

# Table of Contents

<b>1</b>	<b>A First Survey</b> .....	<b>1</b>
<b>2</b>	<b>Kinematics</b> .....	<b>13</b>
2.1	One-dimensional motion .....	13
2.1.1	Three examples for the motion in one space dimension	14
2.1.2	Velocity .....	19
2.1.3	Acceleration .....	22
2.1.4	First remarks concerning dynamical aspects .....	25
2.2	Problems of motion in two or three dimensions .....	27
2.2.1	Two-dimensional motion .....	29
2.2.2	Motion in three spatial dimensions .....	36
2.2.3	An example for the determination of trajectories in two space dimensions .....	38
2.3	Vectorial formulation of problems of motion .....	40
2.3.1	Basic concepts .....	41
2.3.2	Vectorial description of motion .....	43
2.3.3	Area theorem .....	48
2.4	Curvilinear coordinates .....	53
2.4.1	Coordinates in the plane .....	53
2.4.2	Spatial coordinates .....	60
<b>3</b>	<b>Dynamics I: Axioms and Conservation Laws</b> .....	<b>67</b>
3.1	The axioms of mechanics .....	67
3.1.1	The concept of force .....	67
3.1.2	Inertial and gravitational mass .....	69
3.1.3	The axioms .....	72
3.1.4	The first axiom: inertial systems .....	72
3.1.5	The second axiom: momentum .....	76
3.1.6	The third axiom: interactions .....	77
3.2	The conservation laws of mechanics .....	84
3.2.1	The momentum principle and momentum conservation	84
3.2.2	The angular momentum principle and angular momen- tum conservation .....	91
3.2.3	Energy and energy conservation for a mass point .....	102
3.2.4	Energy conservation for a system of mass points .....	122

3.2.5	Application: collision problems .....	130
<b>4</b>	<b>Dynamics II: Problems of Motion</b> .....	<b>139</b>
4.1	Kepler's problem .....	139
4.1.1	Preliminaries .....	140
4.1.2	Planetary motion .....	141
4.1.3	Comets and meteorites .....	155
4.2	Oscillator problems .....	160
4.2.1	The mathematical pendulum .....	161
4.2.2	The damped harmonic oscillator .....	169
4.2.3	Forced oscillations: harmonic restoring forces .....	173
4.2.4	Forced oscillations: general excitations .....	180
<b>5</b>	<b>General Formulation of the Mechanics of Point Particles</b> ..	<b>185</b>
5.1	Lagrange I: the Lagrange equations of the first kind .....	186
5.1.1	Examples for the motion under constraints .....	186
5.1.2	Lagrange I for one point particle .....	192
5.2	D'Alembert's principle .....	204
5.2.1	D'Alembert's principle for one mass point .....	204
5.2.2	D'Alembert's principle for systems of point particles ..	209
5.3	The Lagrange equations of the second kind (Lagrange II) ...	214
5.3.1	Lagrange II for one point particle .....	214
5.3.2	Lagrange II and conservation laws for one point particle.	231
5.3.3	Lagrange II for a system of mass points .....	241
5.4	Hamilton's formulation of mechanics .....	246
5.4.1	Hamilton's principle .....	246
5.4.2	Hamilton's equation of motion .....	254
5.4.3	A cursory look into phase space .....	262
<b>6</b>	<b>Application of the Lagrange Formalism</b> .....	<b>271</b>
6.1	Coupled harmonic oscillators .....	271
6.1.1	Coupled oscillating system: two masses and three springs	272
6.1.2	Beats .....	276
6.1.3	The linear oscillator chain .....	278
6.1.4	The differential equation of an oscillating string .....	290
6.2	Rotating coordinate systems .....	294
6.2.1	Simple manifestation of apparent forces .....	295
6.2.2	General discussion of apparent forces in rotating coordi- nate systems .....	297
6.2.3	Apparent forces and the rotating earth .....	305
6.3	The motion of rigid bodies .....	314
6.3.1	Preliminaries .....	315
6.3.2	The kinetic energy of rigid bodies .....	316
6.3.3	The structure of the inertia matrix .....	322
6.3.4	The angular momentum of a rigid body .....	332

6.3.5 The Euler angles ..... 334

6.3.6 The equations of motion for the rotation of a rigid body 337

6.3.7 Rotational motion of rigid bodies ..... 340

**References** ..... 353

**Appendix** ..... 357

**A Biographical data** ..... 359

**B The Greek Alphabet** ..... 365

**C Nomenclature** ..... 367

**D Physical Quantities** ..... 369

**E Some Constants and Astronomical Data** ..... 373

**F Formulae** ..... 377

    F.1 Plane Polar Coordinates ..... 377

    F.2 Cylinder Coordinates ..... 378

    F.3 Spherical Coordinates ..... 378

    F.4 Sum Formulae / Moivre Formula ..... 379

    F.5 Hyperbolic Functions ..... 380

    F.6 Series Expansions ..... 380

    F.7 Approximations ( $\delta$  small) ..... 380

**G Problems on the virtual CD-ROM** ..... 381

**Index** ..... 397
