
Glivenko–Cantelli convergence for weighted empirical and quantile processes of U-statistic structure M. Aerts, P. Janssen and D. Mason	23
On symmetry properties and nonparametric estimates of the $\nu$ -th order spectral density of a stationary random process A. G. Alekseev	31
Large deviations for first-passage times A.K. Aleškevičienė	39
Quasi-average approach to the description of the limit states of the <i>n</i> -vector Curie–Weiss ferromagnet N. Angelescu and V.A. Zagrebnov	69
Inequalities at the Markov approximation of lumped processes V.V. Anisimov	85
Remarks on limit theorems for sequences of random variables with random index T.A. Azlarov, A.A. Dzamirzaev and A.G. Abdullaev	99
Continuity of local time for Markov processes with stationary independent increments <i>M.T. Barlow</i>	115
Detection and diagnosis of changes in the A.R. part of an A.R.M.A. model with nonstationary unknown M.A. coefficients M. Basseville, A. Benveniste, G. Moustakides and A. Rougée	119
Nonparametric estimation of distribution functions based on incomplete data	
Yu. K. Belyayev	123
Diffusion processes on the group $T^{\infty}$ and elliptic equations of infinitely many variables	145
Α. D. Βεπαικον απά Ι. Υ. Γανιον	145

Ciesielski363	On optimal controls in the problem of locally absolutely continuous change of measure (compact sets of decisions) R.J. Chitashvili and M.G. Mania	331
a stable limit law 357 G. Christoph 357 Multiple stable stochastic integrals Z. Ciesielski 363	Non-uniform estimates of the remainder term in limit theorems with	
Multiple stable stochastic integrals Z. Ciesielski 363	a stable limit law G. Christoph	357
	Multiple stable stochastic integrals Z. Ciesielski	363

A generalization of <i>p</i> -type spaces A.N. Čuprunov	375
Smooth measures on infinite dimensional manifolds and forward Kolmogorov equation Yu. L. Dalecky	385
The structure of distributions of convex functionals	405
Wiener germs applied to the tails of M-estimators H. Dinges	405
On the asymptotic behaviour of the linear stochastic heat equation solutions	
A.Ya. Dorogovtsev, S.D. Ivasishen and A.G. Kukush	419
Some universal Donsker classes of functions R.M. Dudley	433
Duplicates in mixed sequences and a frequency duplication principle. Methods and applications A.T. Fomenko	439
Bootstrapping empirical measures indexed by Vapnik–Chervonenkis classes of sets <i>P. Gaenssler</i>	467
A remark on the Central Limit Theorem for random measures and processes	
E. Giné and J. Zinn	483
Elliptic law and elements of G-analysis V.L. Girko	489
Mathematical aspects on the variation of air pollutant concentrations J. Grandell	509
Weak solutions of the stochastic evolution and invariance principles B. Grigelionis and R. Mikulevičius	513
Optimal stopping of a Markov chain with vector-valued gain function U.S. Gugerli	523
Some strong laws of large numbers in Banach spaces with regular norms	
B. Heinkel	529

Contents
